ABSTRACT

This catalog contains descriptive information on 660 products funded, in whole or in part, by the National Institute of Education (NIE). Purpose of the catalog is (1) to inform educational practitioners, developers, policy-makers, and publishers about a wide range of educational products and (2) to help potential consumers select the most appropriate educational products for their needs. Included are NIE-sponsored products that have been published commercially, as well as those available through noncommercial sources. Approximately two-thirds of the products require no training or technical assistance; in many cases any necessary assistance is available from the product's developers or publishers. The product descriptions are organized into 12 major subject areas, including (1) aesthetic education, (2) basic skills, (3) early childhood education, (4) education and work, (5) educational equity, (6) evaluation, measurement, and needs assessment, (7) finance, productivity, and management, (8) guidance and counseling, (9) information utilization and dissemination, (10) postsecondary education, (11) social education/social science, and (12) teacher education. Six separate indexes list the products by subject, intended user, developer/author, geographic location of developer/author, media, and catalog page number. (Author/JG)

FOREWORD

More than 3 years ago, Congress created the National Institute of Education (NIE) with the mandate to improve American education through research, development, and dissemination activities. *The Catalog of NIE Education Products,* the first of its kind published by NIE, represents the accumulated knowledge of educational researchers and others in the form of education products for use in the Nation's schools, developed at a cost in excess of $100 million.

The *Catalog* was designed to serve a number of audiences. It provides educators at all levels of education with a ready and comprehensive source of information on new tools and methods for improving and facilitating the teaching and learning processes. Members of Congress will be interested in the many quality educational products developed with Federal research and development funds. Parents can become informed on new approaches and diverse methods for educating their children. And publishers can be apprised of the latest products available for publishing and marketing to the education community. However, it is the students of the country who we hope will be the primary beneficiaries of the efforts that went into the development of these products.

NIE is indebted to the many developers and authors who contributed not only the products described in the *Catalog* but also the *Catalog* information about them.

The Institute thus presents this *Catalog* as evidence of progress toward fulfilling its mission and mandate from Congress.

ACKNOWLEDGMENTS

NIE wishes to acknowledge the contributions of the many persons who were involved in the development of this *Catalog*. At the risk of overlooking some, the Institute expresses its special thanks to its contractors and grantees, especially the educational laboratories and centers and ERIC Clearinghouses, who responded so ably and promptly to our request for information on their products. The contractor TEAM Associates, Inc. is credited with having contributed significantly to the design and production of the *Catalog*. Finally, the Institute acknowledges the generous contributions of time and effort by staff within the various NIE units, and especially those in the Dissemination and Resources Group responsible for the *Catalog*.

INTRODUCTION

This is the first *Catalog of NIE Education Products.* It contains descriptive information on 660 products funded, in whole or in part, by the National Institute of Education. The primary purposes of the *Catalog* are twofold: (1) To inform educational practitioners, developers, policymakers, and publishers about a wide range of school-oriented products developed with Federal R&D funds and (2) to provide information to help potential consumers make decisions concerning the most appropriate education products for their needs.

Development of the Catalog

In February 1975 NIE requested all its past and current contractors and grantees to provide information on each product—defined as any tangible outcome from a project which could be used to improve or facilitate the teaching and learning processes—which would be ready for implementation by November 30, 1975. In the guidelines for the preparation of these entries, NIE asked developers to include "limitations, provisos, and unknowns as well as positive information" and to make "assurances and claims" about their products, which they were expected to be able to support with credible evidence. Assurances were to be made that the product, when used as directed, would not affect users negatively, would not perpetuate social biases (such as sexism and racism), and was indeed replicable or transportable. If developers could not make these assurances, they were to specify the negative attributes and, where appropriate, suggest how users could protect themselves against potential hazards. This request for assurances was made in the tradition of Government protection of safety of the individual and fair and equal treatment of all citizens.

In the claims section of each product entry, developers were encouraged to make supportable assertions about the positive attributes of their products. These claims (related to product effectiveness, cost advantages, uniqueness, etc.) extend beyond the minimal assurances with respect to safety, transportability, and social fairness of the product.

Catalog users should note that, because of time and staff constraints, NIE did not verify the product descriptions submitted by the developers. All descriptions were included if they had been received by a specified date and if they addressed the informational elements requested in the guidelines. Thus NIE cannot certify the accuracy, completeness, or objectivity of the developers' statements. There are many other NIE products still in the developmental and testing stages which are not included in this first *Catalog*, and there are no doubt others which were inadvertently omitted. If this *Catalog* is judged useful by consumers, future editions are anticipated that will include additional products and updated information on those in this edition.

Summary Analysis of Catalog Products

The 660 products described in this *Catalog* were developed at a cost of over $100 million. The majority are from the federally sponsored educational laboratories and university-based research and development centers established a decade ago. The remainder were produced by the Educational Resources Information Center (ERIC) Clearinghouses and other developers.

The developers claim that approximately half of these products have undergone small-scale controlled tests of effectiveness, and about half have been revised. One-third claim large-scale replications in a number of sites to confirm that the products are effective, can be used with little difficulty, and work in a variety of settings. These percentages are particularly impressive when one examines information on evaluations of other educational products. For example, testimony before the Select Subcommittee on Education of the Committee on Education and Labor, House of Representatives, in 1971, revealed that only 1 percent of the 400,000 education products currently available have been improved, based on data gathered from the prime users (usually students).

The 13 subject area categories of the 660 products range from aesthetic education for elementary school students to postsecondary education, with a strong emphasis on basic skills, education and work, and educational equity. The costs of the products, indicative of their size and complexity, range from 35 cents for an early childhood mathematics brochure to several hundred dollars for a multimedia set of mathematics materials spanning several grades and classrooms. Approximately two-thirds of the products appear to require no training or technical assistance for their use. In many cases where this training or assistance is needed or desired, it is available from the developers or publishers.

The *Catalog* includes NIE-sponsored products which have been published commercially as well as those which are available from noncommercial sources. Those available from noncommercial sources are usually products intended for a restricted audience for which commercial publishers are unwilling to commit resources. Although all the products in the *Catalog* were scheduled to have been completed by November 30, 1975, distribution arrangements may not have been made in every case. Information on the availability of products may be obtained from the sources identified in the *Catalog.*

Product Selection Criteria

How should one go about selecting an educational product, either from the *Catalog* or another source? In developing guidelines for the product descriptions, NIE tried to anticipate consumer needs for descriptive and analytical summary information to make product screening decisions easier. The items in the *Catalog* descriptions were thus designed to help consumers judge the adequacy of the product according to some general selection criteria.

Before selecting an educational product, a potential consumer might consider the following criteria:

- *Need*–Does the product appear to focus on your needs and desires? Does it address the subject area, goals, and intended users which you have identified as needing help? Does the product conform to your instructional style and your students' learning style? Does it address your desired values?
- *Practicability and availability*–Does the product appear to be practical or useful for you? Will it be available when you need it? Is it sufficiently well documented so that you know what you will be selecting? If auxiliary services, equipment, expertise, or training are needed to use the product as prescribed, will you be able to attain them?
- *Costs* (including initial and continuation costs for materials, equipment, space, time, and personnel)–Can you afford the product? Will the product be used by enough students, enough times to warrant its purchase or rental? Can sharing arrangements reduce high costs?
- *Ease of use*–Is it reasonably easy to implement and maintain quality use of the product? Is it likely to fit in with your organization's constraints? Is it comprehensive or supplementary? Can it be used in part? Can the product be adapted to fit your special needs or constraints?
- *Acceptability to users*–Are teachers, students, administrators, and community members likely to be opposed to this product? Is there likely to be a self-sustaining interest in continuing the product use?
- *Intrinsic quality*–Does the product appear to have sufficiently high intrinsic quality to be worthy of selection? Are the assurances of social fairness (sex, race, age, etc.) adequate for your users? Are the contents sufficiently accurate and up-to-date for the intended users? Does the instructional design meet your standards for quality on use of motivational techniques, statement of objectives, orientation and evaluation components, appropriate sequencing and pacing, etc.? Is the technical quality relating to clarity, intelligibility, or durability of audio, video, print, manipulable, or computer materials acceptable?
- *Product appeal*–Does the product appeal to reviewers? Are the materials creative, artistic, unique? Do users and reviewers indicate that they like the product?
- *Careful product development*–Does it appear that the product was well or carefully made? Was the rationale convincing? Was there a needs assessment or task analysis prior to development? Was the product revised based on feedback from learners, users, and other expert reviewers? Were the developers qualified in development techniques as well as the content area covered?
- *Effectiveness*–Is the product effective in promoting desirable changes? Will it help promote changes which you need or want, skill or performance changes, gains in knowledge, awareness, changes in attitudes? Are these changes sufficiently large and durable? Are there positive byproducts associated with these changes, such as the ability to achieve gains in a shorter time than usual? Will the product cause harm or contribute to changes which may be detrimental? Does the product create or stimulate latent or existing problems?

Prior to making final judgements based on the above criteria, a potential consumer might also want to check the quality of the evidence supporting the developer's claims and make comparisons with other products.

- *Quality of evidence*–Do you suspect that important evidence was omitted? Was the evidence relevant? Were the indicators or instruments reliable and valid? Was the evidence and the way it was collected and reported objective? Does the evidence present a convincing case that the effects caused by or attributed to the product were the result of the product's use, or could they be attributed to other effects, such as the regular education process or normal maturation? Will the product be just as effective in other appropriate situations? Were the samples of product effects examined with sufficient numbers and types of users in typical user locations?
- *Comparisons*–It may also be helpful to compare one product to another or to common alternatives based on multiple criteria. For example, is product X better than your currently used product based on "ease of use," "social fairness," "effectiveness," etc.?

Consumers should remember that the above criteria and appraisal dimensions are just a sample of many that might be used for screening or final selection decisions. They should be prioritized according to one's own needs and desires. In most cases the brief, summary product descriptions in the *Catalog* will be useful primarily for selecting a small group of product alternatives, which then should be reviewed in depth before a final selection decision is made.

Other Sources of Product Information

There are a number of other sources of information on educational products and programs available. Space limitation prevents a complete listing here, but two sources sponsored by the Division of Education, HEW, are:

- Educational Resources Information Center (ERIC), National Institute of Education, Washington, D.C. 20208

  ERIC is a national computerized educational information system which collects, processes, and makes available a wide range of educational documents. NIE will encourage developers of products in the *Catalog* to prepare backup, additional detailed information on these products for inclusion in ERIC. Such information would be summaries of evidence to support the assurances and claims, field test or evaluation reports, development/revision reports, case studies describing how the products were used by specific groups, and lists of user sites. Also included in ERIC are a number of State catalogs of effective programs and practices operating in local schools.

- Joint Dissemination Review Panel (JDRP), Office of Education, Washington, D.C. 20202

  The JDRP, a joint NIE-OE panel, was established to review and judge Division of Education programs and products on evidence of effectiveness. Brief descriptions, including information on program characteristics and adoption criteria, of over 100 programs approved as of July 1975 appear in a publication entitled *Educational Programs That Work*, copies of which are available from NDN Catalog Order Department, Far West Laboratory for Educational Research and Development, 1855 Folsom, San Francisco, California 94103, at $4.95 each.

Catalog User Guidelines

Both the guidelines for product description entries and the *Catalog* itself are designed to facilitate access to the information on educational products contained within these covers. The *Catalog* is divided into 12 major subject areas, three of which have been further subdivided: Basic Skills, Education and Work, and Educational Equity. In each of these areas, subheadings are treated as separate subject areas in themselves so that there are 22 separate subject areas throughout the two volumes of the *Catalog*.

The *Catalog* includes a subject overview—a broad state of the art review—for each of the fields addressed. Each overview was prepared by a distinguished practitioner/researcher or NIE program specialist chosen for his or her familiarity with the area under review. In most cases NIE program specialists reviewed the overview and added additional information regarding NIE-sponsored products relevant to the field. The resulting overviews serve as introductions to the subject areas of the *Catalog*. The Institute does not necessarily endorse the views expressed in these overviews, nor should Institute policy be inferred from authors' suggestions for future research and development activities.

The guidelines developed for product descriptions were designed with the educational practitioner, as potential consumer, in mind. All product descriptions conform to a standardized format to provide uniformity of access to product information. Product descriptions were edited *only* for Government Printing Office style and conformity to the suggested product description guidelines. Developers were encouraged to include photographs and line drawings to supplement the narrative descriptions. They submitted information under the following standardized headings:

- NIE Product Title
- Developer/Author
- Narrative Description of Product
- Subject Area(s)
- Intended Users and Beneficiaries
- Goal(s) or Purpose(s) (learning outcomes)
- Patterns of Use
- Assessment Provisions
- Time Requirements
- Implementation Procedures
- Materials and Equipment
- Assurances and Claims
- Availability

Individual products within each subject area are generally sequenced by type according to the following categorizations:

- Curriculum
  - . . Student type
  - . . Computer assisted
  - . . Self-instructional
- Measurement and Assessment
- Management
- Training
- Resources

There are cases, however, where individual products could be classified in more than one category; they are sequenced according to editorial discretion. In other cases, descriptions of products comprising a comprehensive curriculum package are grouped together.

There are six indexes located at the end of volume 2 which provide easy access to product information. These indexes categorize the 66 products by:

- Subject
- User[1]
- Developer/Author
- Geographic Location of Authors/Developers
- Media
- Product Page

Products in the first five indexes are indexed by a six-digit RD number which was assigned to each product description numerically within a subject category. Within each index the RD number is displayed at the end of and immediately below the product title. It relates to the RD number of a product description which appears in the upper left- and right-hand corners of facing pages in the *Catalog*, beneath the subject heading. The Media Index differs slightly in format in that it presents product information in chart form. The last index—the Product Page Index—lists products, under subject categories, by page numbers. This arrangement, therefore, offers *Catalog* users easy reference to individual product descriptions through either RD- or page-referenced numbers.

---

[1] For the index a "user" is defined as either the target recipient or implementer of a product. Products in this index are listed multiply in each applicable user category. Separate user categories are listed in the index introduction.

The following chart shows the subject areas in the *Catalog* by volume number, RD number range, and page range:

VOLUME 1

SUBJECT AREA	RD NO. RANGE	PAGE RANGE
Aesthetic Education	010 001-010 044	11 to 138
Basic Skills		
Mathematics and Science	020 001-020 039	145 to 249
Reading and Language Arts	030 001-030 041	253 to 357
Reasoning and Problem Solving	040 001-040 018	363 to 407
Early Childhood Education	050 001-050 069	415 to 550
Education and Work (Career Education)		
Administration and Staff Development	060 001-060 029	559 to 611
Career Awareness and Exploration	070 001-070 027	613 to 667
Career Counseling	080 001-080 032	669 to 733
Work Experience-Based Programs	090 001-090 010	735 to 760

VOLUME 2

SUBJECT AREA	RD NO. RANGE	PAGE RANGE
Educational Equity		
Handicapped	100 001-100 014	765 to 783
Multicultural Bilingual	110 001-110 059	787 to 939
Sex Fairness	120 001-120 009	943 to 959
Evaluation, Measurement and Needs Assessment	130 001-130 044	967 to 1056
Finance, Productivity and Management	140 001-140 053	1061 to 1174
Guidance and Counseling	150 001-150 011	1179 to 1190
Information Utilization and Dissemination	160 001-160 024	1195 to 1240

AESTHETIC
EDUCATION

OVERVIEW

MARTIN ENGEL
National Institute of Education
Washington, D.C.

There is a quiet revolution going on in education which is expanding the artistic and aesthetic character and content of basic education. Until recently, most Americans experienced art in their education as a peripheral and isolated activity. Intellectually, the schools have regarded the arts as entertaining rather than as fundamental to human understanding. However, basic changes in this attitude are now being effected.

Historically, the arts enjoyed a brief flowering in the schools during the 1930's, when progressive education emphasized individual, creative, and expressive behavior. World War II and the Sputnik era restored the narrow view of the academic disciplines. The recent advocacy of an enhanced "quality of life" for every American alluded only to economic and material quality, not aesthetic quality. During the 1960's, however, the arts again began to catch the attention of the education community, in conjunction with developmental psychology and humanization of education generally that is, with social and personal, as well as aesthetic growth. In other words, education refocused its sights upon the development of the whole person, not only academic skills. It is this renaissance which, in the characteristic time lag of the cultural shift within the schools, is only now beginning to permeate the education community.

The teaching of the arts in the schools

Until the last decade, the creative and artistic efforts of most children were encouraged and rewarded until they reached a certain age. Early in their schooling, when it was time to "get serious," the adult world then began demanding preparation for job and work, and an end to play and fun. Home and school, which had encouraged art and other creative production, reversed their emphasis. The importance of the body was replaced with the importance of the "mind" or head. Henceforth, perhaps around the first or second grade, artistic and idiosyncratic expression came to be regarded as detrimental to the development of behaviors appropriate to adult life. From that time on in the educational life of every youngster, the curriculum relegated the arts to a peripheral role, such as the art or music teacher visiting once a week.

Nevertheless, the arts are being taught in the schools, and the profession has been organized for some time. About 98 percent of all junior high schools and 90 percent of all senior high schools offer some activity in the field of music, such as a weekly class period, participation in the orchestra, or instrument instruction. However, only 14 percent of all junior and senior high schools require any music for graduation. Thus, while the arts, in one form or another, have indeed been offered as educational experiences in the schools, that experience until now has simply not been taken seriously. More importantly, this indicates that, while the visual arts and music are available, only enough is available for a small percentage of the student population. It is probable that when students demand more art, it will not be available, and student demand will reflect, if not exceed, the changing demands of society. The arts have been the sole "affective" component of the curriculum, and the affective domain has rarely been agreed upon as an important responsibility of the schools. But times are changing. The direction of their change is the topic of this overview.

Dr. Martin Engel is the Special Adviser for the Arts and Humanities at the National Institute of Education, Washington, D.C.

Arts and Aesthetic Education

The basic terminology of aesthetic education includes a number of frequently used and confused terms and phrases which need to be defined. Art or the arts includes the visual arts, such as two-dimensional art (e.g., painting and graphics) and three-dimensional art (e.g., sculpture and ceramics); architecture; music; dance; literature; drama and theater; and film. Art education has traditionally referred to courses and educational programs only in the visual arts, as distinct from music education. Emphasis has been upon "artsy-craftsy" manipulation of materials—that is, the technology of production, or "how-to," rather than upon aesthetic or qualitative perception and judgment of works of art. Arts education or education in the arts has attempted to integrate the several art media and espoused interdisciplinary classroom content, meeting with resistance from the specialist teachers in the various media. The stronger theoretical/conceptual basis for curriculums is still centered upon traditional art media, rather than upon aesthetic perception which ranges far beyond the arts. Aesthetic education, a generic term, incorporates all of the arts as the most concentrated form of aesthetic expression and perception within a single philosophic system. Stress is upon the teaching of the arts from an experiential basis rather than a production-oriented method.

One of the most pervasive problems, apparent in this list of terms, is the isolation of the arts, one from the other, as well as the arts from other disciplines. Also, the various representatives of the different arts are vying for territorial dominance in the battle of methodologies as well as content, all within the educational setting. The visual arts professionals have, until very recently, ignored the music educators, and vice versa, or have fought them over crumbs of the school budget. The teachers of performance and craftsmanship have regarded with contempt the theoreticians and teachers who stress perceptual experience. The emergence of the concepts of arts education and aesthetic education indicates that the several arts are coming together, both conceptually and operationally, within coordinated educational programs and that a balance is being struck among performance, appreciation, and knowledge.

The Federal role

One of the earliest efforts to research and develop the teaching of the arts in the schools emerged in 1965 with the establishment of the Arts and Humanities Program within the U.S. Office of Education's (USOE) Bureau of Research. The Government thereby made an introductory commitment to the importance of the arts in the schools. Federal support for research and development in the arts provided a legitimacy for art educators previously accorded only to the sciences and science education.

The second most influential role that the Federal Government played in implementing a renewed interest in art education was the inclusion of titles I and III in the 1965 Elementary and Secondary Education Act (ESEA). Funds were channeled directly to the local school systems for special programs for disadvantaged students. However, rather than systematic educational efforts, these programs consisted of isolated exposure to performances and one-time, out-of-school "cultural" trips. The 1970 evaluation of title I indicated that such random exposure had little lasting educational value, and subsequently all arts activities were sharply reduced, thereby eliminating even the few effective ones.

By 1970, Federal support for the arts in the schools had diminished. Other priorities displaced the arts within the constraints of shrinking budgets and rising costs. This brief summary of the Federal role is by no means complete, however. Some Government watchers believe that the U.S. Office of Education Arts and Humanities Program was established only as an interim program, anticipating the creation of the National Endowment for the Arts and the National Endowment for the Humanities in 1965. As the two endowments began to stand on their own feet, funding for the Arts and Humanities Program in USOE diminished and finally, in 1970, disappeared. The point of this is that the two national endowments, free of any educational research and development obligations, excluded any systematic commitment to art education in the schools. The Endowment for the Humanities stresses postsecondary curriculums in its education division, while the Endowment for the Arts targets its resources on the performing arts, art practice outside the schools, and support for artists who "visit" and work in the schools for limited periods of time.

With certain exceptions, the Federal commitment to art education has fallen between two chairs. The Office of Education came to assume that the arts were now the business of the endowments, while the endowments were reluctant to infringe upon the educational territory which properly belonged to the Office of Education.

Between 1969 and 1972, a large amount of money was transferred to the two endowments. The Arts Endowment put the funds into a program called "Arts in Schools." Through the administration of the States' arts councils, this massive program supports the employment of practicing professionals in all the arts to spend from a few weeks to an entire school year as artists-in-residence in a school. Recently (1974) the Emergency School Aid Act of the Office of Education has awarded $1 million to arts activities in a number of States to be applied to education. Unfortunately, these massive educational experiments do not provide a systematic rationale or pedagogical design for a sustained program of aesthetic education.

The National Institute of Education role

In 1972, the National Institute of Education inherited the curriculum development programs of the educational laboratories and centers from the Bureau of Research of the Office of Education. Among these was the Aesthetic Education Program developed at CEMREL (formerly the Central Midwestern Region Educational Laboratory), a regional educational laboratory in St. Louis, Missouri.

Launched in the spirit of the massive curriculum development projects in the sciences during the 1960's, this new curriculum in aesthetic education is intended for kindergarten through seventh grade, and general classroom rather than the once-a-week arts specialist activity. It stresses aesthetic perception in all facets of human experience, especially the arts, rather than only manual dexterity, or crafts-skills, or historical knowledge in any one medium. Committed to the learning-by-doing pedagogy, the developers borrowed from the educational philosophy of Piaget, and the aesthetic education theories of Lowenfeld and Herbert Read, and the ideas of Broudy, Barkan, and others.

This program includes a variety of materials. For example, the program *Aesthetics in the Physical World*, for kindergarten and first grade, provides instructional packages to serve as an introduction to the fundamental elements of perception, such as light, sound, and motion. Fundamentals underlying aesthetic phenomena are explored in activities which encourage students to become involved in such activities as creating their own spaces or examining the function of light and vision by experiencing them in playground games. Packages in this group provide an introduction to and a unification of the aesthetic dimension of the arts in the environment. The *Aesthetic and Art Elements* packages encourage students to recognize elements of aesthetic phenomena, such as textures in music, shape in the visual arts, and movement in the environment. Students using this group of packages learn to identify elements in the examples presented and to recognize them as a part of the arts, and relate them to the structure of a work of art. The *Aesthetic and Creative Process* packages emphasize students taking elements of the arts and the environment and creatively transforming them into a whole work. Creating a characterization, constructing a dramatic plot, relating sounds and movement, creating word pictures–these are among the activities in which the students originate their own ideas and make their own structures for the creative process.

Other materials include the *Aesthetics and the Artists* packages which explore several questions: Who are the people that make works of art? Why do they do it? Where do they get their ideas? Students see how the artist takes an idea, works with art elements, and organizes them into objects and performances. The student also creates his or her own art works, participating in activities which are analogous to processes the artist uses. The *Aesthetics and the Culture* materials promote student exploration of the relationships between aesthetics and culture. Each package provides a unique point of view which will increase the student's understanding of the aesthetic elements utilized by various cultures. Through a series of activities, students are encouraged to form ideas on the human creative expressions; on how those expressions are generated by individuals and groups and shaped by their interaction with the culture; and on how aesthetic values and forms are similar or different in various cultures for a variety of reasons. Since aesthetics play a major role in the affective quality of the environment, the materials *Aesthetics and the Environment* permit students to understand the effects of technology on the environment, examine personal interactive modes in public spaces of today, imagine future environments, and consider the interrelatedness of functional and aesthetic concerns.

In addition to these curriculum packages, CEMREL is developing curriculums for both preservice and inservice teacher training, as well as a series of sites - teacher centers or learning centers - which serve as focuses for aesthetic education training for teachers, information and instructional resources that are themselves examples of an aesthetic environment. The intent is not only to create content packages, but also to assure their effective utilization within the general classroom setting.

Also within the domain of elementary school curriculum development, the Southwest Regional Education Laboratory (SWRL) of Los Alamitos, California, is developing two major curriculum packages in art and music:

1. The SWRL Art Program is designed to provide an alternative to the teaching practices common in many elementary classrooms (K through 6). The curriculum provides a holistic approach introducing the various skills and perspectives of the artist, critic, and art historian to the student.
2. The SWRL Music Program enables pupils to develop their musical skills and appreciation in a variety of learning situations. Teachers with little or no music experience are able to conduct all program activities.

NIE is also continuing support for a basic research program that was launched originally with funds from the Arts and Humanities Program in 1970. *Project Zero*, at the Harvard Graduate School of Education, focuses upon a rigorous and systematic effort to ascertain the nature of the creative art process during the actual making of a work of art, either poem or picture. The effort seeks to yield a knowledge base from which a pedagogical theory can be constructed, predicated upon the premise that creative skills can be taught and learned.

NIE has committed itself to supporting a relatively comprehensive program in arts and aesthetic education. Basic research is being done at Indiana University and Harvard University. Curriculum development is being conducted at two regional laboratories (SWRL and CEMREL) for well over one million dollars each year. CEMREL is conducting massive preservice and inservice training programs in aesthetic education for teachers. Many of CEMREL's packages are being published and distributed by a commercial publisher. The Career Education Division of NIE has also supported research and curriculum development in the arts as one of a number of careers through a consortium of Ohio State University and local school systems.

A broader role for the arts

In spite of growing demand, the "arts" are still not the real business of the schools. The problem is twofold: Extrinsically, the arts and aesthetic experiences are devaluated in a culture that is vitalized by materialistic, economic, technocratic, and bureaucratic values. Intrinsically, art education lacks a comprehensive knowledge and theory base, a generally acceptable pedagogy, and suffers from vague, confused, and unclear goals.

However, the importance of aesthetic education has been widely discussed. E. Paul Torrance, one of the leading educational scholars of creativity (e.g., the Torrance Test of Creative Thinking, 1966), has studied the characteristics of gifted children outside the middle-class, dominant culture population—that is, among disadvantaged, minority, and ethnically different children. His search led him to believe that a definition of the talented and gifted was too narrow. His thesis was to no longer insist on identifying and cultivating only those kinds of talent that the dominant affluent culture values. On the basis of his research, Torrance concluded that certain characteristics for successful educational intervention with the disadvantaged and culturally diverse are essential, including the use of the arts in supplying motivation and as a medium for developing important skills, concepts, and subject matter competencies (*Teacher Record*, May 1974, p. 471).

Torrance's work seems to confirm the work of Alfredo Castaneda of Stanford who has demonstrated that the culturally diverse perceive and construct their reality in rather different ways. He contends that the ethnically different, such as Mexican Americans or inner-city blacks, perceive their world in nondiscrete, nonlinear, nonabstract ways. Rather, their personal paradigm is integral pictographic, dramatic, humane, personalized, context dependent, and highly charged with emotion and fantasy. Although it is possible to overstate this dichotomy, nonetheless both Torrance and Castaneda make telling arguments for a far more extensive research development program through the vehicle of the arts and aesthetic perception in an educational context.

The need for research and development

The number of problems available to those wishing to implement effective aesthetic education experiences in the public schools is nearly limitless. From basic research, theory, and knowledge building on the one hand, to implementation and evaluation of ongoing activities on the other hand, every step is a pioneering one. There does not yet exist a theory of learning and development in the aesthetic domain paralleling Piaget's intellectual-development theories.

The need for research and development can be summarized by citing the following major categories as they might apply to education in the arts and aesthetic education:

1. Learning processes—How does the individual learn aesthetic perception? How does one learn to create, to intuit, and to imagine? How does one measure such learning?
2. Content and curriculum—What is the most appropriate content for education in the arts and for aesthetic education? How does one distinguish among various student groups, considering age, socioeconomic, and ethnic/cultural variables?

   How much content should be aimed at the "head" and how much at the "hands"? Should all the arts constitute the curriculum including manipulative skills in all the arts, or can the student be expected to generalize from an intimate working experience in only one medium? Should interdisciplinary approaches with the concomitant risk of superficiality replace the individual art disciplines, with their parochial limitations? Should aesthetic education be equal to, in emphasis and importance, mathematical/logical thinking *and* verbal-arts training? Should arts and aesthetic content be prepackaged, as are other curriculums in the sciences, reading, and mathematics, or is that a contradiction in terms? How can the effectiveness of curriculum in aesthetic education be measured apart from its delivery?
3. Teacher training—Is good taste, a sense of beauty, sensitivity, and connoisseurship learnable, or is it an inborn trait? If it is learnable, is it teachable? If teachable, can teachers be taught to teach it? If it is learnable, and teachable, and if teachers can be taught to teach it, then how can teachers be motivated and prepared to teach such subjective and expressive disciplines? What is effective teaching of creativity and aesthetic perception? Is aesthetic perception and creativity necessary to teach it?

Finally, and most practically, how does aesthetic education penetrate the school? How will it be financed in the face of declining school populations, increased vocationalism, and shrinking budgets? What is the administrator's role? It is not that research must be expected to generate definitive answers to these questions. Rather, the debates, disagreements, and premises for educational practice ought simply to be much better informed than they are now. The language of theory in the arts and aesthetic education ought to become more precise, clear, and meaningful. In order to pursue such research and development, it is necessary to create information networks to create locales and pools of intense commitment and effort, and to seek out schools and school systems where the "ground is already fertile."

INTRODUCTION TO LIGHT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package to introduce kindergarten and primary grade students to light as a basic phenomenon

One of Aesthetics in the Physical World Series of *Five Sense Store* packages, this package introduces students to light as a basic phenomenon in the environment, one which can contribute to aesthetic experiences either naturally or through the expression of an artist. The purpose of *Introduction to Light* is to introduce kindergarten and primary grade students to both natural and artificial light as a phenomenon which engages them to see. The students will learn about the physical properties of light—intensity, direction, and color—and how these properties affect the appearance of things and personal feelings about them. Various experiences will acquaint them with the relationships between light and seeing, hearing and touching. The phenomenon of shadow will also be investigated. The students will [illegible] light and shadow can be used to communicate ideas and feelings. They will find, too, that light with its properties has aesthetic potential—it affects our emotions and artists use it in their work. Finally, *Introduction to Light* provides students with opportunities to use light creatively in exploring this aesthetic potential.

Sample Lesson

(Addressed to Teachers)

Lesson 12: Creating a Light Environment

General Description: Students work with basic properties of light in creating an environment of their own choosing.

Procedure: Explain to the students what is going to happen. Discuss with them the fact that all of you together are going to create a house or a place with cardboard boxes, and that it will be a house that uses light to make it interesting.

Get one of your largest boxes and show it to the students. Place it with the open side down in front of them. Ask them to imagine how it must look inside at this moment—light? dark? how dark? scary? happy? Now suggest to them that each box is going to be like a room in a house. Ask what should be done to get light into the rooms. (Cut windows and doors.)

"If we want a little light, how many windows should we make? How big should they be?"

"What if we want a lot of light?"

"What if we wanted to feel scary? happy?"

Depending on the number and age of your students, assign one box to two or more students. Provide them with a crayon or marker to indicate where windows will go and give each group or child a specific assignment:

"Will you make a room that is very bright and happy?"

"Would you make one that has light coming in from only one side?"

"And you, one that has light coming from three sides?"

"And you, one that has only red and blue light coming in?"

Let the students work at marking where each opening will go. Then if they are very young you will have to make the openings for them in order to avoid accidents.

As your students are working, point out that people who design real buildings—architects—think about the amount of light needed in those buildings, just as they are doing. For example, architects know it's nice to have a kitchen that's sunlit and cheery; so they will try to put as many windows as possible in a kitchen that they design. On the other hand, architects also know that a movie theater can have no outside light; so they try to design a windowless building that can be lit by artificial light alone and still seem pleasant.

You might want to join some of the boxes together by making doors, and keep others separate to specify different light conditions. Students may wish to decorate their boxes on the outside with paints and on the inside with things they like or that might go with the particular lighting involved. Consider leaving this environment in your classroom for some time and using it as a place students may use for quiet activities or for reading (in the well-lit ones).

RD 010 001

SUBJECT AREA(S)

The subject area is Aesthetics in the Physical World; visual arts and explores light as a natural and artificial phenomenon; the physical properties of light—intensity, direction, and color; how these properties affect the appearance of things and the way people feel about them; the phenomenon of shadow; communicative and creative potential of light and shadow.

INTENDED USERS AND BENEFICIARIES

Introduction to Light was designed for and formally tested with kindergarten and 1st-grade students.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are for students: (1) To become aware of light as both a natural and an artificial phenomenon which enables them to see, (2) to learn that light has certain basic properties which affect the appearance of things, (3) to learn that light and shadow can be used to communicate ideas and feelings, and (4) to become aware that light has aesthetic potential.

PATTERNS OF USE

Introduction to Light is a self-contained instructional package. It may be used as part of an ongoing curriculum in art; and linked with other AEP units which deal with sound, space, and motion and which are clustered around "Aesthetics in the Physical World."

ASSESSMENT PROVISIONS

Learning is assessed by the teacher. Guidelines for evaluating student performance and oral responses are interspersed throughout the teacher's guide.

TIME REQUIREMENTS

The 12 lessons in this package require 7 to 8 hours to complete. The lessons take varying amounts of time from 20 minutes to 1 hour.

IMPLEMENTATION PROCEDURES

Introduction to Light does not require a specialist teacher. It is adaptable for use by small groups or a large group of students. A large, clear floor space is needed for several of the activities so that desks will have to be moved around. The teacher's guide outlines all procedures in detail. The materials, now in the final stage of production, will be attractive and durable. Consumables are minimal and are easily purchased from the publisher.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops will be offered by the publisher, and curriculum consultation will be available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in three separate classrooms of varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States, using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out ~~an~~ observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early learning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the package on a yearly basis.

The prepublication evaluation of this package was carried out with kindergarten students in three local schools. The majority of the students tested on a performance-oriented student interview were able to do the following tasks: use light to communicate; make use of the expressive potential of shadow; correctly identify that the positioning of the light source was the reason for the differences in appearance of three photographs of the same subject and indicate the probable position of the light source for each; and manipulate one or more of the light properties emphasized in the package (i.e., intensity, direction, and color) to achieve a specific effect. Student and teacher satisfaction with the package ranged from positive to extremely positive as measured by posttreatment questionnaires and interviews.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:				
Eye masks Colored acetate rectangles Wet acetate Reusable slide mounts	1 set per 6 students	Not determined		
Teacher materials:				
Sound filmstrip Plastic tray Teacher's guide		Not determined

INTRODUCTION TO MOTION (PART OF THE AESTHETIC EDUCATION PROGRAM)

A learning package for young children focusing on functional and aesthetic aspects of motion

The Aesthetics in the Physical World series of the Aesthetic Education Program (AEP) includes this instructional package, which deals with motion as a basic phenomenon in the environment. This package focuses on both the functional and the aesthetic aspects of motion. The kindergarten to 1st-grade students work with a slide/tape presentation of these aspects of motion and explore their own bodies to discover potential for movement. The students gain awareness through observation and exploration of movement and through individual ability to use movement functionally and aesthetically. The students also experience works of art—visual art, literature, music, and dance—in which movement is important to the artist's expression of a thought, feeling, or idea. In this way, the students become familiar with how movement may be used aesthetically.

This package encourages students: (1) To investigate their own bodies to see how many ways they can move; (2) to explore their everyday world for moving things, observing how these things move both similarly to and differently from their own bodies; (3) to explore areas more distant than their home and classroom for movement—examine the city and the country and think about how the seasons affect movement; and (4) to experience movement in the subject matter or media of a variety of art works—paintings, musical compositions, and literature.

SUBJECT AREA(S)

The subject area is Aesthetics in the Physical World: Dance, visual art, and sensory perception.

Subject matter includes awareness of the ubiquitous nature of movement in the environment; awareness of the human body's potential for movement; and awareness that movement is used as subject matter and/or through the elements (such as texture, color, rhythm) in the expression of thoughts, feelings, and ideas in works of art.

INTENDED USERS AND BENEFICIARIES

Introduction to Motion, still in the design state, is being prepared for kindergarten and 1st-grade students.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to teach students: (1) That movement is a basic phenomenon in their environment and their own bodies; and (2) that movement can be used by artists in their art works to express thoughts, feelings, and ideas.

PATTERNS OF USE

Introduction to Motion will be a self-contained unit of instruction with activities that are cumulative. It may be used as part of an ongoing curriculum in dance, linked with other AEP units which are related to basic phenomena in the physical world and clustered around Aesthetics in the Physical World, and used with science programs.

ASSESSMENT PROVISIONS

Assessment for the learning activities will be designed during development of the instructional unit.

TIME REQUIREMENTS

Introduction to Motion is planned to take approximately 10 hours to complete, depending on class size and utilization of suggested "additional activities." Teachers will probably want to devote about 30 minutes per day every day for 2 or 3 days per week to the materials.

IMPLEMENTATION PROCEDURES

Introduction to Motion does not require a specialist teacher. It may be taught in small groups or with a whole class. Students will require a large clear space for moving. The teacher's guide will outline all procedures for the teacher.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this unit of instruction.

ASSURANCES AND CLAIMS

Introduction to Motion is presently in development. When completed, it will be tested as defined in the *Basic Program Plan* (CEMREL, 1972). At that time, appropriate assurances and claims will be made.

RD 010 003

INTRODUCTION TO SOUND (PART OF THE AESTHETIC EDUCATION PROGRAM)

Materials for students in kindergarten and the primary grades to help them become aware of sounds in their everyday environment

One of the Aesthetics in the Physical World series of the *Five Sense Store* package, *Introduction to Sound*, helps students in kindergarten and the primary grades realize that sound is a basic phenomenon in the environment and that sound can contribute to aesthetic experiences, either naturally or through the expression of an artist. The students will be introduced to sound as a phenomenon inherent in many objects in their environment. They will find that every sound has a basic quality—literally, the "sound" of the sound—and the characteristic elements of duration, intensity, and pitch (a sound's own ranges of high to low and loud to soft and the length of time it lasts or can be heard). *Introduction to Sound* is intended to bring to the students' attention the multitude of sounds in their everyday surroundings and to make them aware of the potential of these sounds as musical expression.

In this set of materials, students work with imagined and real sounds and have opportunities to organize and manipulate these. In this way, students do much the same thing that a composer does when first imagining how a musical idea will sound when performed by the chosen instruments. Using their voices, as well as genuine sound-producing objects to imitate sounds, students see how they can vary sound by manipulating its elements—duration, intensity, and pitch; how they can organize sounds into different patterns; and how they can perform their compositions. They tape-record some of their work so that they can analyze it for possible change and improvement.

By working with sounds with which they are already familiar and comfortable—a dog's bark, the roar of a car's engine—students begin to understand the possibilities of sound, sound from the farthest reach of the imagination to sound falling within the traditional range of the symphony orchestra. This approach is meant to stimulate an initial confidence in the students about creating with sound, a confidence that can lead them into more complex modes of understanding and expression of this phenomenon. The approach is based on the premise that when individuals use all their senses to create, imagine, or organize sounds, those sounds take on special significance. It is this special significance—a personal meaning—which should reinforce the students' motivation to work with sound and to appreciate others' work with sound.

Sample Lesson

(Addressed to Teachers)

Lesson 3: Changing Sounds by Manipulating Duration, Intensity, and Pitch

Concept: A sound can be altered by manipulating one or more of its basic elements.

General Objective: The students will be able to alter sounds by manipulating duration, intensity, and pitch simultaneously.

Procedure: Discuss the activity with the students in the following manner:

"The last time we worked with this board, we chose these sound cards and we placed element cards underneath them. Today we will continue to choose element cards. But instead of placing one element card under each of the sounds, we will choose one sound and put element cards underneath it until we have one duration card, one intensity card, and one pitch card under that sound."

Explain to the students the following rules for working with element cards:

"You will pick one card for each element and place these under one of the sounds on the board. Only one of each element should be placed under each sound card. If you choose a pitch card but you already have a pitch card, then you will have to put the second one back on the stack. We will go through all of the elements for one sound before working with several sounds plus elements."

Now shuffle the element cards and put them in one pile, face down. Choose one of the sounds to work with, and ask someone to pick the first element card. Have that student put it under the sound. After each card is chosen and placed in the column under the sound, tell the students to make the sound as they think it would sound when modified by that element plus any other elements under that sound card. As before, students may use their voices or any objects around them to make the sounds. Remember that each card affects the original sound in some way. How much or how little depends on the students and you. The important thing is to see that the original sound is, in fact, altered by each element card so that the final sound is the product of all the cards.

Help the students concentrate on the changes they are making. Urge them to explore those changes until they have arrived at what they feel is the best sound of the sound when altered by all the elements.

After completing a single sound, choose elements for several more sounds. Each time a card is drawn, have the students work only on the sound under which that card is placed. Once the students can remember the new quality, have them sound off the whole board, from left to right, with special attention to the new one.

Tape-record the experience for playback and discussion.

SUBJECT AREA(S)

The subject area is Aesthetics in the Physical World: Music.

Subject matter includes introduction of sound as a phenomenon inherent in many objects in the environment, basic qualities of sound, and organization and manipulation of real and imagined sounds.

INTENDED USERS AND BENEFICIARIES

Introduction to Sound was designed for use by kindergarten and 1st-grade students.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are for students: (1) To become aware that sound is a basic phenomenon in the environment; (2) to learn that sound can contribute to aesthetic experiences, either naturally or through the expression of an artist; and (3) to become aware of the multitude of sounds in their everyday surroundings and of the potential of these sounds as musical expression.

PATTERNS OF USE

Introduction to Sound is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in music or linked with other Aesthetic Education Program packages which deal with motion, light, and space, and which are clustered around Aesthetics in the Physical World.

ASSESSMENT PROVISIONS

While there is no formal testing, learning is assessed by teacher and student. Student performance and oral response are assessed. Guidelines for teacher evaluation are written in the teacher's guide.

TIME REQUIREMENTS

Introduction to Sound takes a minimum of 7 hours to complete. Additional discussion or repetition of parts of the lessons can lengthen this time. The 11 lessons require from 20 minutes to 1 hour to do.

IMPLEMENTATION PROCEDURES

Introduction to Sound does not require a specialist teacher. The lessons may be done with a small group or with a whole class. The teacher's guide carefully outlines all procedures.

The teacher is encouraged to let students expand their exploration of sounds and sound composition.

The materials in *Introduction to Sound* are in the final prepublication stage of design and will be extremely durable. There are no consumable items in this package.

Summary Cost Information

The amount of teacher materials needed for this package will not vary with the number of students being taught.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in music can implement this instructional package. Workshops will be offered by the publisher, and curriculum consultation will be available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

RD 010 003

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information about the utilization of the published version of the packages on a yearly basis.

The prepublication evaluation of this package was carried out with kindergarten and 1st-grade students in local schools. The results of specially constructed tests indicate that although students who had received instruction based on the package and those who had not were equally able to distinguish the dynamic level of sounds, students exposed to the package were better able to discriminate sounds of different pitch and duration, and to perceive silence. Package groups were able to perform also at, or above, the criterion level on a task involving rhythm.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:

INTRODUCTION TO SPACE (PART OF THE AESTHETIC EDUCATION PROGRAM)

An introduction for young children to what space is and how it is used in the environment

Introduction to Space, part of the Aesthetics in the Physical World group of the *Five Sense Store*, helps students become aware of spatial considerations in the world at large.

Through a filmstrip presentation, the students are made aware of what space is and how it is used in the environment.

The students also explore the spatial elements of height, width, and depth; the visual cues to degrees of distance in space; and the difference between two-dimensional and three-dimensional spaces.

The students also become familiar with some principal considerations in using and manipulating space. Through special manipulatives and activities, they explore the relationship between a space of a specific size or shape and the number of given objects which can fill that space. They explore how the properties of a space limit the amount and kinds of movement within it.

The students use their classroom as a laboratory for making decisions about the use of space. As they redesign their classroom, they draw on the functional and aesthetic considerations they have been exposed to throughout *Introduction to Space*.

Sample Lesson

(Addressed to Teachers)

Lesson 2

General Description: Through this experience the students will increase their ability to identify spaces and relate spaces to specific functions.

Procedure: Introduce the students to a space-function guessing game. Use the questions below as a beginning, and then add your own. (The students will have viewed the introductory sound filmstrip in the previous lesson.)

Give the students these instructions. I will name the thing that takes up a space or the thing that happens there. Then you see if you can give me the name of that space. Let me give you an example. If I say a space for airplanes, what would you say? (Airport is a possible response.) Now, if I say a writing space, what would you say? (Table, desk, and chalkboard are possible responses.) Yes, we could write on any of those spaces, couldn't we?

Let's try some more. What if I said a car space? What would that mean? (Something like a parking lot is a possible response.) Running space? (Sidewalk, gym, and playground are possible responses.) Sleeping space? (Bed is a possible response.) Cereal space? (Bowl is a possible response.) Teeth space? (Mouth is a possible response.) Monkey space? (Cage, zoo, and jungle are possible responses.) Cooking space? (Stove and pot are possible responses.) Boat space? (River, lake, and water are possible responses.)

Are we in a space now? What kind of space are we in? (Yes, a gym, classroom (or wherever you are) are possible responses.)

Be sure that the responses given by the students name a space which fits the object of function described. However, make allowances for whimsical responses typical of young children, and expect to get different answers which may be suitable for the same question. Include both two-dimensional and three-dimensional space-function exemplars in your game.

When you have concluded the game, lead the students in considering the general nature of space. Have students give their own definitions of space. Ask: "So, now what do you think a space is?"

Be satisfied with very general responses. Typical answers given by 5-, 6-, and 7-year-old children may be: "an empty place," "where things are," "where the planets are," "it's every place," "inside my shoe," "space to run (for example, to fly or walk)," "I have a space at home." Further exposure to the set of materials will add to the students' understanding of space.

You may want to try a variation of this game by allowing one student or a group of students to give the space-function clues to the rest of the children.

RD 010 004

SUBJECT AREA(S)

The subject area is Aesthetics in the Physical World: Visual art/sensory perception.

Space is a basic phenomenon of the environment which can be manipulated for functional and aesthetic purposes. Fixed spaces can be recognized and described by their shapes and sizes. Distance from an object plays a major role in the perception of that object. As an object recedes from the viewer, it seems smaller, loses detail, and may be partially covered by nearer objects. Three-dimensional space has width, height, and depth. Two-dimensional space has height and width, but no appreciable depth, although it may give the illusion of depth, as in a photograph. The size and shape of a given space determine the number and arrangement of the objects which can fit within it. Likewise, the size and shape of the objects determine the number and arrangement which can fit within a given space. People can make and affect decisions about their use of space both in their daily lives and in works of art.

INTENDED USERS AND BENEFICIARIES

The package was tested at the kindergarten and 1st-grade levels, but test results indicate that the package may be more appropriate at the 1st-grade, rather than the kindergarten level. Informal reports indicate that 2d and 3d graders could use the package as well.

GOAL(S) OR PURPOSE(S)

The purpose of this package is: (1) To introduce students to space as a phenomenon and to involve them in working with its elements of height, width, and depth; (2) to develop an awareness of functional and aesthetic considerations relating to space; and (3) to involve the students in creative problem solving related to the functional and aesthetic uses of space.

PATTERNS OF USE

Introduction to Space is a self-contained set of materials with activities that are sequential and cumulative. It may be linked with the rest of the packages in the Aesthetics in the Physical World group; used in connection with other Aesthetic Education Program packages in which space plays a part, such as movement, environment, and theater packages; used to develop gross motor skills and fine visual perception skills; and used in relation to an elementary physical science program.

ASSESSMENT PROVISIONS

Informal assessment provisions are interspersed throughout the activities. Learning is assessed by teacher and student. Guidelines to aid the teacher in assessing student performance are built into the package.

TIME REQUIREMENTS

Introduction to Space requires 12-15 hours to complete, depending on class size and utilization of additional activities. Activities vary in length from 15 minutes to 1 hour.

IMPLEMENTATION PROCEDURES

Introduction to Space does not require a specialist teacher. The package was tested with kindergarten and 1st-grade children, but may be used with any primary level students. The activities are designed for use either by a large or small group of students, and the active participation of the teacher is greatly encouraged. Results from classrooms which tested the materials showed that groups in which the teachers were willing to give suggestions and to direct activities had much more success than those in which the teacher functioned only as an observer.

Many of the activities require extensive movement and need a large area of clear space. The teacher's guide carefully outlines all procedures.

Additional activities encourage the teacher to carry the concepts beyond the completion of the package.

Summary Cost Information

The materials needed for this package are the same regardless of the number of students being taught. Cost for one complete unit is not yet available.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher and CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in three separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher, and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on utilization of published materials.

The pilot evaluation of this package was carried out with kindergarten and 1st-grade students in local schools. A specially constructed interview was developed to assess the outcomes of instruction with the package. Students using the package scored significantly higher statistically than control group students on the conceptual segment of the interview. In doing this, they demonstrated a heightened awareness of space in their environment and a greater breadth of concept regarding the nature of space. Student and teacher satisfaction with the package was moderate, as measured in questionnaires and interviews administered after completion of the package.

DRAMATIC CONFLICT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package to enable students in grades 1-3 to explore major elements of structuring a plot

One of the aesthetic elements of theater is dramatic structure. The ability to perceive any portion of this structure increases the sensitivity of the student as a spectator. One Aesthetic Education Program package, *Constructing Dramatic Plot*, enables students to explore major elements of structuring a plot: Character, setting, incident, conflict, crisis, and resolution. Another package, *Creating Characterization*, focuses on physical and vocal expression of emotions as major structural elements of drama.

This package, *Dramatic Conflict*, one of the Aesthetics and Arts Elements series of *Five Sense Store* packages, emphasizes one pivotal element in dramatic structure—conflict. Dramatic conflict is the interaction between a character and some force which is a potential obstacle to the character's achieving what is wanted and/or needed. The major concern of these lessons is that students perceive how conflict formation takes place. They will demonstrate this perception through the sorting of cards, discussion, storytelling, and improvisation.

Sample Lesson

(Addressed to Teachers)

Lesson 13: Creating a Simple Story With a Conflict

In this activity, students will work in pairs. They will use the card deck and the conflict story board to make up a simple story with a conflict.

One student should select a character card and a goal card. Place the cards in holders and the appropriate space on the board. The second student should choose a card that could cause a conflict and place that card in a holder. Each pair of students will work together to make up a story with a conflict. The first student starts making up and telling a story while slowly moving along the "story line" toward the goal. At some point in the story, the second student enters the story line to create the conflict, i.e., tries to stop the first character from reaching the goal. The students must decide whether the first character can get by the conflict and achieve the goal or whether the goal is prevented from being achieved. Thus, the students continue until their story is completed.

During this time, the teacher can circulate among the students to see whether they are utilizing the elements appropriately. If an impasse occurs in solving the conflict, the teacher should help the students out of their dilemma by asking leading questions.

Once the students are satisfied with their stories, the teacher can lead a "tour through story land." The "tour" can be conducted by leading the whole class from story board to story board. As the "tour" stops at each board, the appropriate students move their cards and tell the "tour group" their story. After the "tour" is completed, discuss the different conflicts that were presented when the stories were told.

The amount of time necessary for this activity should be decided by the teacher, depending upon the interest of the students.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Theater arts.

Subject areas include introduction of the terms "conflict," "goal," and "character"; interrelation of these three elements in a dramatic structure; and creation of stories which contain these elements.

INTENDED USERS AND BENEFICIARIES

Dramatic Conflict was designed for use by students in the 1st grade. It can be used successfully with 2d- and 3d-grade students as well.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to help students identify, describe, and manipulate major elements of dramatic conflict formation.

PATTERNS OF USE

Dramatic Conflict is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in drama; linked with other theater-based packages developed by the Aesthetic Education Program to create a curriculum; or linked with AEP packages which are related to music, art, dance, and literature and which are clustered around aesthetics and arts elements.

ASSESSMENT PROVISIONS

While there are no formal tests, teachers and students evaluate learning through analysis of student oral response and student activities. Guidelines for assessment are in the teacher's guide.

TIME REQUIREMENTS

The lessons in *Dramatic Conflict* require approximately 10 hours to complete.

IMPLEMENTATION PROCEDURES

Dramatic Conflict does not require a specialist teacher. The package is designed as a whole-class activity with students working individually and in pairs. When working individually, the students may work at their desks. When students work in pairs, they will need more room to spread out their materials and do their improvisations. The teacher's guide outlines all procedures.

The materials in *Dramatic Conflict* are now in the final prepublication stage, and their durability is being based on information received from testing situations. Consumables will be minimal and will be purchased from the publisher.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in drama can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information about the utilization of the published version of the packages on a yearly basis.

Students from a variety of socioeconomic levels who were taught the pilot version of the package scored significantly higher on a test which asked them to identify the major concepts of the package (goal, main character, source of conflict) than did untreated students. Student and teacher satisfaction was high, as indicated by postpackage questionnaires.

MOVEMENT (PART OF THE AESTHETIC EDUCATION PROGRAM)

Materials to introduce 3d-grade students to movement and its expressive elements

One of the Aesthetics and Arts Elements series of the *Five Sense Store* packages, this set of materials introduces students to movement as a phenomenon that pervades our own lives and almost all environments. The elements of movement, which give it form, are space, time, and force. Its aesthetic qualities become obvious when movement functions as a medium of expression through the manipulation of these elements.

The expressive potential of movement is extensive. It can be used in symbols and gestures representative of ideas, events, or feelings. For instance, the way one walks or stands may reveal feelings and thoughts, just as the way a dancer moves conveys a particular feeling. Movement can also be appreciated for its own innate qualities and forms. That is, movement can be appreciated simply as movement, as being expressive in its own right, not as an expression of something else—movement for movement's sake, so to speak. Such a variety of expressive potential has found its way into many art forms, such as kinetic sculpture, film, dance, and pantomime.

The purpose of this movement package is to develop an awareness of movement in general and of its expressive elements in particular. Through the manipulation of these same elements, movement can be employed as an expressive medium for art. This newly developed awareness will heighten students' perceptions of and responses to art work and to natural environmental occurences that involve movement as an expressive force.

To reach this goal, the students will explore and manipulate selected properties of space, time, and force via human movement. The students' own body movements serve as the tool with which they will experience, perceive, and respond throughout this package. Besides being a mode already familiar to young children, it provides a natural liaison with two of the art forms in which movement is used aesthetically—dance and drama. Although this is not geared to be a "dance" package, the students will have the extra benefit of manipulating, exploring, and improvising in their creative problem solving through the use of movement. The process, as well as the content, therefore, should provide the student with a better understanding, or at least awareness, of the aesthetic dimension of movement in the performing arts, theater, and dance.

Sample Lesson

(Addressed to Teachers)

Lesson 13: Manipulating the Elements of Movement for Expression

General Description: The students will shape movements of their own and vary their expressive effects by manipulating the elements.

Background: This last activity attempts to integrate the ideas in the package into a meaningful experience. Here the students will discover that all of the elements are operating at all times in any movement and that changing any one element will affect the total movement. Thus, the previous exposure to simplify the nature of movement (energy in space during time is now carried to a beginning awareness of form (interrelationship and organization of the elements). While the package ends with this activity, the students' thinking is, hopefully, opened up and stimulated for future experiences.

Procedure: Have the students each find an empty space to work in. Direct them to make a movement that uses their head and one leg. Give them a few minutes to practice it so that it is defined and set.

Encourage them as they practice to find something on their own which is special to them and not a copy of their neighbor's movement.

When they all seem to be ready, tell them to do the same movement, but change the timing in some way. "Try to take longer or shorter; try it very fast or very slow. Which is best for your movement?"

Next, have them go back to their original movements before timing change. Say, "Now change the space it takes to do it in."

Again, have them return to their original movement. "Now change the energy you use to do your movement. Try it jerky, smooth, sharp, relaxed."

Give them time to explore and be slightly frustrated until they discover a solution for each change. You may help those who are having great difficulty by suggesting a variation for them to try.

Repeat this process with a new movement including the back, one arm, and one foot.

Finally, set the task. Tell the students to find a movement that uses their whole body, practice it until it is just right; and then change it three times–change the timing, then change the space, then change the energy.

Suggest that they practice all their changes until they feel ready to show them to a friend. After they demonstrate their movement, have them watch their friend's movement. They should tell one another if they can see the change in space and then in timing and in energy. If not, they should work on it more until it's clear and then show it again. If some students seem unable to work alone, suggest that they work with a partner or in a small group of three.

If some students want to demonstrate their work to everyone else, by all means allow it. But do not force performance. Premature performance can produce self-consciousness and inhibit creativity. It is always best to have students demonstrate in groups of three or four at a time.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Dance.

Expressive potential of movement; familiarity with and manipulation of the elements of movement—space, time, and force—integration of elements of movement into an aesthetic form.

INTENDED USERS AND BENEFICIARIES

Movement was designed for and formally tested with students in the 3d grade. At the discretion of the teacher, it would be suitable for 4th-grade students as well.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are to enable students: (1) To become aware of movement as a phenomenon that pervades our lives; (2) to become familiar with, and to be able to manipulate, the expressive elements of movement; and (3) to become aware that through the manipulation of these same elements, movement can be employed as an expressive medium for art.

PATTERNS OF USE

Movement is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in dance, or linked with other AEP packages which are related to music, art, drama, and literature and which are clustered around "Aesthetics and Arts Elements."

ASSESSMENT PROVISIONS

One diagnostic activity is included with the materials, and it is for pretest/posttest use only. Throughout the activities student learning is assessed by both teacher and students. Appropriate guidelines for assessment are built into the teacher's guide.

TIME REQUIREMENTS

The lessons in *Movement* require approximately 12 hours to complete. The teacher is advised to spend no more than 40 minutes at a time on any one lesson.

IMPLEMENTATION PROCEDURES

Movement does not require a specialist teacher. It can be taught to small groups or large groups of students. All of the lessons require a large, clear floor area for movement explorations. The teacher's guide outlines all procedures for the teacher and has been rated as quite useful in testing situations.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in dance can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States, using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the packages on a yearly basis.

The pilot evaluation of this package was carried out with 3d-grade students in local schools. One diagnostic test having two major components (verbal and visual) was constructed for the evaluation of this package, focusing upon the more important outcomes of package instruction. The tests were administered in the classrooms which participated in pilot trial and in an equal number of control-group classrooms. When students who had taken the full unit were compared with control-group students, those instructed with the unit earned higher scores on each of the two components. The score differences in favor of students who used the materials were statistically significant. Student performance on this test supports a claim for product effectiveness. The product cultivates in students a realization that through manipulation of these elements—space, time, and force—movement can be employed as an expression medium for art.

NONVERBAL COMMUNICATION (PART OF THE AESTHETIC EDUCATION PROGRAM)

A set of materials which introduces primary students to nonverbal communications in their environment and in the theater

This set of materials, one of the Aesthetics and Arts Elements series of the *Five Sense Store* packages, introduces primary students to nonverbal communication both in their immediate environment and in the theater.

Much of theater is not conversational, but action or mood expressed in movement and vocal qualities. This is a theater package; hence, one of the goals of the package is to help students become more appreciative of how nonverbal communication is used as an element in the total theatrical process. However, unless the students can begin to interpret their immediate environment, including their own use of nonverbal communication, they will not be able to appreciate the subtleties of a theater experience, either as performers or as audience members.

The instructional materials in this package will expose students to a wide variety of nonverbal communication, help them decode or understand what is being "said" nonverbally, and give them the opportunity to experiment with encoding or enacting nonverbal communication.

To reach the package's goals, students participate in 10 activities involving various stimulus materials. A face board and transparent overlays of eyebrows and mouths in various positions allow students to experiment with these most mobile facial features and to perceive how these features convey emotions. To help them imitate the expressions they create on the face board and to aid in exploring the expressive potential of their own faces, the students use a metal hand mirror. A tape recording activity allows them to tell "emotion stories" explaining the faces which they have created on the face boards. A recorded activity song affords them an opportunity to manipulate their faces and bodies expressively. A 6-minute film, showing students the use of nonverbal communication in a theatrical setting and contrasting that usage with the daily use of nonverbal communication, extends the concept of nonverbal communication to include posture, movement, body relationship to another, and the expressive ability of hands. Another stimulus material is a recording which asks the students to identify various nonverbal vocal cues. Both student and teacher answer booklets are used in conjunction with the record. The flipbook facilitates the students' ability to look beyond stereotypes in decoding communication from clothing and hand objects carried by a person and to more fully understand the communication potential of costumes. Dressing in costumes collected by the class allows the students the opportunity to manipulate the visual nonverbal communication of clothing and hand properties and to begin to "try out" various roles suggested by the costumes. Finally, the students are asked to improvise a short skit using the nonverbal cues of costume, facial expressions, body movement, and body positioning in relation to another.

Through the use of the materials in this package, not only will students be receiving exposure to basic elements of theater, but, perhaps more important at this stage in their development, they should begin to become more effective and creative communicators in their daily lives, both as "senders" of messages and as "receivers" of messages.

Sample Lesson

(Addressed to Teachers)

Lesson 3: The Voice in Nonverbal Communication

Concept: Vocal qualities can communicate emotions, age, and ideas.

Background: Lesson 3 exposes the student to the concept that feelings are communicated by how the message is spoken. The student listens to incongruent verbal and vocal speeches. Verbal and nonverbal codes usually complement each other; however, both children and adults frequently find themselves receiving two messages simultaneously. When the two channels, verbal and vocal, provide conflicting cues, interpersonal

> understanding depends upon the priorities assigned by the communicator and receiver to the channels. For the child to gain an understanding of the psychological state of an actor or a communicator, formal, rational, and verbal communications are often of less value than the nonrational, nonverbal communications.
>
> Following exposure to incongruent verbal and vocal communication, the child listens to several speeches wherein the verbal content has been treated by an electronic filter making it difficult to understand. The child tries to identify the emotional content of each treated speech. This is possible because feelings are communicated, at least in part, by the form of a spoken message and because there are relatively stereotyped form/feeling correlations.
>
> Another part of the tape exposes the child to the concept that vocal qualities express more than emotional states. The student listens to an old man speaking and to a young girl speaking and then considers how the voice can communicate age. Next, the child discovers how vocal qualities can be used to enhance the communicative value of words. The tape asks the student to say words in such a way that the idea or connotation of words is relayed to the listener via vocal quality.

In the theater and in our daily lives, we are exposed to a wide variety of nonverbal vocal cues. If, early in their lives, children begin to attend to the information available in nonverbal vocal cues, they will become more effective communicators in their personal lives and more appreciative participants in theater experiences.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Theater Arts

Exploration of the communicative potential of the human face; exploration of communicative potential of posture, movement, and the body; exploration of nonverbal vocal communication; how clothing and hand properties communicate nonverbally; how such communication is used aesthetically in theater.

INTENDED USERS AND BENEFICIARIES

Nonverbal Communication was designed for and formally tested with 1st-grade students. It can successfully be used with 2d-, 3d-, and 4th-graders, as well.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to enable students: (1) To decode and encode various nonverbal stimuli or cues which communicate emotions, ideas, moods, and roles or conditions-in-life; (2) to perceive the function of nonverbal communication in their daily lives and in theatrical contexts; and (3) to use nonverbal communication consciously for creative purposes.

PATTERNS OF USE

Nonverbal Communication is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in drama or linked with other Aesthetic Education Program (AEP) packages which are related to music, art, dance, and literature and which are clustered around Aesthetics and Arts Elements.

ASSESSMENT PROVISIONS

While there are no formal tests, the teacher is provided with checklists for assessing student learning by observing their behavior on package tasks. In addition, the teacher's guide contains samples of appropriate and inappropriate student responses.

TIME REQUIREMENTS

The lessons in *Nonverbal Communication* require approximately 8 to 10 hours to complete.

IMPLEMENTATION PROCEDURES

Nonverbal Communication does not require a specialist teacher. Instructions are adaptable for small or large groups. Students work individually or in pairs through most of the lessons.

The materials in this package are now in prototype stage. They are being designed to be as durable as possible. Based on information received from testing situations, the materials in final form will be very durable.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second pilot-stage, evaluation is carried out in three classrooms. In this stage the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials.

Despite the fact that there were administrative difficulties with the test sites (one classroom was eliminated because of a teachers' strike midway into the teaching of the package; in another, because of the team-teaching arrangement, the students originally using the package were reassigned and other students took their place), in one classroom all students indicated they "enjoyed" the package. A specially constructed test asked students, after receiving instruction, to respond to an emotion with an appropriate nonverbal communication. The evaluator scored student responses on a pass-fail basis. In two classrooms, the majority of students were able to show an emotion through facial expression, posture, body movement, gesture, and body placement.

PART AND WHOLE (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package designed to introduce students in grades K-2 to part and whole as a pervasive relationship in their lives

The Aesthetics and Arts Elements series of the *Five Sense Store* packages includes this set of materials which is designed to introduce kindergarten and 1st-grade students to part and whole as a pervasive relationship in their lives and environment, especially in people-created works of art. Working with their text, *Part and Whole*, and puzzles, photographs, and story cards, students find that a whole is made up of parts. Then they see that some wholes are also parts and some parts are also wholes. Finally, they explore the concept that introducing different parts into a whole can create a new whole or can give them a different feeling. *Part and Whole* is fundamental to the other packages in the Aesthetics and Arts Elements series. It presents the abstract organizing principle upon which the others are based. Thus, after working through this package, students can understand more easily how elements of natural occurrences or art works contribute to a pleasurable experience with the whole.

Sample Lesson

(Addressed to Teachers)

Lesson 3: Parts and Wholes in Pictures

General Description: The students each draw a picture of something their family does together. They examine their own drawings and learn that they use some of the same parts (elements) when they draw a picture that artists use when they create an art work. Through arranging shapes and lines from a painting included in their text books, the students see that people use certain elements to create a whole idea in an art work whether the idea expressed is realistic or abstract.

Procedure: Ask the students to draw a picture about something their family does together. Discuss with them which kinds of things these might be (e.g., sharing meals, taking a trip, watching television).

After they have completed their pictures, ask the students specific questions, e.g., "Which parts (shapes, lines, and colors) did you use to draw the people and things in your picture?"

This is the most important part of the activity. Compare the students' pictures to the three paintings on pages 22 and 23 of their book: "Did you use the same parts in your pictures that the artist used?" (Yes, for example, they used shapes for the people and things and color and lines for the grass.)

You may want to do this in small groups by having the students put up their pictures and talk about all of them.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Visual art, music, and sensory development.

A whole is made up of parts; a part of a whole can in itself be a whole; the whole (work of art) may change by rearranging or changing the nature of individual parts.

INTENDED USERS AND BENEFICIARIES

Part and Whole was designed for and formally tested with kindergarten and 1st-grade students.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is: (1) To develop students' ability to respond to the parts and the organization of parts in perceiving a whole work of art, (2) to develop perception of how parts function together in determining the whole, and (3) to develop awareness of the artist's behavior in selecting and arranging parts to create whole works of art.

PATTERNS OF USE

Part and Whole is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in art, music, drama, or dance; linked with other AEP packages which are related to art, music, drama, dance, and literature and which are clustered around aesthetics and arts elements; used with sensory development curriculums; or used with language development programs.

ASSESSMENT PROVISIONS

Informal provisions are made for assessment of student learning in the package. Informal guidelines for assessment are built into the teacher's guide.

TIME REQUIREMENTS

Part and Whole takes approximately 10 hours to complete. The lessons can be done in 18 class sessions of about 30 minutes each.

IMPLEMENTATION PROCEDURES

Part and Whole does not require a specialist teacher. It is recommended that the students work in pairs and that they be seated on the floor when using the study cards and doing some of the other activities. The teacher's guide carefully outlines all procedures and has been rated as useful in field trials.

The package encourages the teacher to help students focus on parts and wholes in their environment and in works of art.

Part and Whole is not yet in final form. Therefore, an accurate statement about the durability of the materials cannot be made.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in five separate classrooms of varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information about the utilization of the published version of the package on a yearly basis.

The pilot evaluation of this package was carried out with grades K-1 students in local schools. Specially constructed tests indicate that students who receive package instruction were better able to perceive, to a moderate degree, parts of works of art in relation to the whole work than students who were not taught the package. Students who received package instruction also evidenced a greater gain in figure-ground perception than students who were not taught the package. Student and teacher satisfaction with the package was high, as measured by posttreatment questionnaires and interviews.

INFORMATION CURRENT AS OF MARCH 1975 ■

RHYTHM/METER
(PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which helps students in grades 2-4 to become familiar with rhythm and meter in music

The second group of primary packages, Aesthetics and Arts Elements, includes this title, through which students become familiar with rhythm and meter in music and in other arts areas and the environment. A set of activity cards structure experiences with rhythm in visual pattern, in sounds, and in movement. A teacher's guide and a two-record set of musical selections are tools for investigating meter in music—the students listen and identify meters. The selections, ranging from classical and electronic music to folk songs, are supported by charts, recording sheets, and a series of posttests.

The Meter portion of the package focuses the students' attention on one element of musical composition, meter, and its relationship to a whole musical composition. After participating in the nine Meter lessons explained in the teacher's guide, the students will know that Meter is an important element in the composition of music. The goal of the three groups of *Rhythm/Meter* activity cards is to help the students extend the concepts in the Meter materials to other areas in their environment: They will experience pulse or beat in movement, discover and create visual patterns, and find rhythm in sounds and language.

Through the *Rhythm/Meter* activities, the students will find that rhythm is order in the movement all around them. The students can observe rhythm in the basic cycles and movements of their bodies, in patterns they see every day, and in sounds they hear. For example, they can feel a steady swing to their arms as they walk; they can observe the regularity of evenly spaced lampposts on a city street or of bricks in a house; and they can notice the sounds of heavy traffic pausing for a red traffic light and flowing at the green light. They see that rhythm is everywhere and that it is both natural and people-created.

Sample Lesson

(Addressed to Teachers)

Rhythm in Visual Pattern

New Patterns in Animals

Concept: Patterns help people identify objects, and objects take on a new appearance when the pattern is changed.

Objective: The students will know what a pattern is and recognize patterns in their environment. They will also be aware that if the pattern of something is changed, that thing will take on a new appearance.

Procedure: Review the nature of pattern with the students. Have the students investigate the classroom and their own clothes to find examples of patterns. Then ask them to name all the animals they can think of that have patterns (turtle, zebra, snake, and leopard). Point out to the students that they know these animals partly by their patterns.

Next, have the students use crayons to draw on the construction or butcher paper, simple outlines, without details, of their favorite animal in the zoo. Have them cut these out and lay them on the patterned side of the wallpaper or wrapping paper. (if they use the wrong side of the paper, the patterned animal will be backward for the next step of this activity.) Ask them to outline their animal. Then have them cut out the patterned-paper animal and paste it to the original. The animal suddenly has a new pattern.

Display the patterns in such a way as to create the feeling of a jungle or a zoo without bars. The students may want to add exotic trees, and so forth, for effect. Discuss with them how the new patterns give a new image to the animals.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Music, visual art, and dance.

Meter and its relationship to a whole musical composition; occurrence of visual pattern in the environment; order, shape similarity, and repetition as elements of visual pattern; rhythm as order in movement; interrelationship of rhythm in sound and movement; pattern formed by rhythm in sounds.

RD 010 009

INTENDED USERS AND BENEFICIARIES

Rhythm/Meter was designed for and tested with 2d-, 3d-, and 4th-grade students.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to enable students: (1) To know that meter is an important element in the composition of music; (2) to recognize and execute simple meters; (3) to learn some basic musical terms; and (4) to extend the concept of meter in music to other areas in their environment—visual pattern, movement, and sound.

PATTERNS OF USE

Rhythm/Meter is a self-contained instructional package. It may be used as part of an ongoing curriculum in music, dance, or visual art, or linked with other AEP units which are related to music, dance, visual art, drama, and literature, and which are clustered around "Aesthetics and Arts Elements."

ASSESSMENT PROVISIONS

Three student response sheets are employed as an integral part of the meter lessons. Four tests are included with the materials and are suggested for pretest/posttest or posttest-only use. Throughout the activities, student learning is assessed by both teacher and students. Appropriate guidelines for assessment are built into the teacher's guide.

TIME REQUIREMENTS

Rhythm/Meter takes approximately 12 hours to complete. The meter porition of the package requires about 3 hours and the rhythm activities take from 6 to 9 hours, depending upon how many the teacher chooses to do.

IMPLEMENTATION PROCEDURES

Rhythm/Meter does not require a specialist teacher. It can be taught in large or small groups. A large, clear space is needed for the movement activities and some of the sound activities.

Field reports indicate that the materials stand up well with repeated use. Consumables are minimal and can be easily purchased from the publisher.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented without aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the packages on a yearly basis.

The prepublication evaluation of this package was carried out with 2d- and 3d-grade students in local schools. Six tests were constructed for the evaluation of this package, focusing upon the more important outcomes of package instruction. The tests were administered in the classrooms which participated in pilot trial and in an equal number of control-group classrooms. When students who had taken the full unit were compared with control-group students, those instructed with the unit earned higher scores on each of the six tests. In each of the six tests, the score differences in favor of students who used the materials were statistically significant. Student performance on these tests supports a claim for product effectiveness. The product cultivates in students a heightened awareness of meter as one element of musical composition, and it extends this awareness to the concept of rhythm in sound, visual pattern, and movement.

RD 010 010

SETTING AND ENVIRONMENT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package for 2d graders and older students which focuses on the interactive nature of people and their environment

This package, part of the Aesthetics and Arts Elements group of the *Five Sense Store,* focuses on the interactive nature of people and their environment. Its intent is to attune students to how setting or environment affects human beings and whether this effect comes from natural surroundings, such as rivers, mountains, and forests; or from settings created by people, such as homes, furniture, schools; or from the set of a drama.

One purpose of this package is to prepare students to deal with the concept of setting as it is thought of in the theater. To appreciate theater aesthetically involves appreciating a number of dramatic elements, one of these being setting. Before dealing with this concept in its special relationship to theater, young students need to perceive the influence and importance of setting, or environment, in their daily lives. *Setting and Environment* is devoted to developing this perception.

Creating and fostering a sensitivity to our environment are of paramount importance in heightening feelings of personal responsibility toward our surroundings. It is a prime intent of this package to contribute toward such a sensitivity.

While experiencing the package materials, the students actually perform the function of both playwright and scene designer. The students are asked to express their affective reactions to changes made in their immediate environment and are given the opportunity to manipulate elements (physical objects, space, light, color, and sound) within a setting to create certain effects and to solve given design problems. The students become aware of how setting influences behavior. The package promotes individual awareness and aesthetic perception and helps students to become responsible for their natural and people-created environments.

Sample Lesson

(Addressed to Teachers)

Lesson 3

Concept: Settings can influence the way a person feels and behaves. By changing the elements within a setting, one can create feeling and behavior changes in the people who will be relating to that setting.

Objective: Through a filmstrip, the students will perceive a small boy's changes in feeling and behavior due to the manipulation of elements in his setting. They will also see the boy functioning sometimes as doer and sometimes as perceiver.

Procedure: This activity involves showing the filmstrip "Behavior Settings," in which one small boy's behavior changes as he experiences setting changes. During the filmstrip presentation, the teacher will need to allow time for student pantomimes of activities possible in each setting and time to discuss briefly the boy's behavior in each setting.

Each time a setting is projected without a child, the students should take turns improvising how they would act in the setting, using the setting as stimulus. For each frame, first ask for verbal responses to what the child would feel like doing in that setting. Then ask the child to pretend to be in that setting and to pantomime the activity. Emphasize nonverbal improvisation.

Keep the improvisations relatively short. Do not expect polished performances; instead, look for a willingness to participate and a freeing of children's expressive abilities.

Emphasis should be made that there is no right or wrong behavior for any of the settings in the filmstrip. The children should be encouraged to do what they feel like doing; they should be allowed to work in pairs if they wish to do so.

Before the filmstrip begins, explain:

"Now we will be looking at pictures which show how one small boy's behavior—what is felt, what is done— changes as the boy experiences different settings. The same room is used in every setting, but it is changed each time by adding different objects to it. First you will see each setting, and then you will see the boy in the setting."

Begin the filmstrip. The following questions will help in discussing the young boy's behavior in each setting and in drawing the students' reactions to each setting:

Frame 1: (A bare room)

Teacher: "How would you feel if you were in this room—happy, lonely, or bored? What would you do if you were in this room?"

While this frame is still on the screen, ask for volunteers to pantomime what they would do in the room.

Frame 2: (Boy standing in corner)

Teacher: "Here is what the boy felt like doing."

(The lesson continues with the rest of the filmstrip.)

SUBJECT AREA(S)

Aesthetics and the Arts Elements: Theater.

Every person stands in relationship to many settings. Settings are made up of light, sound, color, space, and furniture. When people design settings, they manipulate these elements. The planners of settings must also keep in mind the people who will be functioning in that setting, both the doers (actors or constructors) and the perceivers (audience).

Settings can influence the way a person feels and behaves. By changing the elements within a setting, one can create feeling and behavior changes in the people who will be relating to that setting.

In theater settings, all the elements and behavior are controlled. Theater settings are artificial settings rather than actual, even though some appear real (true-to-life) and others appear imaginary.

INTENDED USERS AND BENEFICIARIES

Although this package was designed for and tested at the 2d- or 3d-grade level, it may be used with older students as well.

GOALS(S) OR PURPOSE(S)

The goals of this package are to help students: (1) To acquire an understanding of the term "setting"; (2) to learn that setting is made up of the elements of sound, light, color, space, and furniture; (3) to realize the importance of doers (constructors) and perceivers (audience) in relationship to setting; (4) to observe and experience how setting affects feelings and behavior; and (5) to gain an understanding of theater settings as artificial settings in which the elements, feelings and behavior, and doers and perceivers are controlled. This is unlike real settings in which all of the above are not always predictable.

PATTERNS OF USE

This package is a self-contained set of materials. It may be used as part of an ongoing curriculum in theater, linked with other Aesthetic Education Program units which are related to theater and environment, and used in connection with the other packages in the Aesthetics and Arts Elements group.

ASSESSMENT PROVISIONS

While there are no formal tests, learning is assessed by teacher and student. Guidelines for assessing student performance and oral response are built into the package.

TIME REQUIREMENTS

The package requires approximately 15 hours to complete, depending on class size and utilization of suggested additional activities. Teachers generally devote 1 hour per day for 2-1/2 to 3 weeks.

IMPLEMENTATION PROCEDURES

This package does not require a specialist teacher. The package has been tested with students in grades 2 and 3, but may be used with older children as well. The activities are designed both for individualized experiences and group experiences and are to be teacher led.

Many of the activities will require rearrangement of the classroom and extensive movement.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this unit of instruction. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

AESTHETIC EDUCATION

RD 010 010

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: first, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information about the utilization of the published version of the package on a yearly basis.

The prepublication evaluation of this package was carried out with 2d-grade students in local schools. A test was constructed for the evaluation of this package, focusing upon the more important outcomes of package instruction. The test was administered in the classrooms which participated in the pilot trial and in an equal number of control-group classrooms. When students who had taken the full unit were compared with control-group students, those instructed with the unit earned higher scores on the test. The score differences in favor of students who used the materials were statistically significant. Student performance on this test supports a claim for product effectiveness. The product cultivates in students a simulated imagination with regard to their environment.

RD 010 011

SHAPE (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which introduces primary grade students to basic concepts of shape

This package, part of the Aesthetics and Arts Elements group of the *Five Sense Store* materials, introduces students to concepts basic to a further exploration of shapes. The *Things About Shapes* book introduces package concepts and supplies instructions for the activities. Students discover that shapes are everywhere, that shapes are things and things have shape, that shapes are sometimes found inside other shapes, and that shapes put together make bigger shapes. In addition to working with *Things About Shapes*, students and teachers search the classroom and the outside environment for examples of package concepts; the students explore their new information about shapes in their own drawings; and they cut shapes from worksheets included with the package and arrange these to discover how small shapes can be combined to form larger shapes.

This package will encourage students: (1) To become aware that all things in our surroundings have shape and that shapes can be categorized—they will recognize that while the outline of a thing is often considered its total shape, the inside, the outside, texture, color, volume, and size are also aspects of shape; (2) to recognize shapes in different visual frames of reference—shapes within other shapes—and to be able to identify geometric shapes, biomorphic shapes, or combinations; and (3) to create shape compositions, which help them to perceive simple and complex visual relationships.

Sample Lesson

(Addressed to Teachers)

Lesson 2

Concept: Some shapes are inside other shapes.

Objective: By observation, the students recognize shapes in different visual frames of reference—shapes within other shapes—and are able to identify geometric shapes, biomorphic shapes, or combinations.

Procedure: The students will locate and discuss shapes inside other shapes from their immediate environment.

This lesson is an introduction to one aspect of the idea that complex shapes can usually be looked at as a grouping of smaller shapes. Being able to perceive and point out parts in larger wholes is a skill that allows young students to deal with complicated visual compositions without confusion or frustration. This same skill has wide applicability in dealing with other kinds of wholes—hearing the melody part, or picking out the number of tone colors in a musical work, for example, increases understanding of the whole work of music; or noting how an actor uses parts of the body in theatrical characterization—voice, face, arms, and hands—can make a complex series of events more understandable and meaningful to an informed audience member. This activity will help students deal more knowledgeably with a part-of-the-whole visual phenomena—shape.

Use the following questions to have the students demonstrate their understanding of the concept that shapes may be found inside other shapes.

"Look at your shoes. Can you find a shape inside other shapes?

"Look at the room. Can you find shapes inside other shapes?

"Can you find a shape inside of a shape inside of a shape?"

Consider using this exercise as a basis for group discussion so that you can tell whether the students can, in fact, perceive shapes inside other shapes.

Examples of shapes inside of shapes can be found in the student's booklet, *Things About Shapes*.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Visual Art

An infinite variety of shapes exists in the environment. Some shapes exist within other shapes, and some complex shapes are made up of smaller shapes. In combination with the other two shape packages (*Shape Relationships* and *Shapes and Patterns*), the visual elements of shape, color, texture, size, volume, and dimension are explored.

INTENDED USERS AND BENEFICIARIES

Shape is designed for students at the primary grade level.

AESTHETIC EDUCATION

RD 010 011

GOAL(S) OR PURPOSE(S)

The purpose of this package is: (1) To establish the relationship between an art element, shape, and the whole visual work; (2) to sharpen the students' abilities to perceive both simple and complex shapes; (3) to help students visualize the interrelationship between shape and other aspects of visual phenomena; and (4) to lead students to make aesthetic judgments about visual phenomena both in the environment and in the visual arts.

PATTERNS OF USE

Shape is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing elementary art curriculum, taught as a unit with the other two shape packages (*Shape Relationships* and *Shapes and Patterns*), linked with the other Aesthetic Education Program units in the Aesthetics and Arts Elements group, or used to develop basic sensory perception skills.

ASSESSMENT PROVISIONS

While there are no formal tests, teacher and students are involved in assessing learning by analyzing student oral responses and student products. Guidelines for evaluation are contained in the teacher's guide.

TIME REQUIREMENTS

Shape requires approximately 15 hours to complete, depending upon the number of students a teacher has and whether students are divided into groups when working with the package. The various activities within the package require from 30 minutes to 1 hour to complete.

IMPLEMENTATION PROCEDURES

Shape does not require a specialist teacher. The package has been tested with students in the 2d grade, but it may be used with younger and older students at the discretion of the teacher. There are various possibilities for structuring the activities in this package. The student books were written to be almost totally self-instructional for students, but most sections will benefit from added information by the teacher. The teacher may instruct the whole group on what to do and then allow smaller groups to work at various times, or may let individual students or small groups to work at various times, or may let individual students or small groups work independently with the materials.

Summary Cost Information

Packages can be purchased in varying multiples of 6, for example, 12-student, 18-student, or 24-student sets. Student and teacher materials can be purchased separately, so that only one set of teacher materials need be purchased with two, three, four, or five student sets. Cost of one complete unit containing enough materials for one teacher and six students is $31.45.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The package was tested with 2d-grade students in local public schools from a variety of socioeconomic levels. One of the activities in the package was used as a test of students' achievement of package objectives. This activity presented a variety of shapes which students were to cut out and glue into a larger shape. At least 76 percent of the students were able to perform at or above the criterion level as judged by a panel of evaluators.

MATERIALS AND EQUIPMENT

SHAPE RELATIONSHIPS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which helps primary grade students explore relationship between shapes

This package, part of the Aesthetics and Arts Elements group of the *Five Sense Store* materials, helps students explore relationships between different shapes, between shapes and the environment, and between shape and other visual elements (texture, size, color, and volume). A book called *More Things About Shapes* presents the concepts, and foldup cubes and pyramids provided on worksheets reinforce the students' discoveries about the differences and the similarities between two-dimensional and three-dimensional shapes. Additional activities, such as the building of larger sculptural and architectural shapes with the foldup shapes, reinforce the relationships discussed in the book.

This package will encourage students: (1) To perceive that many things in the environment share the same or similar shape; (2) to discover that color, size, texture, and volume, as well as shape, give more complete visual information about a thing; (3) to perceive and analyze three-dimensional shapes from different physical points of view; and (4) to work with depth as it relates to shapes in space by combining two-dimensional shapes into shapes that have volume.

Sample Lesson

(Addressed to Teachers)

Lesson 1

Concept: Many things have the same shape.

Objective: The students will perceive that many different things in the environment share the same or similar shapes.

Procedure: The students observe different things which have similar shapes. They create different things from the same shapes by adding more lines and surface details, including color, texture, and volume. Their own drawings, and discussion about those drawings, help them understand the concept involved.

The students should become aware of objects that are round or circlelike. Help your students find things around them which are similar in shape, such as, clocks, lights, balls, oranges, and the like.

Select another general type of shape, perhaps things which are more or less square or oval, and repeat the above process. In looking for objects of rectangular shape, for example, the students might find windows, doors, boxes, bricks, desks, rooms, books, or chalkboards.

Have the students use the outlines on their worksheets and draw shapes. It is not necessary that the shapes the student draws have exactly the same outline. Rather, similarity should be the keyword for this activity: The concern is with things that look roundish, or free-form, or square, and so forth. The criteria for assessing student products are given here:

Fluency: The student should draw at least two things that share the same shape.

Flexibility: Each two things the student draws on the worksheet should show redefinition of the shapes provided and each should show a quite different thing.

While elaboration is not the main point here, the addition of details to the shapes should be encouraged.

Always watch for the spirit of experimentation in the students' work.

SUBJECT AREA(S)

Aesthetics and Arts Elements pertaining to general art is the subject area.

There are shape similarities among things different in kind. Some shapes having volume may be seen as composed of smaller shapes or planes; and volumetric shapes, too, may be combined to form larger three-dimensional shapes. Color, size, texture, and volume relate to shape. The representation of any object differs from the object itself.

INTENDED USERS AND BENEFICIARIES

Shape Relationships is designed for students at the primary grade levels.

GOAL(S) OR PURPOSE(S)

The purpose of this package is: (1) To help the students perceive that many different things in the environment share the same or similar shapes and that these things also have color, size, texture, and volume; (2) to help students perceive and analyze three-dimensional shapes from different points of view; (3) to discuss depth as it relates to objects and to two-dimensional representations of those objects; and (4) to lead students to make aesthetic judgments about their visual world.

PATTERNS OF USE

Shape Relationships is a self-contained instructional package with activities that are both sequential and cumulative. It may be used as part of an ongoing elementary art curriculum; taught as unit with the other two shapes packages, *Shape* and *Shapes and Patterns*; linked with other AEP units in the Aesthetic and Arts Elements group; or used to develop basic sensory perception skills.

ASSESSMENT PROVISIONS

Although there are no formal tests, learning is assessed by teacher and students. Student products are judged by both teacher and student, and the teacher is provided with guidelines for judging their work. Oral responses are also assessed and the teacher's guide contains clues for the teacher's evaluation.

TIME REQUIREMENTS

Shape Relationships requires approximately 15 hours to complete, depending upon the number of students and whether the teacher divides them into groups when working with the package. The various activities within the package require from 30 minutes to 1 hour to complete.

IMPLEMENTATION PROCEDURES

Shape Relationships does not require a specialist teacher. The package has been tested with students in grade 2 but may be used with younger and older students at the discretion of the teacher. There are various possibilities for structuring the activities in this package. The student books were written to be almost totally self-instructional for students, but most sections can be benefited by additional information supplied by the teacher. The teacher may instruct the whole group on what to do and then allow smaller groups to work at various times or may let individual students or small groups work independently with the materials.

Summary Cost Information

Packages can be purchased in varying multiples of 6; for example, 12-student, 18-student, or 24-student sets. Student and teacher materials can be purchased separately so that only one set of teacher materials need be purchased with two-, three-, four-, or five-student sets. Cost of one complete unit containing enough materials for one teacher and six students is $31.45.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying socioeconomic characteristics. The developers have received no reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcoming of materials is resolved by an appropriately directed review by a qualified expert outside the program. The materials are revised to eliminate any deficiencies detected in the review.

Information gained from classroom trial indicates the materials can stand alone in the hands of a competent teacher and be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They adhere to the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators review the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers monitor a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second pilot stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program. Second, there must be evidence that the materials can stand alone in the hands of a competent teacher. Third, the materials must meet certain short-term payoff objectives that are evidenced by measurable differences in the behavior of the students who have studied the materials. The program continues to gain information on a yearly basis after the pilot trial is completed.

The pilot evaluation of this package was carried out with 2d- and 3d-grade students in local schools. Specially constructed tests indicated that at least 70 percent or more of the children were able to reach standards judged to be average, good, or excellent on tasks relating to the package after receiving instruction. Teacher satisfaction with the materials was also high, as measured by post-treatment questionnaires.

SHAPES AND PATTERNS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which helps students discover the relationship of shapes to patterns

This package, part of the Aesthetics and Arts Elements group of the *Five Sense Store* materials, helps students discover the relationship of shapes to pattern. Instruction is centered on the student book, *Things About Shapes and Patterns*, which introduces the students to how color, size, texture, and volume function in the formation of visual patterns. In addition to working with the book, students also use shapes provided on worksheets to create original patterns. They are encouraged to look for examples of patterns all around them—in books, in the classroom, in nature. Additional worksheets have foldup shapes that are used to create patterns of volumes.

This package will encourage students: (1) To become aware that a pattern made up of shapes employs shape similarity, repetition, and ordering; (2) to become aware that a visual pattern can also have color, size, texture, and in some cases, volume; and (3) to perceive and analyze similarity, repetition, and order of shape, color, texture, size, and volume in patterns found in works of art and in the environment.

Sample Lesson

(Addressed to Teachers)

Lesson 2

Concept—Patterns are made of more than shapes.

Objectives—The students will be made aware that a visual pattern can also have color, size, texture, and in some cases, volume.

Procedure—Students will be asked to create both flat and three-dimensional patterns. They will discuss color, size, texture, and volume in relation to patterns.

Grouping like or unlike shapes into a unit creates a new shape from the parts, and the new shape can be repeated to form a pattern. Further, color can be repeated on certain shapes or groups of shapes within a pattern, and the other elements—size, texture, and volume—can operate in the same way. Repetition, shape or shape unit similarity, and ordering remain the guiding principles.

The repetition of two things is discovered in this activity: One is repetition of shape units; the other is repetition of the colors of the shape units.

Students are asked to find a shape unit in their books. Specifically they are asked to point out the largest shape unit and whether they can see a pattern in the repetition of colors.

"How many different textures are repeated in this pattern?" "How would you describe each texture?"

"What shapes are repeated to make the pattern?" "How many different sizes are repeated in this pattern?" "What are the shapes that are repeated?" "What is the largest shape unit in this pattern?"

The worksheets which accompany this lesson provide the students an opportunity to make use of the concepts explored. They should be able to make patterns; to make use of color, texture, and size variations in the patterns provided on the two worksheets; and to create larger units of pattern by combining the different shapes provided.

Each student needs scissors, crayons or colored pencils, heavy paper (12 by 18 inches or less), and rubber cement or glue.

Watch for use of repetition, ordering, and use of similar shapes or shape units in student patterns. Allow students plenty of time to experiment and have fun with the patterns before they select their "best" to glue.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Visual arts.

Order and repetition and variation apply to pattern formation. A pattern is formed when one or more shapes are repeated or when elements such as color, texture, size, and volume are repeated.

INTENDED USERS AND BENEFICIARIES

Shapes and Patterns is designed for students at the primary grade levels.

GOAL(S) OR PURPOSE(S)

The purpose of this package is to help students: (1) To become aware that a pattern made up of shapes employs shape similarity, repetition, and ordering, and that a visual pattern can also have color, size, texture, and in some cases, volume; (2) to be able to perceive and analyze the elements of pattern in the environment and in works of art; and (3) to increase their ability to make aesthetic judgments about visual phenomena.

PATTERNS OF USE

Shapes and Patterns is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing elementary art curriculum, taught as a unit with the other two shapes packages (*Shape* and *Shape Relationships*), linked with other AEP units in the Aesthetics and Arts Elements group, or used to develop basic visual perception skills.

ASSESSMENT PROVISIONS

While there are no formal tests, students and teacher assess learning by analyzing both oral responses and student products. The Teacher's Guide contains guidelines for assessment of learning.

TIME REQUIREMENTS

Shapes and Patterns requires approximately 10 hours to complete, depending upon the number of students a teacher has and whether students are divided into groups when working with the package. The various activities within the package require from 30 minutes to 1 hour to complete.

IMPLEMENTATION PROCEDURES

Shapes and Patterns does not require a specialist teacher. The package has been tested with students in the 2d grade, but may be used with younger and older students at the discretion of the teacher. There are various possibilities for structuring the activities in this package. The student books were written to be almost totally self-instructional for students, but most sections will benefit from added information by the teacher. The teacher may instruct the whole group on what to do and then allow smaller groups to work at various times, or may let individual students or small groups work independently with the materials.

MATERIALS AND EQUIPMENT

Summary Cost Information

Packages can be purchased in varying multiples of 6, for example, 12-student, 18-student, or 24-student sets. Student and teacher materials can be purchased separately, so that only one set of teacher materials needs to be purchased with two-, three-, four-, or five-student sets. Cost for one complete unit containing enough materials for one teacher and six students is $39.95.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and, third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. The program continues to gain information on the utilization of the published version of the package on a yearly basis after the pilot trial is completed.

The package was tested with 2d-grade students in local schools who came from a variety of socioeconomic levels.

One of the activities in the workbook was used to test whether the students achieved the package objectives. A panel of evaluators judged whether students met the criterion for making shapes into different patterns. Ninety-eight percent of the students performed at, or above, the criterion level.

TEXTURE (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package to help young children better understand the qualities of texture in their environment and in the arts

Texture, one of the Aesthetics and Arts Elements group of the *Five Sense Store* packages, is designed to help students understand that texture has to do with both touching and seeing. A set of texture bags provides an assortment of tactile stimuli on which package activities are based. Sets of texture photographs provide visual correlates for the tactile stimuli to focus on how textures look and feel. Students use the tactile stimuli with a set of word cards to find the words to describe what they are touching. Photographs of art works encourage the students to transfer their learning to the exploration of texture in works of art. Through a group of art activities, students create simple art works which have textures.

This package will encourage students: (1) To look for, perceive, and describe qualities of texture in their environment and in the arts; (2) to perceive and identify relationships between tactual experience and movement; (3) to perceive correlations between visual and tactual properties; and (4) to identify textural qualities in visual art referents.

Sample Lesson

(Addressed to Teachers)

Activity 9: Identifying Textural Qualities in Art Reproductions

General description: The students will examine visual art reproductions for their textural qualities and compare them with the texture materials they feel in their bags.

Background Information: The following information about the textural qualities in works of art is not intended to be taught to your students, but to help you determine what they are looking at when they match the bags with the reproductions.

Visual artists employ texture in various ways. An artist employs texture in a tangible form by using actual materials, such as newspaper, seeds, wood, or cloth, in combination with paint, or by themselves. Works where it is actually possible to feel these textures include collage and assemblage, and artistic compositions combining these various materials into a unified design on canvas or board. A painter also creates texture on a two-dimensional surface by the heavy application of paint, gesso, or polymer, thus causing the pigment to stand out in relief. This kind of textural painting, termed "impasto," can be seen in many of the paintings of Vincent van Gogh, Maurice de Vlaminck, and Jackson Pollock. Another way the painter creates texture is by mixing paint with sand, sawdust, or other rough materials to get a textural quality. The painter and the sculptor use tools, such as the palette knife, a sponge, a pen, or a gouge, to produce individual texture characteristics. And the sculptor chooses materials—wood, clay, wire, stone—to work with, either enhancing the existing textures or manipulating them to create additional textural qualities. Thus, artists' use of texture suggests that texture is perceived by more than one sense. Artists ask us to see how a surface looks, to imagine what it feels like, and, in some cases, even to touch the work of art.

Procedure: Instruct the students to put all eight bags in front of them. Distribute the same art reproduction to all the students. For your convenience, the reproductions have been listed in an easy-to-hard progression from 1 to 12; that is, the texture in number 1 is relatively easy to identify, and that in number 12 is relatively difficult. This is simply a suggested order for dealing with the reproductions.

Say to the students: "Find the bag or bags that have textures that are the same or nearly the same as the textures you see in this work of art."

In most cases, several bags will be needed to fully describe the textural qualities in a painting. The students can further explore the different textures they see by sharing their responses and discussing their different choices.

In relating texture and subject matter, ask general questions: "What do you think the artist was trying to tell us? What if he used a different kind of texture? Would he be saying the same thing? Would you feel the same about the work?"

"What kind of texture would you use?"

"What kind of mood has the artist created? Happy, sad, spooky?" Did the textures he used help create the mood?

One point you might want to note for your students, if they mention it, is that some of the art works shown in the photographs are sculptures and paintings which use "impasto," so that the actual work of art could be felt in the same way as the materials in the bags. Other paintings, however, are flat and only make us think we can feel the textures in them. Some painters give us the feeling of a third dimension through the use of color, or lights and darks on a totally flat surface; others give us this feeling by actually building up the paint or by adding other materials to the canvas.

The following is a list of the 12 art reproductions with the texture bags that would be appropriate choices for each one. These choices are included to help you guide the students through the activity, but they are not definitive. There is a variety of possible responses for each reproduction. If you do not understand the students' choices, find out what they were looking at and touching when they made their decisions. If they can give you a valid reason for choosing a specific texture, accept it. For example, when asked why they chose the purple bag (stipple mat) and the orange bag (foam rubber) for number one, a student replied, "The shapes in the purple bag are round like the ones in the picture; and the material in the orange bag can be pressed down just like I think the shapes in the picture could be if I touched them."

1. Victor Vasarely, *CTA-104-E*—stipple mat (purple bag), sponge (orange bag).

2. Vincent Van Gogh, *The Starry Night*—shag carpet (light blue bag), matted fiber (yellow bag), synthetic fur (red bag).

3. Maurice de Vlaminck, *Houses at Chatou*—shag carpet (light blue bag), synthetic fur (red bag).

4. Henri Matisse, *The Purple Robe*—shag carpet (light blue bag), wire screen (dark blue bag), synthetic fur (red bag), ridged material (pink bag), stipple mat (purple bag).

5. Claire Falkenstein, *Point as a Set*—matted fiber (yellow bag), shag carpet (light blue bag), wire screen (dark blue bag).

6. Auguste Renoir, *On the Terrace*—synthetic fur (red bag), sponge (orange bag), shag carpet (light blue bag), matted fiber (yellow bag).

7. Jackson Pollock, *Grayed Rainbow*—matted fiber (yellow bag), shag carpet (light blue bag), synthetic fur (red bag).

8. Constantin Brancusi, *Mademoiselle Pogany*—acetate (green bag), stipple mat (purple bag), matted fiber (yellow bag).

9. Gustav Klimt, *The Park*--sponge (orange bag), stipple mat (purple bag), shag carpet (light blue bag), matted fiber (yellow bag), synthetic fur (red bag).

10. Victor Vasarely, *Capella*—ridged material (pink bag), wire screen (dark blue bag), acetate (green bag), stipple mat (purple bag).

Tell the students to squint and look for the hidden shapes in this photograph. Then ask which texture has that shape (the texture in the purple bag-stipple mat, for the circles

11. Yves Tanguy, *Rapidity of Sleep*—acetate (green bag), sponge (orange bag), fur (red bag).

12. Henri Rousseau, *The Waterfall*—shag carpet (light blue bag), ridged material (pink bag), acetate (green bag).

When your students have finished matching the 12 reproductions with the texture bags, you might want to compare the reproductions with one another to see how the same subject matter was handled with different textural effects. A grouping of the reproductions is provided below. Some of the titles appear in more than one group.

In talking about the reproductions, emphasize the feelings conveyed by the different textural renderings. Now would be a good time to show the color slides, pointing out to your students the difference that a new element (color) makes in works of art.

This activity should be extended by a visit to an art museum to look for textures in real paintings and sculptures.

SUBJECT AREA(S)

The subject area is Aesthetics and Arts Elements: Visual art.

This product focuses on exploration of the individual qualities which distinguish textures from one another, relation of texture and movement, relation of the visual and tactual properties of texture, the artist's use of real and illusionary textures in works of art.

INTENDED USERS AND BENEFICIARIES

Texture was designed for, and formally tested with, kindergarten and 1st-grade students.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is: (1) To let students experience texture tactually, visually, and kinesthetically and (2) to help them become more aware of it in the natural environment, the manmade environment, and in works of art.

PATTERNS OF USE

Texture is a self-contained instructional package with activities that explore texture from various sensory aspects. It may be used as part of an ongoing curriculum in art; linked with other Aesthetic Education Program packages which are related to music, dance, literature, and theater and which are clustered around aesthetics and arts elements; and used with perceptual development programs.

ASSESSMENT PROVISIONS

While there are no formal tests, teacher and students assess learning by judging student products and oral responses. Guidelines for assessing the responses are written in the teacher's guide.

TIME REQUIREMENTS

The activities in *Texture* require 12-20 hours to complete, depending upon how much discussion time is allowed and how many of the art activities are done. The activities are divided into 30-minute periods.

IMPLEMENTATION PROCEDURES

Texture does not require a specialist teacher. Students work in pairs on their own or within a larger group. A fairly large amount of space is needed for students to spread out their materials.

Summary Cost Information

Depending on classroom organization, units can be purchased in varying multiples of 6 (such as, 12-student, 18-student, 24-student sets with teacher materials). Student materials and teacher materials can be purchased separately.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials.

The prepublication evaluation of the package was carried out with kindergarten classes in local schools representing a variety of socioeconomic levels. While the differences in achievement on specially constructed tests were not statistically significant, package groups were better able to relate photographs of surfaces of textures to similarly textured natural objects and to discriminate tactually between textures on the basis of verbal instructions. Student and teacher satisfaction with the package was high, as indicated by an orally administered postpackage questionnaire.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:				
3 sets of texture bags (8 in each set) 6 sets of photographs (12 in each set) 3 sets of art reproductions (12 in each set)	1 set per 6 students	*	No consumables	
Teacher materials:				
1 set of word cards (40) 1 mystery bag 1 set of 35mm color slides (12) 1 teacher's guide		*		

*Cost not yet determined.

TONE COLOR (PART OF THE AESTHETIC EDUCATION PROGRAM)

A group of materials which helps students from preschool to 5th sharpen their perception of one quality of sound, tone color

The second group of *Five Sense Store* materials, Aesthetics and Arts Elements, includes this package which helps students sharpen their perception of one quality of sound—tone color. A filmstrip introduces the idea of parts and wholes in many things—an egg, a building, and a musical selection. This idea is amplified in a sound, color film that shows and graphically points out the parts heard in a performance of a song called "Give a Million Cheers for Me." The students then listen to recorded musical selections, ranging from a drum pattern to Brubeck's "Take Five," and indicate the tone colors they hear with illustrated cards and a game board.

This package will encourage students: (1) To become aware of parts and wholes in the arts and the environment; (2) to come to an awareness of a musical whole being made up of smaller, distinct parts; and (3) to hear and recognize specific tone colors.

Sample Lesson

(Addressed to Teachers)

Activity 3: Identifying Tone Colors

General description: In this activity, the students will listen for tone colors on the records and will identify them by picture, name, or number on their tone color word sheets.

Classroom management: Before using the record with students, the teacher should listen to the explanation and the first few selections for activity 3. A period of 30 minutes should be enough to complete the activity with the students, but selections can be repeated and responses can be discussed.

First, explain the term "tone color" to the students: Tone color is the characteristic sound of an individual instrument or of a particular voice and is also known as timbre. The tone color of a sound permits the listener to distinguish between the sounds made by a guitar and a banjo, or between a violin and a clarinet.

When students are familiar with the meaning of the word "tone color," move to the record and tone color word sheet portion of the activity. The answers to each selection on the record are given at the beginning of the next recorded band and are also noted below.

The students can identify the tone colors by the red numbers on the tone color word sheets, by name, or by pointing to the illustration.

SUBJECT AREA(S)

Aesthetics and Arts Elements: Music.

Introduction of the term "tone color;" concept of part and whole; recognition of tone color as an important, aurally distinguishable part of a musical selection; and familiarity with names and pictures of instruments that produce certain tone colors.

INTENDED USERS AND BENEFICIARIES

Although formally tested with children at the 1st-grade level, this product has been used in preschool and 5th grade, as well as all the grades between.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to help students focus on tone color so that they can come to an understanding of how the parts of a whole sound combination fit together and so that they can begin to judge and value the range of sounds and music around them.

PATTERNS OF USE

This product is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in music; linked with other music-based units developed by the Aesthetic Education Program to create a curriculum; linked with other AEP packages which are related to art, dance, theater and literature and which are clustered around Aesthetics and Arts Elements; or used with basic sensory development programs.

ASSESSMENT PROVISIONS

Learning is assessed by both teacher and students. Provisions for assessment are built into the teacher's guide, and the final activity of the package focuses upon application and evaluation. Response sheets and recorded musical examples are provided along with advice to the teacher for interpreting assessment results.

TIME REQUIREMENTS

This product takes 5 to 9 hours to complete, depending on the amount of discussion the teacher encourages and whether parts of activities are repeated. The activities require a minimum of one-half hour each.

IMPLEMENTATION PROCEDURES

This product does not require a specialist teacher. It may be taught in small groups or large groups, depending on the teacher's wishes. The teacher's guide outlines all procedures clearly and has been rated useful in field trials.

The teacher is encouraged to challenge students to apply the part-and-whole concept to other things they perceive and to apply their learned approach to listening.

Field reports indicate that the materials are durable. Consumables are minimal and can be purchased from the publisher.

Summary Cost Information

This product can be purchased in sets of varying multiples of 6 (12-student, 18-student, or 24-student sets). Student materials and teacher materials can be purchased separately so that only one teacher set need be purchased with two, three, four, or five student sets. Cost for one complete unit containing enough materials for one teacher and six students is $117.50.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training in music can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on utilization of the published version of the package.

The prepublication of the unit was carried out with 1st-grade students in local schools. Students responded favorably to the set of materials during classroom trials as evidenced by their responses on a questionnaire. Teachers who used the materials were generally favorable to them as indicated by their responses to a questionnaire at the conclusion of the pilot trial.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials: 6 "How Many?" word sheets 6 sets of tone color cards (26 in each set)	1 set per 6 students	37.50*	Response sheets consumable yearly or after 5 implementations with a total of 30 students	
Teacher materials: Teacher's guide (24 pp) 16mm sound color film Color filmstrip Record album with 2 12-in. LP disk records		80.00*		

*Price subject to change.

INFORMATION CURRENT AS OF MARCH 1975 ■

THE ACTOR
(PART OF THE AESTHETIC EDUCATION PROGRAM)

A package designed to acquaint students in grades 4-8 with actors

This set of instructional materials, one of the Aesthetics and the Artist series of the *Five Sense Store* packages, is designed to acquaint the student with actors—who they are and what they do. The materials include tapes or slide-tape presentations for each activity in which actors Mary Alice, Saundra Deacon, Will Geer, Paul Newman, Mary Lou Rosato, and Luis Valdez talk to the students about their experiences, training, research, practice, and performances.

In the set of materials, three lessons deal with the actor as an artist who develops through years of experience and learning, an artist who sharpens the nearly universal tools of body, voice, and mind to the point of being able to adapt to performing a wide variety of roles in various performance places and before various audiences. The students explore actor training by engaging in exercises suggested by the artists on the tapes. The students explore the process of acting by playing the acting game, which challenges them to build characters. The game asks the students to make choices of general character types, plots, and styles. A 5- by 20-foot visual environment (three-walled, hinged display board) provides an introduction to and summary of the primary concepts of the unit, and a cartoon-style student journal provides a place for the students to record their responses to the package.

This package will encourage students: (1) To make observations and judgments about the various ways people, including actors, express ideas and feelings through elements such as body and voice; (2) to listen to actor-artists talk about who they are, what they do, and how they do it; (3) to perform acting exercises and to build a character in an improvised scene based on their observations, the artists' comments, acting exercises, and their own experiences and imagination as guides to making critical choices; (4) to create a personal journal on actors in which they express their responses to the materials in their own words and in pictures; (5) to help choose and coordinate theatrical elements, such as directing, designing, executing, or managing, through a group-sharing process as they create improvised scenes; and (6) to perform their improvised scenes in an assigned place and for an assigned kind of audience.

Sample Lesson

(Addressed to Teachers)

Lesson 8: Variety of Roles

Concept: Actors change as a result of playing different roles, and roles change when played by different actors.

General Description: The discussion based on the students' observations will make the students more aware of the large number of roles actors, and most of us, "play" as compared to the relatively few roles we and actors assume in real life. The tape of Deacon, Newman, and Rosato will draw attention to the way actors' voices, bodies, and minds change as they play a variety of roles. By playing the acting game "Variety of Roles" segment, the students will experience playing different roles.

Procedure: Put up the "Variety of Roles" section of the visual environment. Point out the concept statement: "Actors change as a result of playing different roles, and roles change when played by different actors." Tell them that the four pictures represent a range of roles Will Geer has played.

Conduct a discussion of their observations. Whom did they observe that they wanted to play? Why? Have them think about the number of life roles they will assume—not roles they'll "play" but roles they'll "be." They will mention mother, father, daughter, worker, friend, grandchild, cousin, buyer, seller, and so forth. Now ask them to think of all the roles they've played, i.e., roles they've pretended. They may list many roles, e.g., nurse, dog, lion, tree, or astronaut. Tell them to consider how many roles an actress plays in a lifetime.

Tell them the tape is in two parts. The first part is a tape giving them a sound experience of a variety of the roles played by Ms. Deacon. The second half is a slide/tape in which Paul Newman talks about the specific effect that some of the roles he has played have had on him, and Mary Lou Rosato tells us how she has changed as a result of having played a wide variety of roles.

Remind them of the concept statement that actors change as a result of playing different roles and roles change when played by different actors.

Divide students into small groups for the "Variety of Roles" segment of the acting game. Check to see if promised things from activity 7—props, costumes, and so forth—have been brought. Students are to switch roles. Each person is to be briefed by the person who played that role in the previous activity. After the briefing period, break them out into an individual rehearsal period (5 minutes).

Have the groups rehearse for 5 to 7 minutes.

Have the groups share their scenes with the class.

Lead the class discussion based on two questions: (1) How did the role change when a different actor played the role? and (2) How did you as an actor change in order to play a different role?

Tell them they will go back to their original roles next time.

SUBJECT AREA(S)

Aesthetics and the artist: Theater arts.

Experiences, training, research, practice, and performances of actors; the actor as an artist who sharpens the tools of body, voice, and mind to react as desired; how an actor builds a character, other people involved in theater, e.g., set designer, costumer.

INTENDED USERS AND BENEFICIARIES

The Actor is being developed for use by 4th- and 5th-grade students. In all probability, it will be suitable for 6th-, 7th-, and 8th-grade students as well.

GOAL(S) OR PURPOSE(S)

The purpose of *The Actor* is to help students: (1) To know who actors are and what they do; (2) to know how experiences, training, research, and practice are put together in performance; and (3) to experience personally the creative process engaged in by the actor.

PATTERNS OF USE

The Actor is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in drama; or linked with other AEP units which are related to music, art, dance, and literature and which are clustered around Aesthetics and the Artist.

ASSESSMENT PROVISIONS

Assessment for the learning activities will be designed during development of the instructional unit.

TIME REQUIREMENTS

The Actor is now going into the first stages of testing. Therefore, an accurate statement about the length of time needed to complete the lessons is difficult to make. It is estimated that 20 hours will be required to do all the lessons.

IMPLEMENTATION PROCEDURES

The Actor does not require a specialist teacher. The lessons require both large-group and small-group instruction. Since the package has not as yet been through any formal testing process, the usefulness of the teacher's guide has not been evaluated.

As presently planned, consumables are minimal and will be purchased from the publisher.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in drama will be able to implement this instructional package. Workshops will be offered by the publisher, and curriculum consultation will be available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

The Actor is presently in development. When completed, it will be tested as defined in the *Basic Program Plan* (CEMREL, 1972). At that time, appropriate assurances and claims will be made.

RD 010 017

THE ARCHITECT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A set of materials which introduces 4th- and 5th- grade students to architects and the realm of architecture

This set of instructional materials, one of the Aesthetics and the Artist series, introduces students to architects as persons who deal with form in function in designing buildings for people. The students explore the influences which affect the work of architects, the process of organization and decisionmaking through which their work develops, the people with whom architects work, and the end results—structures—of the whole process.

The instructional materials used in this package include a book of visuals illustrating the concepts that spaces which include people become places, an activity at a specific time becomes an occasion, and places plus occasions become architecture.

A sound tape of interviews with architects will help the students understand better what motivates architects and how they live and work.

Using a card file called "Create a Place," students will be asked to come up with solutions to various architectural problems. A large poster will show students all the things an architect has to know in order to design a building.

This package will encourage students: (1) To investigate their own spaces and how they experience them, (2) to become involved in activities that relate to the architects' perceptions and use of space and light, (3) to become involved in activities that involve decisions in relationship to form and function, and (4) to experience many types of architecture and explore their development in relationship to their previous experiences through the activities in the package.

SUBJECT AREA(S)

Aesthetics and the artist: Architecture.

Definition of architecture; some historical background of architecture; differences in functions between large buildings, for example, offices or theaters, and homes; places are created for people to participate in specific kinds of activities; the appropriateness of a place for a given activity is in part a function of its aesthetic qualities.

INTENDED USERS AND BENEFICIARIES

The Architect is being designed for use by 4th- and 5th-grade students.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are for students: (1) to understand that architects are people who deal with form and function in designing buildings for people, (2) to explore the influences which affect the work of architects, (3) to become familiar with the process of organization and decisionmaking through which the architect's work develops, and (4) to understand that "architecture is a human product which should order and improve our relations with the environment."

PATTERNS OF USE

The Architect will be a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in art and architecture, or linked with other AEP packages which are related to music, art, dance, drama, and literature and which are clustered around Aesthetics and the Artist.

ASSESSMENT PROVISIONS

Assessment for the learning activities will be designed during development of the instructional unit.

TIME REQUIREMENTS

The Architect is in the developmental stage, therefore, no specific time requirements have been determined.

IMPLEMENTATION PROCEDURES

The Architect will not require a specialist teacher.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training will be able to implement *The Architect*. Workshops will be offered by the publisher and by CEMREL, Inc. Curriculum consultation will also be available from CEMREL, Inc.

ASSURANCES AND CLAIMS

The instructional unit, *The Architect*, is presently in development. When completed, it will be tested as defined in the Basic Program Plan 1972. At that time, appropriate assurances and claims will be made.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

RD 010 018

THE CHOREOGRAPHER (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which introduces 5th-grade students to the artists who create dances

The Choreographer, one of the Aesthetics and the Artist series of the *Five Sense Store* packages, introduces students to choreographers as creative artists who make dances which are presented in performance by dancer-performers.

To accomplish this, the students work primarily with a text, sound tapes, and their own bodies to identify the different roles of creators (choreographers) and performing artists (dancers) and to become acquainted with the materials of dance movement. As they use their bodies to explore the expressive potential of movement, the students will experience dance as a creative art. They will begin to understand the choreographer's creative, decisionmaking process by making their own creative and aesthetic decisions about movement, design, props, setting, and costumes.

This set of materials will encourage students: (1) To look for and describe movement in their surroundings and to perceive how this movement, transformed by the imagination of the choreographer, becomes the source of dance ideas; (2) to find new ways of using their bodies to move; (3) to select and organize movement to express a specific idea or feeling; (4) to appreciate the fact that the making of a dance is a highly personal, creative act, individual to every choreographer and to each dance; (5) to improvise their own movement studies using ordinary objects—a chair, ball, scarf—as a source of ideas; (6) to make careful choices of sound in combination with movement; and (7) to select theatrical elements—props, costumes, lighting, settings—which will enhance the movement and communicate the theme of a dance.

Sample Lesson

(Addressed to Teachers)

Lesson 5: Movement, the Language of Dance

Purpose and general description: The purpose of the activity is to teach students how to give their dances a clear beginning, middle, and end. The students compare the mechanics of turning words into a sentence to the structuring and organizing of movement into a dance. Then they select movement to illustrate a stimulus sentence.

Procedure: After the warmup, have the group sit on the floor in a semicircle facing the chalkboard. On the chalkboard, write, in scrambled order, the words of the following sentence: The dancers go round and round and around. Use no capital letters and no period.

Have the group unscramble the words so that they read: "the dancers go round and round and around." You may need to give them a little help. Ask them to tell you what is needed in order to make the words a proper sentence; i.e., the need for a capital T and a period after the last "around." Add the capital T and the period. Remind the students that in this way we know where the beginning and end of the sentence are.

Discuss with the group the idea that movement is the language of dance. Point out that the movements of a dance are like the words that make up a sentence; they must be selected carefully and organized to express the choreographer's idea.

Explain to the group that like a sentence, or a paragraph, or a whole story, a dance needs a beginning and an end. Tell them that in order to give their dances a beginning and end, they will do the following:

a. They will start with no movement, holding the opening position of the dance.
b. They will do the movements of the dance.
c. They will freeze on the last movement, holding it.

Demonstrate this for the group in this way: Stand in place with no movement at all. Then walk from one spot to another spot in the room. Hold your last movement for a few seconds, so that they can clearly see the end of your movement. Concentrate from beginning to end.

SUBJECT AREA(S)

Aesthetics and the artist: Dance.

Subject areas involve what choreographers do and where they get their ideas; movement as the material of dance and the body as an instrument for making movement; role of theatrical elements—music, props, lighting—in dance productions; and organization and presentation of student dances.

INTENDED USERS AND BENEFICIARIES

This product was designed for and is being tested with 5th-grade students. At the discretion of the teacher, however, it will be able to be used with students from 5th to 8th grades.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are for students: (1) To become aware that movement in their surroundings, transformed by the imagination of the choreographer, becomes the source of dance ideas; (2) to be able to perceive and describe the design of the movement in others' dances and to use design as the basis for a dance study of their own; and (3) to experience directly the creative process involved in choreography by making and performing their own dances.

PATTERNS OF USE

This product is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in dance; linked with other Aesthetic Education Program (AEP) packages which are related to art, music, drama, and literature and which are clustered around Aesthetics and the Artist; or used with physical development programs.

ASSESSMENT PROVISIONS

Throughout the activities, student learning is assessed informally by both teacher and students. Appropriate guidelines for assessment are built into the teacher's guide. A task checklist included in the last activity guides students in evaluating their own creative work.

TIME REQUIREMENTS

This product takes about 10 hours to complete. The activities are divided into 45-minute sessions.

IMPLEMENTATION PROCEDURES

This product does not require a specialist teacher. The activities are designed for large-group instruction. A large amount of clear floor space is needed for the movement explorations. The teacher's guide carefully outlines all procedures and gives explicit instructions in conducting the movement activities.

This product encourages the teacher to extend the concepts in the package by having students attend a dance concert or inviting local choreographers and dancers to pay a visit to the school; by watching for television programs on dance; by renting films on dance to show to students; and by suggesting an included bibliography on dance to students.

Based on information on the durability of materials in this prototype package, it is planned to make those in the published version equally as durable.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in three separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the aesthetic education programs' instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers monitor a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the packages on a yearly basis.

Results from the observations, testing, and teacher interview during the hothouse trial indicated that no major reconceptualizing or content revisions were necessary; the package generally achieved its own goals and those of the aesthetics and the artist series. Both students and teachers exhibited a high degree of involvement and satisfaction with the materials; however, these conclusions must remain tentative until testing at the three pilot sites is completed. *The Choreographer* materials were revised following the hothouse trial and will be revised again in light of the data obtained from the pilot trials.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:

THE COMPOSER (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which introduces 4th- and 5th-grade students to composers as the originators of music

This set of instructional materials, one of the Aesthetics and the Artist series of the *Five Sense Store* packages, introduces students to composers as the originators of music. The students learn that composers are real people, individuals who have all kinds of ideas about sounds and are able to express their ideas for others to hear and/or perform. Students will see that a composer may be a primitive person in some distant land chanting to a self-made instrument in preparation for a tribal ceremony or may be a member of a technological society creating a composition for hundreds of performers or using electronic devices. The students will understand that the unifying factor between both efforts is the organizing of sounds for others to hear.

This package asks the students to focus on their own personal creative process, and to apply their findings to the making of music. For this purpose, the students will participate in a game in which they respond to cue cards which suggest an incident, a word, or an object. The students then translate their responses into musical meaning and share this meaning as the musical creator does. Through various media, the students will meet composers who explain what they do and how they go about doing it.

Throughout the set of materials, students will explore notation, instrumentation, and other elements which constitute the art of composing. The students will hear and see various systems, including the standard system of composition. A slide-tape presentation is used to demonstrate symbols, systems, and visual representations of the sounds which the students will hear in the presentation. The students will create their own symbol system which will be used to record their own sound ideas for others. Students will also be encouraged to select the instrumentation which will be used in expressing their sound ideas.

Throughout *The Composer* it is emphasized that the students can create compositions reflecting their personal decisions and feelings about sound, and that these compositions can be performed by others.

Sample Lesson

(Addressed to Teachers)

Lesson 3. An Impromptu Composition Period

Procedure: The beginning of this experience draws heavily on the teacher's willingness to portray the role of a composer. This portrayal simply attempts to illustrate for the class a thought process which could be used to create a sound composition. "It's as simple as watching sentences evolve into a paragraph and then, hopefully, into a personal literary statement—except in this case you substitute sounds for words or you add sounds to your words. Surely, we all have tucked away a little sound ditty which can be claimed as our own. With a slight touch of theater share your sound ideas with the class. Have fun."

After you feel that you have adequately portrayed the role of a composer, organize the students into teams of five. After the teams have been organized, distribute randomly to each team two or three sound idea cards. Ask the teams to look at the visuals and read the statements on the back of each card. Explain that these cards may give them some ideas about sounds for their compositions. Before the whole group is divided into team-planning huddles, have each team show the others which card the team has chosen as a sound idea card for their composition. At this point, they may even wish to give a hint as to what may happen.

Next, allow the teams to meet and plan separately. Tell students that each team must have a composer, performer, and conductor. Tell them also that it is the composers who come up with the sound ideas for their teammates to conduct and perform. They have to designate what each performer will do and with what (such as, voice, instruments). The audience role will be filled by the other teams.

As the individual teams are planning in various parts of the classroom and working toward their sound event, the teacher should visit with each team.

Setting Up the Teams:
"Who is the composer here?"
"How many performers are you going to use?"
"Are you going to use instruments?"
"Or are you going to use only voices?"
"Your compositions don't have to be very long."
"If you have a better idea than the card, use it."
Getting Ready for the Sound Event:

When all teams have finished planning their compositions, let the performance begin. The performing team's composer first shows the "audience" what his idea card was and then the conductor and performers proceed.

SUBJECT AREA(S)

Aesthetics and the Artist: Music.

The composer as originator of music; the organizing of sounds for others to hear as the artistic endeavor of the composer; exploration of the creative process engaged in by the composer; notation as a method of transmitting sound ideas created by the composer; creation of student compositions.

INTENDED USERS AND BENEFICIARIES

The Composer, now in the development stage, is being designed for use by 4th- and 5th-grade students. As with the other packages in the Aesthetics and the Artist series, it will be suitable for 6th- and 7th-grade students as well.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is for students: (1) To discover who composers are and what the process is which enables them to create sound ideas, (2) to become aware that the sound ideas of composers are transmitted to performers and listeners through a standard symbol system, (3) to devise their own symbol system as a means of understanding the creative process of professional composers, and (4) to be able to express their own ideas about sound compositions.

PATTERNS OF USE

The Composer is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in music; linked with other music-based packages developed by the Aesthetic Education Program; or linked with other AEP units which are related to drama, art, dance, film, and literature and which are clustered around "Aesthetics and the Artist."

ASSESSMENT PROVISIONS

Informal assessment provisions are interspersed throughout the activities. Learning is assessed by teacher and student. Guidelines to aid the teacher in assessing student performance are built into the package.

TIME REQUIREMENTS

The Composer takes approximately 10 hours to complete.

IMPLEMENTATION PROCEDURES

The Composer will not require a specialist teacher. The individual lessons require both large- and small-group instruction.

Based on the information received during the testing process, materials will be designed to be extremely durable. Consumables will be minimal and easily purchased from the publisher.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in music will be able to implement this instructional package. Workshops will be offered by the publisher and by CEMREL, Inc. and curriculum consultation will also be offered by CEMREL, Inc. Costs for these services will be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

At this point, the materials have received a preliminary (hothouse) evaluation based upon daily observation of trial in one classroom. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from hothouse trial suggests that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide. Materials are being revised in preparation for pilot trial.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on utilization of the published version of the package.

At this time, only the hothouse trial has been completed. Information received as a result of this trial has confirmed that this package merits continued development. Necessary revisions are being made, and the package will be advanced to pilot trial.

RD 010 020

THE CRITICAL AUDIENCE (PART OF THE AESTHETIC EDUCATION PROGRAM)

A set of instructional materials for grades 6-8 which explores the world of the artist's receiver, the audience

This set of instructional materials, one of the Aesthetics and the Artist group, explores the world of the artist's receiver, the audience—the people who respond to artists' works; who try to understand why artists create dances, musical compositions, and stories; and who attempt to learn where artists get their ideas. In this respect, the set of materials serves as a culminating or companion set to the other materials in this series. Activities ask students to become more aware of themselves as responders. Students begin with honest reactions about how particular works of art make them feel, then try to determine why they feel that way and, over a period of time, see whether their responses remain the same. If they do, why? If not, why not? Through activities in the classroom and out-of-class experiences, the students begin to analyze and judge artistic works by answering questions about the artist's possible intent, whether the artist succeeded in that intent, and whether the effort was worthwhile. Through hearing both other students' reactions and professional critics' reactions, the students discover a range of possible responses to any given artistic work. The professional critics are included as members of the community of responders and will not be the center of attention in the materials. Rather, the focus of the materials will be on students as responders, as growing members of the critical audience, an audience that is constructively aware and responsive to the creator and the creation.

SUBJECT AREAS

Aesthetics and the Artist: Art, dance, drama, film, literature, and music.

Focus on forms in art works; analysis of responses to works of art; learning of skills of responsible criticism.

INTENDED USERS AND BENEFICIARIES

The Critical Audience is being designed for 4th- and 5th-grade students. As with all the packages in this series, however, it will be suitable for 6th-, 7th-, and 8th-grade students as well.

GOAL(S) OR PURPOSE(S)

The goals of this instructional package are for students: (1) To become aware of themselves as members of the community of responders without which art works would exist in a vacuum, (2) to recognize that their active participation is crucial to energize the interaction between creator/creation and responder, (3) to learn that within the community of responders are professional critics whose ideas about their work may be of value to the students in evaluating their own aesthetic experiences, and (4) to begin to use critical skills (perceiving, analyzing, judging) to evaluate works of art within the classical critical structure.

PATTERNS OF USE

The Critical Audience will be a self-contained unit of instruction. It may be used as part of an ongoing curriculum in any of the arts disciplines or linked with other Aesthetic Education Program (AEP) packages which are related to music, art, drama, dance, and literature and which are clustered around Aesthetics and the Artist.

ASSESSMENT PROVISIONS

Assessment for the learning activities will be designed during development of the instructional unit.

TIME REQUIREMENTS

As this package is still in the developmental stage, specific time requirements have not yet been determined.

IMPLEMENTATION PROCEDURES

The Critical Audience will not require a specialist teacher. Other information concerning the implementation of the package is not available at this time.

MATERIALS AND EQUIPMENT

As the activities in *The Critical Audience* are still in the developmental stage, no materials have been decided upon.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training will be able to implement *The Critical Audience*. Workshops will be offered by the publisher, and curriculum consultation will be available from CEMREL.

ASSURANCES AND CLAIMS

The instructional unit, *The Critical Audience*, is presently in development. When completed, it will be tested as defined in the *Basic Program Plan 1972*. At that time, appropriate assurances and claims will be made.

THE FILMMAKER (PART OF THE AESTHETIC EDUCATION PROGRAM)

A set of instructional materials suitable for grades 4-8 which explores the world of the filmmaker

This set of instructional materials, part of the Aesthetics and the Artist series of the *Five Sense Store* packages, explores who filmmakers are, where they get their ideas, how they plan and develop their ideas, and what they must know and do to create films.

The materials provided in the package engage the students in activities and experiences designed to increase their perceptions of filmmakers as people and creators. The students participate in the process of making decisions used to create a film—the same process filmmakers use. Students move from the discovery and selection of an idea through the initial stages of its development to the making of creative, technical decisions which achieve the effects needed to express the chosen idea.

The materials involve students in three kinds of explorations. First, the students see a selected sequence from the film "How Does A Rainbow Feel?"; afterwards they briefly discuss the story of the film. Following the discussion, they see and hear a slide-tape presentation in which they meet the filmmaker, Director David Holden. He tells them about himself and about the creation of the film they have just seen. Holden talks about the filmmaker as a person in the everyday world, about where ideas for films are obtained, about how the idea for a selected sequence originated, and about how the sequence was planned. The slide-tape presentation also introduces the students to the people with whom a filmmaker works and explains how these people contribute to creating the effects that communicated the chosen idea.

The contents of the student book are organized in the same sequence filmmakers follow in creating a film—from conception of the idea, through the planning of the idea's expression, to the making of creative technical decisions, and finally to the editing stage, when the film pieces are selected and sequenced to help express the chosen idea. The book is graphic, containing many photographs of filmmakers at work and stills from selected films. Also included in the book are quotes from filmmakers and an interview with Alfred Hitchcock in which he describes the process he uses in creating films. Throughout the set of materials, the students engage in activities similar to those filmmakers use in creating a film.

The concluding lesson provides options for the students to engage in the total creative process of filmmakers. They can experience selecting an original idea, thought, or feeling; planning a way of expressing it on film and showing the expression to an audience.

Sample Lesson

(Addressed to Teachers)

"Combining Flipbooks"

Purpose and general description: The purpose of this activity is to reinforce the material on motion and idea described before and to introduce the concept that increasingly complex ideas can be communicated by adding and arranging images. For this purpose the students will share with each other the flipbooks they created in activity 2 and will investigate the potentials of putting together a number of flipbooks to express a new and more complex idea.

Procedure: Have the students share with each other the flipbooks they created in activity 2. Tell them that as they show their flipbooks, they should state the idea they chose to express. Then they should flip the pages to show the images they selected to express their idea. They might flip their books quickly once, creating the illusion of movement, and then turn the pages slowly so that the other students can easily see the changes from image to image.

Ask them to talk about which flipbooks could be put together to express a new, longer idea. The combined flipbooks may actually become something like a story.

As the students begin making choices about which flipbooks to put together encourage them to try out different orders. Point out that in these ways they are creating new and more complicated ideas.

For example, in activity 2 one student may have chosen to create a flipbook in which a ball rolls across the pages, one may have created a moving car, another a clock with hands that move, and still another may have shown the occurrence of an explosion.

The students might decide to combine these flipbooks in any of the following ways: (1) Ball chasing car, clock hands moving, explosion; (2) car chasing ball, clock hands moving, explosion; (3) clock hands moving, car and ball moving, explosion; (4) explosion, ball and car moving, clock hands moving. When the students have made their choices, staple together the selected pages from the flipbook pads. See that all the students have a chance to flip through the new combinations.

You might conclude this activity with a brief discussion based on questions such as: "Did you like any of the combinations better than others?" "Why?" "What ways have we found that we can make a simple idea more complex?"

SUBJECT AREA(S)

Aesthetics and the Artist is the subject area of this film which explores who filmmakers are and where they get their ideas; idea that movement in film is an illusion and how it is created; basic structural elements of film—shot, scene, sequence—and how the filmmaker manipulates these to achieve a desired effect; process of planning and decisionmaking used to create a film; how films are edited and involvement in actual process of making a film.

INTENDED USERS AND BENEFICIARIES

The Filmmaker is being designed for 4th- and 5th-grade students. As with the other packages in the "Aesthetics and the Artist" series, it will be suitable for 6th-, 7th-, and 8th-grade students.

GOAL(S) OR PURPOSE(S)

The goals of *The Filmmaker* are for students (1) to perceive filmmakers as persons in the everyday world and as artists creating within their chosen medium; (2) to discover that the sources for filmmakers' ideas and for their own ideas are the same; (3) to explore the relationship between the visual, aural, and kinetic nature of film and how it is used by filmmakers to express ideas; and (4) to experience the process filmmakers use in creating a film.

PATTERNS OF USE

The Filmmaker, now in the prototype state, is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in film arts or linked with other Aesthetic Education Program packages related to music, art, dance, drama, and literature and which are clustered around "Aesthetics and the Artist."

ASSESSMENT PROVISIONS

Assessment for the learning activities will be designed during development of the instructional unit.

TIME REQUIREMENTS

The Filmmaker takes approximately 15 hours to complete. There are 18 activities which are of varying length of half an hour to 2 hours.

IMPLEMENTATION PROCEDURES

The Filmmaker does not require a specialist teacher. The various activities call for differing methods of instruction. Sometimes the students work independently and sometimes they work in groups.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training is able to implement this instructional package. Workshops are offered by the publisher and by CEMREL. Curriculum consultation is also available from CEMREL. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

The instructional unit, *The Filmmaker*, is presently in development. When completed it will be tested as defined in the *Basic Program Plan 1972*. At that time appropriate assurances and claims will be made.

RD 010 022

THE VISUAL ARTIST (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package suitable for grades 4-8 which introduces the visual artist as a real person

This set of instructional materials, one of the Aesthetics and the Artist Group of the *Five Sense Store* packages, introduces students to the visual artist as a real person whose chosen work is creating visual images based on perceptions, skills, personality, and experiences. The visual artist has responsibilities, commitments, and the same basic needs (food, clothing, and shelter) as other individuals. The visual artist communicates experience and feelings by selecting and shaping visual elements into a whole work. The quality that separates one artist from another is the way each artist organizes, interprets, and communicates personal perception of the environment in a visual mode. This quality is something that all visual artists have in common. Their choice of media and style is where they differ.

Visual perception consists of four types of vision: Practical, curious, imaginative, and aesthetic. In the process of creating visual images, the artist may perceive environment through all four types of vision, whereas most individuals will stop at the practical or curious level.

The emphasis of the package will be on the artist's perception and interpretion of environment through visual images. There will be an opportunity for the students to hear interviews with four artists, Marisol, Robert Indiana, George Segal, and Richard Hunt, in order to understand better what motivates them and how they live and work. An introduction to the visual artist will include a book of visuals which will show the relationship of the artist's work to the environment, sound tapes through which the artists communicate directly with the students, manipulatives, and an activity booklet. The activities in the booklet will reinforce the concepts of the materials and give the students the opportunity to put themselves in the role of visual artists.

Sample Lesson

Lesson 3: Artists Make Decisions

(For the Teacher)

Concept: Visual artists communicate their experiences and feelings by selecting and organizing visual elements into a whole work.

Objective of the Lesson: After they have completed this lesson, students should be better acquainted with the decisionmaking process that artists go through when they organize and reorganize visual images. Students should also be more aware of their own decisions, that is, why they choose the lines, colors, shapes, and textures that they use; why they use more of one than another; and how they use these elements to express their ideas.

(For the Students)

Getting Acquainted

When artists are in the process of creating works of art, they have to make many decisions. In order to put together an idea and express their feelings, they have to decide which kinds of lines, shapes, colors, and textures would go together. They must decide how to arrange them. Sometimes they arrange their ideas many times before they find a combination that works for them. They will sometimes do many drawings before they put together a final work of art. Sometimes artists do not plan ahead; they just experiment with their materials, making decisions as they work until they work out something that pleases them and expresses their idea. An accident might happen and the artist may decide to make it an important part of the final work. Artists are always making decisions.

Working From a Plan

Exploring and Imagining

Get out the black-and-white puzzle and the colored puzzle. Choose the one you want. You will use the puzzle parts to make a plan for a picture. Try using both puzzles.

Planning and Doing

Pick any card from the artist's idea pack. Arrange the puzzle parts in a way suggested by the idea you pick. Experiment with the parts until you find something you like. You may have to make many decisions until you decide exactly what you want your picture to look like.

After you finish your puzzle plan, you are now ready to make your picture. Find some drawing materials, paint, or magazines, scissors, and glue and make a picture of your puzzle plan.

Remember how the artists talked about their work. You may also want to write a story talking about how you planned and made your picture in the same way. Think about all the decisions you made, and tell about them in your story. Do this activity more than once.

Showing and Sharing.

Share your picture and your story with your teacher, parents, and classmates.

SUBJECT AREA(S)

The subject area is Aesthetics and the Artist: Visual art with emphasis on how perceptions, skills, personality, and experiences contribute to an artist's creation of visual images; where the visual artist gets ideas; how the artist organizes visual elements in a whole work to communicate experiences and feelings; and how different experiences and knowledge of individuals lead to different reactions and feelings about the same work of art.

INTENDED USERS AND BENEFICIARIES

The Visual Artist was formally tested with 5th-grade students. It is suitable for students from the 4th to 8th grades.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are for students: (1) To become more aware of things they see around them; (2) to investigate their own powers of observation and perception; (3) to learn how artists perceive the world around them; (4) to develop a general idea of how artists interpret perceptual experiences through their art forms; (5) to understand that, like artists, they create different products from the same ideas; and (6) to acquire an understanding of how personal characteristics are evidenced in art.

PATTERNS OF USE

The Visual Artist is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in art; linked with other AEP packages which are related to music, drama, dance, and literature and which are clustered around "Aesthetics and the Artist"; or used with perceptual development programs.

ASSESSMENT PROVISIONS

While there are no formal tests, student learning is assessed by both teacher and students. Analysis of student products and of their oral responses is the basic means of evaluating their learning. Guidelines for the evaluation are in the teacher's guide.

TIME REQUIREMENTS

The Visual Artist takes approximately 20 hours to complete. The time required for the activities varies with each one.

IMPLEMENTATION PROCEDURES

The Visual Artist does not require a specialist teacher. Students work in pairs through the package. The activities can be completely individualized and self-paced, or they can be done together in a large group. Or if the teacher prefers, a combination of the two methods may be used. A large display area for student work is needed. The teacher's guide outlines all procedures in a careful and interesting way. It has been rated as both very useful and original in testing situations.

The materials in *The Visual Artist* are in prototype stage. Based on the information in test situations about the durability of materials, we will design those in the final product to be as durable as possible.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

The information gathered from hothouse trial of the materials indicates that the package can stand alone in the hands of a competent teacher and can be successfully implemented without additional aid beyond that given in the teacher's guide. The developers have not received any reports of harm associated with the use of this product.

Packages are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such material in the package causes an appropriately directed review of the materials by a quaified person from outside of the program. The materials are revised to eliminate such shortcomings.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings of the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information about the utilization of the published version of the packages on a yearly basis.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

A prepublication version of this package has been tested in one local classroom containing students from grades 4, 5, and 6 and from a mixture of socioeconomic levels. No quantitative data yet exist concerning student learning, but the students indicated a high degree of satisfaction with the package in postpackage questionnaires. Based on recommendations from the teacher and an evaluator, the package is undergoing revision and is being continued in the testing cycle.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:	1 set per 6 students	Not determined

WRITERS: POETS, STORYTELLERS, AND PLAYWRIGHTS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A set of instructional materials which introduces 5th- and 6th-grade students to three different kinds of writers

This set of instructional materials, one of the Aesthetics and the Artist group of the *Five Sense Store* packages, introduces students to three different kinds of writers—poets, storytellers, and playwrights. The purpose of the materials is to develop the students' knowledge of the creative process through a study of the writers' relationship to their works. The materials are not intended to train students to be writers, although such training is a natural outgrowth of working with these materials, which include a creative writing file box. The students' understanding of the creative process is made more realistic as they work on their own short pieces of prose, poetry, and drama.

The materials involve students in various kinds of learning experiences. Students meet several writers via a student book, slide-tape presentations, recorded interviews, and printed interviews. They learn about these writers' interests, experiences, and attitudes.

The students see that writers, talented though they may be, are individuals involved with human, as well as artistic, concerns and that some of these concerns affect how the writers create and what they produce. Further, as students read the writers' works, they learn that the finished pieces of writing do not miraculously appear on the page, but are the result of the fascinating and sometimes frustrating creative process. In discussion, the students perceive and describe this creative process as it has actually shaped the finished piece of prose, poetry, or drama. They read comments and pieces by other writers working in the same form and see that the process varies, though each writer uses the same tools—words. They are introduced to some technical terms, such as "characterization" and "conflict," and perceive that the writers manipulate these elements according to their own needs.

During the final portion of each lesson, when the students try to express their own ideas in writing, they experience firsthand the challenge and excitement of the creative process. In the final activity, students produce books of their own writings or create together a group book of their writings.

Sample Lesson

(Addressed to Teacher)

Lesson 3: Sources of Some Playwright's Ideas

General Description: In this activity, the students learn how three playwrights conceived ideas for plays. They then try to use the method by which one playwright used to start writing.

Procedure: Tell the students that, of course, not every writer works in the same way and that they will read how three famous playwrights got started. Direct the students to the pictures and short biographies of the playwrights.

Reading and Discussing Comments by Playwrights: As the students read the short commentaries, encourage them to consider the playwrights' words carefully. Does any part of any story surprise them? Are they surprised, for instance, that Brown originally wrote his play as a poem? Have they read any poem in this book that might be turned into a play? (Peri Dwyer's *Compliance* suggests itself, since it described the situation that the poem depicts.)

Creative Writing Activity: Read with the class the following directions:

(Addressed to Students)

Now you try it. Think of a person whom you might write a play about. Choose someone you like to think about, someone you find interesting or curious. To create a story-idea, think of the most improbable or unlikely thing this person might do, just as Joseph Kisserling did in creating *Arsenic and Old Lace*. Don't try to write the whole play now. Choose the character and make up the story-idea first. That's how playwrights begin their plays.

SUBJECT AREA(S)

Aesthetics and the Artist: Literature.

Introduction of three different kinds of writers—poets, storytellers, playwrights; how human, as well as artistic, concerns of the writer affect what is created and produced; fascination and frustration of the creative writing process; introduction of the terms "characterization" and "conflict" and the way individual writers manipulate these elements; and actual process of creative writing by students.

INTENDED USERS AND BENEFICIARIES

This instructional package is being designed and formally tested with 5th- and 6th-grade students. It can easily be used with 8th- and 9th-grade students as well.

GOAL(S) OR PURPOSE(S)

The goals of *Writers: Poets, Storytellers, and Playwrights* are for students: (1) To perceive the writer as an individual with everyday human, as well as artistic, concerns; (2) to perceive how the creative process works, and the relationship of an individual writer's work; (3) to perceive that the creative process varies from writer to writer; (4) to perceive that different writers get very different ideas from the same sources; (5) to acquire the necessary critical insight into the creative process and language for such analysis and judgment that they are able to analyze and judge literary works; (6) to break down stereotypes in students' minds about writers; and (7) to produce their own pieces of writing, thus intensifying their understanding of the creative process.

PATTERNS OF USE

Writers: Poets, Storytellers, and Playwrights is a self-contained instructional package. It may be used as part of an ongoing curriculum in literature; linked with other Aesthetic Education Program units which are related to music, art, dance, and drama and which are clustered around "Aesthetics and the Artist"; or used with creative writing programs.

ASSESSMENT PROVISIONS

Informal assessment provisions are interspersed throughout the activities. Learning is assessed by teacher and student. Guidelines to aid the teacher in assessing student performance are built into the package.

TIME REQUIREMENTS

Writers: Poets, Storytellers, and Playwrights takes about 22 hours to complete. The 16 activities take from 30 minutes to 3 hours to complete and can be broken down into smaller class sessions.

IMPLEMENTATION PROCEDURES

Writers: Poets, Storytellers, and Playwrights does not require a specialist teacher. It is being tested with 5th- and 6th-grade students, but it can be used with students in 7th, 8th, and 9th grades as well.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

At this point, the materials have received a preliminary (hothouse) evaluation based upon daily observation of trial in one classroom. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from hothouse trial suggests that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide. The materials are being revised in preparation for pilot trial.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on utilization of the published version of the packages on a yearly basis.

At this time, only the hothouse trial has been completed. Information received as a result of this trial has confirmed that this package merits continued development. Necessary revisions are being made, and the package will be advanced to pilot trial.

INFORMATION CURRENT AS OF MARCH 1975 ■

ANALYZING CHARACTERIZATION (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package designed to help students in grades K-4 verbalize more descriptively their perceptions regarding people

Analyzing Characterization (part of the Aesthetics and the Creative Process group of the *Five Sense Store*) helps students to verbalize their perceptions more descriptively with regard to people and to realize that graphic depictions of real people can also be applied to fictional people. This ability makes stories and plays more enjoyable and appealing.

The students apply words which classify attributes of characterization in terms of sex, age, role or occupation, actions, speech, and feeling to the stimuli supplied in the package (photographs, oral statements, reading passages) and to their own creative products (drawings, improvisations, writings, and storytellings). It is hoped that by working with characterization in a number of disciplines, the students will observe that the ability to handle perceptions of this sort leads to greater understanding of people and characters within the spectrum of the environment and the various arts.

Sample Lesson

(Addressed to Teachers)

Lesson 1

Concept—With words we indicate perceptions such as sex, age, role, actions, speech, and feelings regarding a person.

Objective—The students will become familiar with some typical characterization words and being to recognize them. In this lesson they will work with person words (or nouns).

Procedure—Distribute the student booklet *People Are, People Do, People Feel*. Use the pages beginning "Do you know these person words?" (page 10) as the basis for a class discussion. Add your own questions to those given below. Because you know the children well, you will be able to personalize the questions.

1. "Do you know a policeman, a mother, a friend?"
2. "Has a fireman ever come to your house or to your school?"
3. "What is a friend like?"
4. "Do you know a woman who is a doctor?"
5. "Can a person be more than one thing at the same time—a doctor and a father, or a brother and a boy and a friend?"

After the students have begun to answer the questions, give a deck of person cards to each student. Tell the students that the words on the cards are the same person words listed on page 10 of their books. These words are also listed here as follows:

man
woman
boy
girl
father
mother
grandfather
grandmother
brother
sister
friend
neighbor
policeman
fireman
doctor
teacher
astronaut
janitor
waitress
salesman

Select a word, write it on the chalkboard, and ask a student to give impressions of the word. Elicit the students' impressions with questions such as these:

"Can a teacher be a mother?"

"How is a man different from a neighbor?"

"How is a brother different from a friend?"

Since this is not a vocabulary lesson per se, strive for general understanding of the word rather than a dictionary definition. Move quickly through several words.

Focus the attention of the class on the words as used in relation to real or imaginary people. Try to help the students become aware of a person being many things at one time.

Now have the children draw pictures to illustrate their person words. Have them follow the directions in their booklets. These directions are also listed here as follows:

Choose a person word.
Do not tell anyone what your person word is.
Write your person word on one side of your drawing paper.
Draw a person picture on the other side.
Make a person larger than everything else.
Make the person more colorful than everything else.

Draw things the person might use.
You may fill your whole drawing sheet.
When you finish your person picture, have your friends guess which person word you chose.

Tell the students that they should make the person indicated by the word they are drawing the most important element in the drawing by putting things the person might use into the drawing, by making the person larger and more colorful than anything else, or by filling the entire drawing paper with the face of the person word (drawing a portrait of the person).

After the drawing period, ask several students to share their drawings with their classmates by holding up their pictures. The other students should guess which word has been drawn. Although some drawings may be obvious (doctor, teacher, fireman), others may produce several correct responses. Discuss with the students whether one word is a better label than another for what is characterized in the drawing. If possible, put all the drawings on display in the classroom.

SUBJECT AREA(S)

Aesthetics and the Creative Process pertaining to language arts/literature is the subject area.

Words are a means of classifying and interpreting perceptions regarding people. Human characteristics as identified in photographs may be expressed by means of specific words. Some words are more specific and descriptive than others. Literature is not created only by professional writers; literature may be created by a child using words to convey thoughts and feelings about self and other people.

INTENDED USERS AND BENEFICIARIES

Although designed primarily for 2d-grade students, *Analyzing Characterization* can be used successfully with 3d and 4th graders.

GOAL(S) OR PURPOSE(S)

The purposes of this package are: (1) To introduce students to characterization as a phenomenon in the environment and the arts; (2) to expose students to the properties of a character's sex, age, role or occupation, actions, speech, and feelings; and (3) to help students transfer their perceptions of character from one artistic medium to others.

PATTERNS OF USE

Analyzing Characterization is a self-contained package with sequential and cumulative activities. It may be used as part of an ongoing curriculum in literature or language arts; linked with other AEP materials in the Aesthetics and the Creative Process group; combined with other AEP packages relating to character study, creative writing, or literature; and used with traditional English programs in teaching grammar and composition.

ASSESSMENT PROVISIONS

While there are no formal tests, learning is assessed by teacher and student. The first and last activities can be used as pretests and posttests. Guidelines for assessing student performance and oral response are built into the package.

TIME REQUIREMENTS

Analyzing Characterization requires approximately 10 to 15 hours to complete, depending on class size and the utilization of suggested optional and followup activities. There are 11 distinct activities, each requiring from 30 to 45 minutes.

IMPLEMENTATION PROCEDURES

Analyzing Characterization does not require a specialist teacher. This package has been tested with 2d-grade students but may be used with older children at the discretion of the teacher or curriculum specialist. The various activities in the package require students to work in large groups, in small groups, in pairs, and individually; some of the activities require rearranging the classroom. The improvisation activities will require space for meetings, practice, and performing.

Most of the activities serve as introductions to various artistic experiences; therefore the teacher is encouraged to present the activities in conjunction with regularly scheduled artistic periods. The materials may be used as stimuli for picture making, dramatic improvisation, and storytelling.

Summary Cost Information

Depending on classroom organization, units can be purchased in varying multiples of 6, such as 12-student, 18-student, and 24-student sets with teacher materials. Student materials and teacher materials can be purchased separately. Costs are figured on multiples of the base price per six-student-and-teacher module. The cost for one unit has not yet been determined.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this unit of instruction. Workshops are offered by the publisher and curriculum consultation is available from CEMREL. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of varying ethnic and socioeconomic characteristics. The developers have received no reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers monitor a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on a yearly basis.

The pilot evaluation of this package was carried out with 2d-grade students in local schools. Specially constructed tests indicate that students who received package instruction were better able to analyze characterization than those students who were not taught the package. Student and teacher satisfaction with the package was high as measured by post-treatment questionnaires.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials: 6 *People Are, People Do, People Feel* (books) 6 *Queens, Kids and Other People* (books) 6 sets of word cards (58 cards per set)	1 set per 6 students	Not determined

RD 010 025

ARRANGING SOUNDS WITH MAGNETIC TAPES (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which involves 3d graders and older students in the creative process

Part of the Aesthetics and the Creative Process group of the *Five Sense Store* packages, *Arranging Sounds With Magnetic Tapes* involves students in the creative process as they select and arrange prerecorded sounds. Students juxtapose sounds of different rhythms and tone colors, such as squealing pigs, hilarious laughter, or sonic pings, and manipulate their durations. An introductory tape explains and illustrates simple arranging with taped sounds. A library of 20 taped sounds, a splicing block with attached takeup reel and scissors, a set of student direction cards, and graphically illustrated charts are the students' tools. As they arrange selections from the sound library, students discover how to use time, sound quality, and other elements of sounds to produce compositions having unity and balance. As they make decisions about the planning and construction of their sound arrangements, they are involved in the same creative process experienced by the arts in music and other arts areas.

This package will encourage students: (1) To develop mechanical skills—cutting and splicing—required for working in the medium of taped sounds; (2) to appreciate, through exposure to different and unusual sounds, the wide range of sounds and music in our contemporary society; (3) to experience form through using repetition, duration, and silence in developing a theme; and (4) to become aware of the creative process engaged in by arrangers and composers through selecting and arranging sounds to create a theme and variations.

Sample Lesson

(Addressed to Teachers)

Lesson Four: Creating a Theme and Variations

Concept: An awareness of the creative process engaged in by the arranger-composer can be gained by selecting and arranging sounds to create a theme and variations.

General Objective of the Lesson: The students will add yet another dimension to their arrangements by varying the order, as well as the duration, of three selected sounds.

By now the process of developing a theme by repeating three or four selected sounds should be familiar. In this lesson students are asked to repeat selected sounds in combinations and with variations they choose. In other words, they will be creating a theme and variations.

Listening time for the arrangements may be scheduled at your discretion. If the students seem eager to hear their works, you might schedule a listening period immediately after the teams have completed the splicing process. The maximum time for each arrangement will be 3 minutes (20 sounds, 9 seconds each), and most will probably be 2 minutes or less. Therefore the listening time will not be extensive.

Now distribute Sound-Action Card I to your students and let them proceed with the lesson.

(Addressed to Students)

Sound-Action Card I

This time arrange a three-sound theme. Do everything you did for Sound-Action Card F and add one more step: Change the order of the sounds in your theme each time you repeat it. By changing the order as well as the length of the sounds, you will be creating a theme and variations.

Variations are new forms of a theme. Repeat your theme and variations until your holding board is filled. Remember to think carefully about how the sounds sound. Talk it over with your teammates before choosing your sounds. Write your arrangement out on your holding board. Cut and splice it as you did before.

Choose a title for your arrangement that describes what it is like. Then introduce and play your arrangement for the other teams and listen to their arrangements. Describe the feeling you wanted to give with your original theme. Did changing the order of the sounds in your theme change the feeling your theme gave? If it did, describe the feeling that the variations on your theme gave to you. Ask your classmates how they felt about your theme and variations.

SUBJECT AREA(S)

Aesthetics and the Creative Process: Music

Proficiency in the mechanics of cutting and splicing tape, exposure to different and unusual sounds in order to enhance student appreciation of the wide range of sounds and music in contemporary society, selection and arrangement of sounds to create a theme and variations, decisionmaking about the aesthetic quality of sound-tape arrangements.

INTENDED USERS AND BENEFICIARIES

Although *Arranging Sounds With Magnetic Tapes* was formally tested at the 3d-grade level, it has been used successfully with 3d-grade students to juniors in high school. It has also been used with adult groups.

GOAL(S) OR PURPOSE(S)

The primary purpose of this package is: (1) To let students encounter the creative process through the selection and arrangement of sounds to gain an awareness of the arranger-composer's art and (2) to expose students to different and unusual sounds so that they can better appreciate the wide range of sounds and music in our culture.

PATTERNS OF USE

Arranging Sounds With Magnetic Tapes is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in music; linked with the other music-based packages developed by the Aesthetic Education Program to create a curriculum; or used with other AEP packages which are related to art, dance, theater, and literature and which are clustered around Aesthetics and the Creative Process.

ASSESSMENT PROVISIONS

While there is no formal testing, learning is assessed by the teacher and the students. Student products are examined and analyzed, and the final composition can be used as a posttest of the package. Guidelines for informal evaluation are built into the package.

TIME REQUIREMENTS

Arranging Sounds With Magnetic Tapes takes approximately 11 hours to complete. The activities are done in time periods of 45 to 60 minutes.

IMPLEMENTATION PROCEDURES

Arranging Sounds With Magnetic Tapes does not require a specialist teacher. It is most effective when an entire class or as many students as possible use the materials simultaneously. Although the students work in teams of three, the reaction of the three-student teams to one another's arrangements is a very important part of the package. The teacher's guide outlines all procedures for the teacher and has been rated as useful in field trials.

The teacher is encouraged to have the students move into independent experimentation with tape composition.

Field reports indicate that the materials stand up well with repeated classroom use. Consumables are minimal and can be purchased from the publisher.

Summary Cost Information

This package can be purchased in sets of varying multiples of 6, e.g., 12-student, 18-student, or 24-student sets. Student materials and teacher materials can be purchased separately so that only one teacher set need be purchased with two, three, four, or five student sets. Cost for one complete set containing enough materials for one teacher and six students is $255.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in music can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials.

The pilot evaluation of this package was carried out with 3d-grade students in local schools. Teachers reported that students were able to master such technical skills as splicing, delighted in engaging in the creative process of arranging sounds, and appeared to be more aware of sounds in their environment. Both teachers and students indicated a high degree of satisfaction with the materials, as indicated by postpackage attitude measures.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials: 2 holding boards 2 rolls, blank tape 100 sheets, editabs (90 per sheet) 2 splicing blocks 2 rolls, masking tape 2 grease pencils 2 sets, sound-action cards (12 cards per set)	1 set per 6 students	92.50*	Blank tape, editabs, masking tape, and Sound Library tapes consumable yearly	
Teacher materials: 1 sound library board 1 set, sound library tapes (20 per set) 1 Information-narration tape 1 set of charts (3 per set) 1 teacher's guide		162.50*

CONSTRUCTING DRAMATIC PLOT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A series of games in which 3d-grade students begin to see how a playwright achieves unity in a play

A part of the third series of the *Five Sense Store* packages, Aesthetics and the Creative Process, *Constructing Dramatic Plot* is designed as a series of three games, each posing specific problems. By selecting and arranging the elements of dramatic plot structure—characters, setting, incidents, conflict, crisis, and resolution—the students solve the problems and begin to see how a playwright uses these elements to achieve unity in a play and how heightened interest in the audience is created. Colorful game boards and rule sheets for each of the three games are used with card decks presenting specific examples of each of the elements. An incident card might read "Someone surprises someone else (how?)," and a student incorporates this into a plot about, for example, a birthday party. Diagnostic activities precede the games and can be used to guide students to the most appropriate beginning game level. Groups of three students play the games together.

This package will encourage students to use card decks to select characters and setting and to link a series of incidents to create a simple but logical story (game 1); to use card decks to create a simple but logical story with characters, setting, a conflict, and incidents (game 2); to use card decks to create a simple but logical plot with characters, a setting, conflict, incidents, a crisis, and a resolution (game 3); and to act out their dramatic plots.

Sample Lesson

(Addressed to Teachers)

GAME 1

Concepts: A dramatic plot begins to be developed by linking a series of incidents. A dramatic story includes characters and a setting.

Objectives: The student will use a card deck to select characters and a setting for a dramatic story. The student will use a card deck to select and link a series of incidents to create a simple but logical story.

GAME 1: RULES (addressed to students)

Aim of the game.

This is a game in which the players work together to make up the best possible dramatic story. You will use character-setting cards, incident cards, and imagination cards to make up your story. All the cards must make sense together.

1. One, two, or three may play.
2. Set up the game board with the character-setting card deck, incident card deck, and the imagination card deck.
3. Choose any one of the character-setting cards for your story from the character-setting card deck. All players must agree on the card. Put the card face up on the top of the deck.
4. Decide who goes first, second, and third.
5. Player 1 chooses any one of the incident cards to start the story. Place the incident card on the first space on the game strip. All the players must agree with the choice.
6. Player 2 does the same, but places his incident card on the next blank space on the game strip. All the players must agree with the choice.
7. Player 3 does the same thing. All the players must agree with the choice.

Special Rules:

1. The incidents in the story must make sense together.
2. The incidents must make sense with the characters and setting.
3. All the players must agree that the incidents, characters, and setting make sense together.
4. If you cannot make an incident card fit into the story, you may use an imagination card and make up your own incident.
5. When you have finished a story, show it to your teacher and answer these questions:

Who are the characters in your story?
What is the setting for your story?
What are the incidents in your story?
If your answers are correct, your teacher will tell you what game to play next.

AESTHETIC EDUCATION

RD 010 026

SUBJECT AREA(S)

Aesthetics and the Creative Process: Theater arts.

Introduction of the term "dramatic plot" and how it functions in a dramatic structure; process of selecting and arranging the elements of dramatic plot—incidents, setting, characters, conflict, crisis, and resolution—into a story.

INTENDED USERS AND BENEFICIARIES

Constructing Dramatic Plot was tested with third graders but may be used with older or younger students at the discretion of the teacher.

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are: (1) To lead students to an understanding of dramatic plot structure by having them manipulate the elements of dramatic plot in the development of their own plots, and (2) to begin to see how a playwright uses these elements to achieve unity in a play and create heightened interest in the audience.

PATTERNS OF USE

Constructing Dramatic Plot is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in drama; linked with other AEP packages which are related to music, art, dance, and literature and which are clustered around "Aesthetics and the Creative Process"; and used with language arts programs.

ASSESSMENT PROVISIONS

A student progress chart can be used as a guide for establishing a recordkeeping system for students' work. Two diagnostic activities are included with the materials and are suggested for pre- and post-instruction. Throughout the activities the student-learning is assessed by both teacher and students. Appropriate guidelines for assessment are built into the teacher's guide.

TIME REQUIREMENTS

The activities in *Constructing Dramatic Plot* take from 10 to 15 hours of actual playing time to complete.

IMPLEMENTATION PROCEDURES

Constructing Dramatic Plot does not require a specialist teacher. The package may be handled as a group activity, or students may progress through the games at their own pace on a small-group basis. Diagnostic activities can best be administered on a group basis (3 students minimum). Students will need more space than the conventional desktop. An area approximately 8 by 8 feet would be sufficient. The teacher's guide outlines all procedures for the teacher and has been rated as quite useful in field trials.

The teacher is encouraged to relate the activities in this package to examples of dramatic plot in professional plays, TV programs, films, cartoons, new articles, and real-life events in school and the community.

Field reports indicate that the materials stand up well with repeated use in the classroom.

Summary Cost Information

Packages can be purchased in varying multiples of 6-student sets; for example, 12-student, 18-student, 24-student sets. Student and teacher materials can be purchased separately, so that only one set of teacher materials need be purchased with two, three, four, or five student sets. Cost for one complete unit containing enough materials for one teacher and six students is $60.00.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

The information gathered from pilot trial of the materials and subsequent use in 41 States indicates that the materials can stand alone in the hands of a competent teacher and be successfully implemented without additional aid beyond that given in the teacher's guide. The developers and publishers have not received any reports of harm associated with the use of this product.

Packages are carefully scrutinized to eliminate any f[illegible] of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such material in the package causes an appropriately directed review of the materials by a qualified person from outside of the program. The materials are revised to eliminate such shortcomings.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States, using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program.

Second, there must be evidence that the materials can stand alone in the hands of a competent teacher. Third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program has continued to gain information on the utilization of the published version of the package on a yearly basis.

The prepublication evaluation of this package was carried out with students in grades 2, 3, and 4 in local schools. A specifically constructed test indicated that students who received package instruction were better able to construct a dramatic plot than students who were not taught the package.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:	1 set per 6 students	45.00*	Diagnostic activity sheets consumable yearly	
2 sets of 3 game boards 2 sets of rule sheets for each game 2 boxes of game cards (145 cards in each box) 60 diagnostic activity sheets				
Teacher materials: Teacher's guide (24 pp.) Set of 21 sample plot cards		15.00*		

*Price subject to change.

CREATING CHARACTERIZATION (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package used primarily with 3d graders which deals with the physical and vocal expression of emotion in the theater

The Aesthetics and the Creative Process series of the Aesthetic Education Program (AEP) includes this instructional package, which deals with the physical and vocal expression of emotion in a theatrical characterization. The primary student uses a broad range of instructional materials—photographs showing physical expression of emotions, a puzzle that can be put together in a variety of ways to show a single emotion, masks, a filmstrip, and a recording presenting vocal expression of emotion. These materials stimulate exploration and activity that allows students to synthesize an emotional characteristic with their own voices and bodies. The improvisations are evaluated by fellow students, always with emphasis on the discoveries taking place rather than on the presentation of a polished performance. A satellite lesson explores the characterization problem with color or texture as ways to express an emotion theatrically.

This package will encourage students to look at the pictures in the emotion book and discuss how the emotion in each picture is expressed nonvocally; to arrange characterization picture composites to demonstrate that they have learned that character emotions can be expressed by the face, arms/hands, and legs/feet, as well as by the whole body; to imitate the picture composite they have arranged; to select an Emo mask and attempt to express its emotional trait through use of body movement and voice, both separately and in combination; to attempt to create a voice and movements for either an angry, a fearful, or a happy character and to present a group improvision; and to select a color and a texture and attempt to express related emotional traits.

Sample Lesson

(Addressed to Teachers)

This lesson familiarizes the student with the word "emotion," encourages conscious thinking about the range of emotions, and helps discovery of how a character's emotional traits can be expressed nonvocally (physically).

The emotion book contains photographs of different people expressing emotions physically. The first photographs emphasize emotional expressions on the face, then expression of emotion by the arms/hands, legs/feet, and, finally, full-figure views show emotional expression by the whole body. The student will gain some understanding of nonvocal emotional expression through a discussion of each picture with the teacher.

There are no "correct" answers in the student's response. Two students looking at the same picture may interpret the same nonvocal cues differently. This is all right as long as the students attempt to explain their decisions. Expecting "correct" answers may force a stereotyping and lead students to read the cues as they think they should be read, rather than to explore individual perceptions. You may wish to discuss this difference in perception as an interesting phenomenon.

The emotion word list is provided as a resource to indicate a range of vocabulary to aid in the discrimination of emotion description. It is realized that the list is not definitive; students may wish to add words. It is also realized that some words are not commonly used in all of the lower primary. It is hoped that the list will help to increase descriptive vocabulary of emotional characteristics and that the teacher will use as many of these words as possible that are appropriate to a specific class.

In the review, it should be reinforced that various parts of a person can express an emotion and that by putting parts together, the "whole person" can express an emotion. Each student should understand the concept of the lesson. Discussion about nonvocal cues around the school and the home might be desirable. Students may be able to imitate how the teacher or their parents express emotions without talking.

SUBJECT AREA(S)

The purpose of this instructional package is to enable students: (1) To know that there are different modes of nonvocal and vocal expression of emotions; (2) to know that the portrayal of emotion in a theatrical context is a deliberate decisionmaking process; (3) to perceive and describe the relationship between the voice, the movement, and the emotions of a character as expressed by the actor; and (4) to synthesize elements of characterization and create simple characterizations within improvisations.

PATTERNS OF USE

Creating Characterization is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in drama; linked with other "theater-based" units developed by the Aesthetic Education Program to create a curriculum; linked with other AEP units which are related to music, art, dance, and literature and which are clustered around Aesthetics and the Creative Process; and used with Language Arts Programs.

ASSESSMENT PROVISIONS

Learning is assessed by the teacher and by the students. Students take a pretest which can also be administered as a posttest. The teacher is provided with observational "clues" as well as questions to assess learning for each activity. Teacher and student evaluation sheets, as well as guidelines to interpret them, are provided to assess the final improvisations performed by the students.

TIME REQUIREMENTS

Creating Characterization takes approximately 10 hours to complete depending on class size and utilization of suggested "additional activities." Teachers generally take about 45 minutes per day, 2 to 3 days per week.

IMPLEMENTATION PROCEDURES

Creating Characterization does not require a specialist teacher. This instructional unit has been tested with students in the 3d grade, but may be used with younger or older students at the discretion of the teacher or curriculum specialist. It is recommended that *Creating Characterization* be taught in small groups to enhance interaction and to allow the teacher to respond specifically to each student. Students will require more space than a small desk; they will need room to spread out their materials so that they will not conflict with others. The teacher's guide outlines all procedures for the teacher and has been rated as quite useful in field trials.

The teacher is encouraged to relate the activities to theatrical experiences by having the students analyze television programs and attend "live" theater performances, and by bringing theater artists into the classroom.

Field reports indicate that the materials stand up well with repeated use in the classroom. Consumables are minimal and can be purchased from the publisher.

Summary Cost Information

Depending on classroom organization, units can be purchased in varying multiples of 6, e.g., 12-student, 18-student, 24-student sets, with teacher materials. Student materials and teacher materials can be purchased separately. Costs are figured on multiples of the base price per six-student and teacher module—cost for one unit containing enough materials for the teacher and six students is $85.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this unit of instruction; workshops are offered by the publisher and the laboratory as well as curriculum consultation by the laboratory. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program has continued to gain information on a yearly basis.

RD 010 027

The prepublication evaluation of this unit was carried out with 3d-grade students in local schools. Specially constructed tests regarding the basic goals of the package compared students taking the package to other students. The results showed that students exposed to the unit were significantly superior in understanding important aspects of theatrical character development. Student and teacher satisfaction with the materials was also high, as measured by a posttreatment attitude scale.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials including books, puzzles, masks, texture samples, pretest and posttest sheets, and student evaluation sheets	1 set per 6 students	52.50*	Test and evaluation sheets consumable yearly	
Teacher materials including guide, filmstrip, record, theatrical gels, emotion cards, wall chart, and evaluation sheets		32.50*		

*Price subject to change.

INFORMATION CURRENT AS OF MARCH 1975 ■

CREATING WITH SOUNDS AND IMAGES (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which helps students in grades 3-4 to become aware of various means of communication

This package, part of the Aesthetics and the Creative Process group of the *Five Sense Store*, helps students become aware of various means of communication. Through the use of drawings, photographs, and slides, students learn how images communicate without the use of words. This concept is expanded as the images are matched with sounds. Students explore the importance of sequencing images and sounds by creating part or all of an image sequence. Further, they create their own images, sounds, and narration to make a total presentation.

This package encourages students to participate in our image- and sound-laden society with greater awareness of image/sound communication, to evaluate the effectiveness of communications, and to communicate their own thoughts and feelings with images and sounds.

Sample Lesson

(Addressed to Teachers)

Lesson 3

General Description: The students learn the meaning of the word "image." Then they examine a set of photographs to find images that convey specific images.

Procedure: Divide the students into small groups and give each group a set of photographs that are provided in the package.

Explain that you will give them some problems which they will solve by selecting photographs. Begin with one problem as an example:

"Find an image that shows a sad person. Look through your photographs and find one that shows someone looking very sad."

The students may not all choose the same photograph as the solution to a particular problem. Do not say that there is any one correct answer, but do ask the students to give a reason for their selections. Say, "What is it about that person that looks sad to you, Luther? Do you agree, Maria? Did you pick the same image?"

Start the students on the problems having the most concrete solutions. Only when the students seem to have thoroughly grasped the idea should you move into those areas with less concrete and less familiar solutions. Here are a number of problems you can use. You may think of some others you like and feel are suited to your class.

Find an image that shows you how to make something.
Find an image in which someone is angry, happy, or sad.
Find an image that tells you how something is put together. How can you tell?
Find an image that shows something you might see in a dream.
Find an image that makes you feel sad, happy, angry. What shows you that?
Find an image that shows you something very exciting. Why do you think that's exciting?

It is important that your students give reasons why they identify certain images as being sad, happy, angry, or building something. It is not so important that everyone agrees with the particular reasons.

Finish the activity by asking the students what they discovered from solving the problems you gave them. They should say (in their own words) that images communicate and that each of the pictures told them something. If none of the students says this, or if there does not seem to be a general understanding of the concept, be very specific in pointing it out. You might say, "This picture tells us . . . this image shows . . . in a way different from words, that we get messages from images, messages about things that are not right in front of us.".

SUBJECT AREA(S)

Aesthetics and the Creative Process: Visual arts, music, communications, and language arts.

Images and sounds communicate. A sequence of images and sounds can present a more extensive communication than a single image or sound. The meaning of a single image changes when it becomes part of a sequence or when there is a change in the order of images within a sequence.

RD 010 028

INTENDED USERS AND BENEFICIARIES

Creating With Sounds and Images has been tested with 2d- and 3d-grade children, but beginning 2d-graders found the package difficult to master. The materials work best with 3d- and 4th-graders and older children.

GOAL(S) OR PURPOSE(S)

The purposes of this set of materials are to teach students that images and sounds communicate, that more complex and detailed communications require a number of images and sounds, that the meaning of a sequence changes if there is a change in the order of its images, that timing plays an important part in putting images and sounds together, and that there are many elements involved in communicating with images and sounds.

PATTERNS OF USE

Creating With Sounds and Images is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an elementary art curriculum, a language arts curriculum, or a communications curriculum; linked with other Aesthetic Education Program (AEP) packages in the Aesthetics and the Creative Process group, especially the *Constructing Dramatic Plot* package; and used to develop group process skills.

ASSESSMENT PROVISIONS

Informal assessment provisions are interspersed throughout the activities. Learning is assessed by teacher and student. Guidelines to aid the teacher in assessing student performance are built into the package. Storyboard response sheets provide a structure for assessment of student work, and the package's culminating activity provides a setting for the assessment of overall effectiveness.

TIME REQUIREMENTS

Creating With Sounds and Images requires approximately 15 hours to complete, depending on class size and utilization of suggested additional activities. Daily allotted time varies from 15 to 45 minutes per activity. The package takes about 25 days to complete.

IMPLEMENTATION PROCEDURES

Creating With Sounds and Images does not require a specialist teacher. This package has been tested with students in grades 2 and 3, but may be used with older students. It is recommended that it be taught in small groups to enhance interaction and allow the teacher to respond specifically to each student.

Field reports indicate that the package demands a basic social maturity in the students if the group experiences are to be productive, but on the whole the package was well received and was rated as excellent for its concepts and activities.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, Viking Press, and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials.

After the pilot trial of the materials, the program continues to gain information on utilization of published materials on a yearly basis.

The prepublication evaluation of this package was carried out with 2d- and 3d-grade students in local schools. Special instruments of measurement were developed to assess the outcomes of instruction with the materials. These instruments revealed that students working with package materials earned significantly higher scores than control group students on measures of technical vocabulary. Students using the package scored significantly higher than others on a performance measure of ability to communicate by using a synthesis of sounds, images, and narration. This information supports a claim of package effectiveness. Student satisfaction with the materials was indicated by their responses to two preference scales. Teacher satisfaction was indicated by responses to an imbedded questionnaire and a terminal questionnaire and interview. Two outside experts reviewed the content of prototype materials and responded favorably.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:				
24 slide mounts	6 per student	Not determined	Storyboard pads and acetate pads are consumable yearly	
2 pads of acetate for making slides	3 sheets per student

RD 010 029

CREATING WORD PICTURES (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which encourages students in grades 2-4 to explore the English language as a tool for effective communication

Creating Word Pictures (part of the third series of the *Five Sense Store* packages, Aesthetics and the Creative Process) encourages students to explore the English language as a tool for effective and imaginative communication, both oral and written. Each student has a Word Book which is a comic-book-style guide that explains concepts, directs activities, and reinforces learning. It is used in combination with a diagnostic activity, recording sheets, a set of word cards, a word-card sheet, and the "What is...?" game—materials that allow students to progress at their individual pace.

This package will encourage students: (1) To describe verbally the sensuous connotations of words they select; (2) to manipulate the blue word cards by combining two words to produce specific, original, or humorous images; (3) to recognize that the word picture made by two words can be changed by transposing them; for instance, will describe their senuous perception of both word pictures through written or verbal means, and by making related drawings; (4) to create their own word pictures with the word cards; (5) to select words to find various answers that correspond to the sensuous properties of the definitions given on the "What is...?" game cards; (6) to manipulate word cards, changing the subject to effect major changes in their word pictures and changing verbs and modifiers to make minor changes; and (7) to demonstrate that they can use words creatively to communicate thoughts effectively by using the word cards to construct complete thoughts and sentences, by discussing the sensuous properties of the words they use, and by experimenting with word combinations until reaching one they find acceptable.

Sample Lesson

(Addressed to Teachers)

Activity 9

Concept—Words are symbols that are used to communicate ideas.

Objectives—Students will demonstrate that they can use words creatively to communicate thoughts effectively by: (1) Using the word cards to construct complete thought, (2) using the word cards to construct complete sentences, (3) discussing the sensuous properties of the words used, and (4) experimenting with word combinations until reaching one that is acceptable.

Encourage students to keep a written record of their work. (Successful examples of each numbered objective listed above follow.) To evaluate the students' work, be familiar with the guidelines below and with the general criteria on pages 9-12. In observing their work, in talking with them about their work, and in reading what they produce, emphasize specificity and originality to the students.

1. The students should be encouraged to construct complete thoughts. Students should be allowed to use the words that they "need" even though the words do not appear on any of the word cards. At the same time, they should be aware of the possibilities and flexibility of the words already included.

Allow the students as much time as they need to complete their work. For example, one student worked for 30 minutes and wrote one statement: "flower I love you."

2. The student should begin to use sentences to express a thing. Building clauses and phrases can be a preliminary necessity and is a verbal activity in itself.

Crawl like a spinning jump; a gallop in the winter like a jump; ancient will happen; sleepy in the day will frighten you.

Although these are not complete statements, they do indicate a probing and a discovery. (Examples: I "Cam" ancient; ugly black winter; and black lady is weak; when I come; is rusty weak black sleep alone.)

3. The student should be able to discuss with the teacher and classmates the sensuous properties determined through a choice of words. Example:

Once an old empty ancient submarine ship was quiet and rusty in Germany. Inside the ancient submarine ship "was" a million sticky spiders. An old sleepy Indian spider. He thought it was a nice home. Because it was quiet. He liked quiet places. Because he was very very old. He was so sleepy he went back to sleep. The old empty ancient submarine was "know" again quiet.

4. The student should experiment with possibilities of arrangement. Examples of student combinations:

An elephant and I laugh in the closet.
An old elephant and I laugh and crawl in the closet.
The old electric bridge will come and go.
The old electric bridge will come in winter and go in spring.

SUBJECT AREA(S)

Aesthetics and the Creative Process including communication arts/literature is the subject area.

Words are symbols that can be used to communicate sensuous characteristics and ideas. Precise images or thoughts can be communicated by carefully choosing and arranging words, and altering words used as modifiers will alter the sensuous perception of the thing that they modify.

INTENDED USERS AND BENEFICIARIES

Creating Word Pictures is designed for 2d-, 3d-, and 4th-grade students.

GOAL(S) OR PURPOSE(S)

The purpose of this instruction package is to enable students to increase their ability to communicate effectively and imaginatively in the English language, both orally and written by means of creating novel word combinations, describing the connotations of words, and drawing specific and meaningful analogies.

PATTERNS OF USE

Creating Word Pictures is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in literature; linked with other AEP units relating to music, art, dance, and drama in the "Aesthetics and the Creative Process"; or used with language arts programs.

ASSESSMENT PROVISIONS

Guidelines for informal assessment procedures are provided in the teacher's guide. The relevant criteria for evaluating a particular activity are listed in the notes for the activity. As each student moves through an activity, progress is recorded on a "Record of Activities" sheet. A diagnostic pretest activity is provided to find the entrance level of competency of each student.

TIME REQUIREMENTS

Creating Word Pictures takes approximately 9 hours to complete, depending upon the number of students a teacher has and whether students are divided into groups when working with the package. The various activities within the package require from 15 to 45 minutes.

IMPLEMENTATION PROCEDURES

Creating Word Pictures does not require a specialist teacher. This instructional package has been tested with students in the 2d, 3d, and 4th grades but may be used with older students at the discretion of the teacher. There are various possibilities for structuring the activities in this package. The teacher may instruct the whole group on what to do and then allow smaller groups of three students to work at various times, or the teacher may set aside a specific time in which the whole group will work on the instructions and activities. Individual students or small groups could work independently with the materials and proceed at their own pace.

The teacher is encouraged to extend the concepts in this package to the analysis or writing of poetry.

Summary Cost Information

Packages can be purchased in varying multiples of 6, such as 12-student, 18-student, or 24-student sets. Student and teacher materials can be purchased separately so that only one set of teacher materials need be purchased with two, three, four, or five student sets. The cost for one complete unit containing enough materials for one teacher and six students is $59.95.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies discovered as a result of the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the packages on a yearly basis.

The prepublication evaluation of this package was carried out with 3d-grade students in local schools. A specially constructed test indicates that students who received package instruction were better able, to a moderate degree, to write descriptions using a given stimulus than those students who were not taught the package. Student and teacher satisfaction with the package was high as measured by post-treatment questionnaires.

MATERIALS AND EQUIPMENT

EXAMINING POINT OF VIEW (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which introduces the conceptual and physical aspects of point of view to 2d graders and older students

The Aesthetics and the Creative Process group of the *Five Sense Store* packages includes this package, which introduces the conceptual and physical aspects of point of view and helps students find and show their own points of view with a camera. Two basic premises of photographic art are presented: First, the artist uses the camera viewfinder as a tool in expressing self; and second, the artist, when manipulating point of view, uses the environment as a content source. The *Point of View* book presents examples of photographic techniques for showing ideas and suggests criteria for judging the expressiveness and the aesthetic quality of a photograph. Students use a range of additional materials, from cutout frame corners to a Polaroid camera, to learn that photography is an artistic vehicle that can be used to present one's own point of view.

This package will encourage students: (1) To form a personal definition of point of view; (2) to express their visual points of view through use of a viewfinder and camera; (3) to delimit subject matter, select view, and create perspectives in their photographs; and (4) to attach personal preference to their photographic decisions—selection, editing, and combination—and discuss their preferences.

Sample Lesson

(Addressed to Teachers)

Lesson 2: The Camera is a Tool to Show Points of View

Concept: The medium of photography can be used to express one's unique point of view.

Objective: The students will become familiar with the basic parts and operations of a camera, and will take practice photographs.

These pages link Section 1, in which students explored various definitions of point of view, to the remainder of the book. Here the camera is presented as a mechanical tool for expressing one's own point of view in photographs.

A short conversation can help students use the book as a tool for investigating photographic expression of point of view. Ask, "Do you think that if each of you had a camera, all of you would take the very same photograph?" Students' answers will build on any of their experiences in defining point of view (for example, the fact that no two students made the same drawing in response to a description of an imaginary thing).

Be sure that the students read through all the "things to remember"—these are common mistakes made by beginning photographers. Then, during some break in the day, take the students outside in a group, or in small groups, and let them take one or two practice photographs. Remind them of the "things to remember" and of the instructions for operating the camera, and help them to build confidence in their picture-taking ability. Check each student to be sure the camera is being correctly operated. Keep a record of which student took which photograph. The easiest way is to jot down the number from the back of the film cartridge next to the student's name.

After you are familiar with the operation of the Polaroid camera, let the students take some Polaroid pictures. Being able to see a picture immediately will help the "things to remember."

If each student takes a photograph of another student, all will have a personal photograph that will demonstrate the "things to remember," as well as provide a photographic identification for their photobook.

SUBJECT AREA(S)

Aesthetics and the Creative Process: Photography.

The several definitions of point of view, all of which are helpful in perceiving and analyzing things and ideas; photography as a medium to express one's unique point of view; process of selecting subject matter from the environment; manipulation and selection of distance, angle, and view; use of different angles, views, distances, and points of view to create photographs; use of photographs to create a photo essay showing one's own point of view.

INTENDED USERS AND BENEFICIARIES

Examining Point of View has been formally tested with students in the 2d-grade. It has been successfully used, however, with students in the 3d to the 7th grade.

RD 010 030

GOAL(S) OR PURPOSE(S)

The major goal is to help students understand two basic premises of photographic art: (1) That the artist uses the viewfinder and camera as expressive instruments for visual statements; and (2) that the artist, through manipulating point of view, draws on the environment as a source for inspiration and expression.

PATTERNS OF USE

Examining Point of View is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in photography; linked with other AEP packages which are related to music, art, dance, literature, and theater and which are clustered around "Aesthetics and the Creative Process"; or used with programs in other disciplines, such as, social studies, to which the concept of *"Point of View"* is applicable.

ASSESSMENT PROVISIONS

While there are no formal tests, teacher and students assess learning by analyzing the photographs taken by the students. Guidelines for the analysis are built into the package.

TIME REQUIREMENTS

Examining Point of View requires a minimum of 20 hours to complete, excluding the final photographic essay. Each section requires at least 2 hours to do, but the time periods can be further broken down at the teacher's discretion.

IMPLEMENTATION PROCEDURES

Examining Point of View does not require a specialist teacher. Students work on small-group and individual bases at various times during this package and work both indoors and outdoors. Many of the activities require students to move about, perhaps to get up on a table or down on the floor. In addition, students need freedom to move around the whole classroom. The teacher's guide outlines all procedures and has been rated as quite useful in field trials.

The teacher is encouraged to relate the concepts in this package to other arts areas.

Field reports indicate that the materials stand up well with repeated use. Consumables are easily purchased from the publisher.

Summary Cost Information

Examining Point of View can be purchased in sets of varying multiples of 6, such as, 12-student, 18-student, or 24-student sets. Student materials and teacher materials can be purchased separately so that only one teacher set need be purchased with two, three, or four student sets. Cost for one complete unit containing enough materials for one teacher and six students is $31.45.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training in photography can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revisions, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the packages on a yearly basis.

The pilot evaluation of this package was carried out with 2d-grade students in local schools. Specially constructed tests regarding the basic goals of the package compared students taking the package to untreated students. Treated students taking a photograph of a single subject used a greater variety of points of view after the package than before. They also were able to identify one aspect of point of view significantly better than the untreated students on a matching test. Student satisfaction with the materials was also high, as measured by posttreatment attitude scales. Limited use in the extended pilot studies has confirmed these findings.

FORMING WITH MOVEMENT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package giving 3d graders and older students an opportunity to become familiar with some elements of art form of dance

This package, part of the Aesthetics and the Creative Process group of the *Five Sense Store*, provides the opportunity for students to become familiar with some elements of the art form of dance. A workbook and three project booklets are used to help students understand the concept of forming in its broad sense and in the particular sense of forming with movement. When they have completed these activities, the students should understand the meaning of sequence and be able to perform movement sequences having repetition, contrast, and both repetition and contrast. They should be aware that, like artists, they can have many reasons for forming with movement. They will also understand the concepts of level, direction, and dimension and be able to incorporate these into their movements. When they have completed these activities, they should have a better grasp of the intentions, criteria, and decisionmaking requisite to the creative process and, in this case, to the process of forming with movement.

Sample Lesson

(Addressed to Teachers)

Lesson 2

General Description: The students work with you to establish a safe and constructive management system for the creative movement activities which follow.

Procedure: During this session, point out to the students these three major ideas:

1. "You have control over your body and its movement; so you can do many different and unique movements and you can stop them." Also along this line, "Your body has limitations and you should use good common sense about how far you push it."
2. "Two bodies cannot be in the same space at the same time. Thinking ahead, being careful, and being willing to cooperate will be needed so that we can all work safely and successfully together."
3. "Creative movement activities can be a great deal of fun and very exciting, but they are not the same as playing. They are serious and can be hard work. Many interesting things can happen if the work is done well."

Have the students do the suggested movement activities so that they get used to moving creatively and safely while you maintain the necessary control of the classroom.

Consider establishing some "signals" or "rules" between you and the students as you do starting, stopping, listening, looking, and resting. The cues may be things you already use in the classroom, such as certain words, lights, and clapping hands, and certain noises. This will help to organize and add more fun to the work.

Here are some movement ideas for the students to work with. Give them time to explore and practice the steps of problem solving through movement.

1. "Find how many ways you can move your head, arms, legs, back, whole body."
2. "Find how many shapes you can make with your body. Then move in slow motion from one shape to the other."
3. "Find how many different ways you can move from one place in the room to another place in the room."
4. "Find how many ways you can support your body and still keep moving. Besides on your feet, how else can you move?"

Tell the students to close their eyes (except when moving through space) as they explore. This will help shut out distractions, open the imagination, and encourage concentration on the kinesthetic experience.

Give the students an opportunity to see others' ideas but take care not to make them "perform" prematurely. A nice compromise is this: At the end of each exploration, have half the group sit down and the other half help share what they found. This prevents singling out any one individual and developing self-consciousness. Large groups provide a comfortable anonymity.

Be sure to make the point of no right or wrong way of moving but, rather, a "solution." As the students watch others, tell them to notice that a variety of solutions can be equally good if the movement is clear and controlled.

SUBJECT AREA(S)

Aesthetics and the Creative Process: Dance.

Forming, or the creative process, involves having intentions, establishing criteria, and making aesthetic decisions. All of these elements can be identified in the process of forming with movement.

INTENDED USERS AND BENEFICIARIES

Forming With Movement was designed for use with 3d-grade children but can be used with older children as well.

GOAL(S) OR PURPOSE(S)

The purpose of this package is (1) to help students organize their own method, or structure, for completing a whole work of their own design—in this case, forming with movement; (2) to help students describe and analyze aesthetic decisions in relationship to forming with movement; and (3) to help students learn to make critical judgments about the movement patterns made by individual students and groups of students, these judgments to be based on the student's own aesthetic criteria.

PATTERNS OF USE

Forming With Movement is a self-contained set of materials with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in dance; linked with other Aesthetic Education Program (AEP) packages related to dance; used with other AEP packages in the Aesthetics and the Creative Process group; and used in the refinement of motor skills and sense perception skills.

ASSESSMENT PROVISIONS

Throughout the unit, student learning is assessed by both the teacher and the students themselves. In the student books, a checklist at the end of each creative task encourages students to evaluate their own work as they proceed through the activities. For the teacher, a series of observation schedules is included as a guide to judging student success with the movement activities. Additional guidelines for assessing other aspects of student performance are found throughout the teacher's guide.

TIME REQUIREMENTS

Forming With Movement takes a minimum of 8 hours to complete and will take longer if the teacher makes use of the additional discussions or repeats some of the activities. The nine activities work best when they are broken into 30- and 40-minute sessions.

IMPLEMENTATION PROCEDURES

Forming With Movement does not require a specialist teacher. The package is designed to be used with large or small groups for students from 2d-semester 3d-grade to 5th-grade levels. Students who have an above-average reading ability may work through much of the materials on their own after the first two introductory activities. The *Forming With Movement* workbook is designed to be totally teacher-directed, however, and the culminating activities are to be done as a whole group.

The activities require a good deal of open space for free movement, and when possible the teacher is encouraged to take the students outdoors to work on the materials.

Summary Cost Information

Depending on classroom organization, units can be purchased in varying multiples of 6, e.g., 12-student, 18-student, 24-student sets with teacher materials, etc. Student materials and teacher materials can be purchased separately.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trials indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States. They use carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives demonstrated by verification of measurable differences in the behavior of the students who have studied the materials.

After the pilot trial of the materials, the program continues to gain information about the utilization of the published version of the package on a yearly basis.

The pilot evaluation of *Forming With Movement* was carried out in 3d-grade classes in four local schools with widely varying ethnic and socioeconomic characteristics. None of the four teachers had special training or knowledge of dance or movement education. The results of these evaluations, which included intensive observation, teacher and student questionnaires and interviews, and performance measures specifically constructed to assess the major hypothesized outcomes of the unit, support the following claims. Students who received package instruction were able to demonstrate kinesthetically an understanding of the majority of the major movement concepts underlying the package and could apply these terms critically according to the criteria for forming established by the package. Students evidenced a high degree of involvement and satisfaction with the materials, measured by both self and teacher reports. Although the activities are necessarily somewhat noisy and require moving desks to achieve the needed classroom space, teacher response to the package was very positive. These materials were observed by teachers to increase constructive group interaction and communication among their students and were judged particularly effective in helping to integrate the shyer students into the group.

MATERIALS AND EQUIPMENT

AESTHETIC EDUCATION

RD 010 032

MAKING SOUNDS INTO PATTERNS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package designed to provide primary students with some basic skills to make them more sensitive listeners to music

One of the Aesthetics and the Creative Process series of the *Five Sense Store* packages, *Making Sounds Into Patterns* is designed to provide primary students with some basic skills which will help make them more sensitive listeners to music. The students take part in listening and performing activities intended to initiate appreciation of whole musical works through conscious awareness of musical components.

This package stresses an understanding of the part played by patterns of sound duration and pitch in the total musical work. Students listen to short, medium, and long sound durations and manipulate symbols representing these periods of sound. Using the visual symbols, the students create patterns by combining various sound durations in a series. Then they perform their own patterns or those of their classmates with a musical instrument or their own voices. The package's next step adds pitch to the duration patterns. This approach readies students to understand that whole musical works are constructed of patterns which supply form, variety, and unity to a musical work.

Certain basic musical skills are necessary for providing access to higher musical understanding. Such skills are essential because the highly abstract nature of music requires students to reach an aural starting point from which to move along a path toward musical understanding.

The approach of this package to the understanding of communication is based on the students' current level of relating to sound, that is, their relationship to the three levels of aural perception—hearing, listening, and assessment. Most primary students have attained the hearing level. This level has no special aesthetic significance and may be equated with a visual equivalent of looking but not seeing. On the other hand, the third level, assessment, implies analysis and performance training. To the young student, this level is of no major consequence. It is the remaining level—listening– which can provide for the primary student a major inroad into the art of music.

Sample Lesson

(Addressed to Teachers)

"Creating Patterns of Sound Duration and Pitch"

General Description: Students will create their own patterns of sound duration and pitch, and the class will perform their compositions.

Procedure: You have now arrived at the most vital experience of this package. Students can become creators of original patterns. It is hoped that they will insist on new durations for more variation and develop original symbols for implementing these durations.

Distribute student color-coded pattern sheets and pencils. You may begin this experience by saying to the students, "Can you write out a pattern? What kind of marks can you make to show l—o—n—g, m-i-d-d-l-e, and short durations in your pattern?"

At first, encourage them to think in terms of making symbols with their pencils that look like the desk-top symbols they used earlier. Tell the students, "When you have finished your own patterns, we will choose one to place on the large pattern board. Then you and the whole class will play it."

When most of the students have had time to create original patterns, choose one and copy it onto the large pattern board with large duration symbols. "OK class—let's play Andy's pattern." Or, "Andy will play his pattern." After the pattern has been played, collect all the materials.

SUBJECT AREA(S)

Aesthetics and the Creative Process: Music.
Exploration of patterns of sound duration; exploration of patterns of pitch duration; relationship of patterns of sound and pitch duration to total musical work; creation of student patterns of sound and pitch durations.

AESTHETIC EDUCATION

RD 010 032

INTENDED USERS AND BENEFICIARIES

Making Sounds Into Patterns has been designed for and formally tested with students in the 1st grade.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is for students to understand the part played by patterns of sound duration and pitch in a total musical work.

PATTERNS OF USE

Making Sounds Into Patterns is a self-contained instructional package with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in music or linked with other Aesthetic Education Program (AEP) packages which are related to art, dance, drama, and literature and which are clustered around Aesthetics and the Creative Process.

ASSESSMENT PROVISIONS

While there are no formal tests, teacher and students assess learning by judging student products and oral responses. Guidelines for assessing the responses are written in the teacher's guide.

TIME REQUIREMENTS

Making Sounds Into Patterns requires approximately 5 hours to complete.

IMPLEMENTATION PROCEDURES

Making Sounds Into Patterns will not require a specialist teacher. The lessons in the package call for large- or small-group instruction in addition to individual student work. Students may have to sit on the floor in order to be close enough to the pattern board to see it clearly. The teacher is encouraged to relate the concepts in the product to harmony in music.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training in music will be able to implement this instructional package. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, and inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators review the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package.

After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests. First, they must be in keeping with the overall goals of the program. Second, there must be evidence that the materials can stand alone in the hands of a competent teacher. Third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on the utilization of the published version of the package on a yearly basis.

Two stages of developmental evaluation of this package have been carried out in four 1st-grade classrooms in the St. Louis area. Interviews with the students indicate that the great majority of them enjoyed working on the package and almost all of them had learned the key concepts in the package.

Other results of the interviews conducted with students and teachers have indicated that certain modifications should be made in these materials with regard to the student equipment supplied and clarification of goals. These revisions will be carried out before the materials are published.

This package is primarily experimental in nature. For this reason further claims based on technical data cannot be made at this time. There are tentative indications that experience with the materials may lead to increased musical memory and may serve as an advance organizer for future experience in learning musical notation. The same care used in developing this product is evidenced in CEMREL's decision to revise it further after the two stages of evaluation already completed.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student Materials:

PERCEIVING SOUND WORD PATTERNS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package which introduces 2d-grade students to word patterns as devices used in literature

This package, part of the Aesthetics and the Creative Process group of the *Five Sense Store* packages, introduces students to word patterns as devices used in literature to communicate meaning and feeling. Through the package, students develop an understanding of the properties of three of these literary devices (alliteration, refrain, and rhyme). They show their grasp of these devices by using onomatopoeia to create word patterns and five-word poems which make use of alliteration, refrain, and rhyme. The three poetic devices which are the focus of the package—alliteration, refrain, rhyme—depend upon repetition for their effect. By perceiving and using these poetic devices, the students understand that they can organize and structure words by repeating them in certain combinations and arrangements.

The package introduces the students to onomatopoeia as an element of literary language. (Throughout the package, the term "sound words" has been substituted for "onomatopoeia.") The package provides students with an opportunity to become aware that literature makes a greater use of the sensuous qualities of language than does nonliterary language. Unlike the person who uses language primarily to impart information, the writer of literature chooses words for sound and meaning, using sound as a way of reinforcing meaning. By introducing sound words as a phenomenon in literature and by dealing with word choice, the package provides students with some ways of using sound to point to meaning.

Sample Lesson

(Addressed to Teachers)

Lesson 5

Concept: A sound word is a word with sensuous qualities—a word that sounds like what you hear. Sound words are used to enhance meaning.

General Description: The students will work from the sound word to a visual image fitting that word. They will suggest and draw pictures to illustrate sound words both individually and as a large group. They will create a sound poem and record it.

Procedure: Ask the students to think of drawings to go with "beep beep," "bonk bonk," and "bam bam." Ask them what mental image is suggested by each of the sound words. Then you become the class artist and draw pictures from the students' suggestions. Get two or three ideas from the students for each of the sound words. Give the students the following directions for individual work: Tell them to keep their sound words secret until the sharing period. Ten to fifteen minutes should be sufficient time for the drawing. On your paper, draw a picture to go with one of these sound words: Splash, ahhh, zip, grrr, eeek, pow, tap. Write the sound word on one side of your paper. Draw your sound word picture on the other side of your paper. To share, have students hold up their drawings and ask the class to guess which sound word is depicted. Then create a sound poem from the sound words. Orchestrate these sound words and record the resulting sound poem.

SUBJECT AREA(S)

Aesthetics and the Creative Process: Language arts/literature.

Alliteration is the repetition of initial or final consonant or vowel sounds. Used in conjunction with onomatopoeia, alliteration will produce a word pattern in which initial or final consonant or vowel sounds dominate. Refrain is the repetition of sound word patterns at intervals within a poem or song. Rhyme means similar or identical sounds placed in corresponding positions within a word pattern. A simple poem form containing five one-word lines, at least the middle three of which are sound words, can be used to review alliteration, rhyme patterns, and refrain.

INTENDED USERS AND BENEFICIARIES

Perceiving Sound Word Patterns has been designed for use by 2d-grade students, but may be used with older children as well.

GOAL(S) OR PURPOSE(S)

The goals of this package are: (1) To make students aware that sound is used in literary language to communicate meaning and emotion; (2) to bring students to an awareness that onomatopoeia has qualities which stimulate the senses and make us see and hear more keenly; (3) to help students recognize sound words, design visual representations of sound words, and use them in their own oral and written communications; (4) to make students more aware that sound is used in literary language to communicate meaning and emotion and that patterns of sound in literature are created through choosing and arranging words into a variety of word patterns; and (5) to help students recognize alliteration, refrain, and rhyme in literary works appropriate to their age.

PATTERNS OF USE

Perceiving Sound Word Patterns is a self-contained set of materials with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in literature, language arts, or creative writing; linked with other AEP packages which are related to literature and writing; or used with other packages in the Aesthetics and the Creative Process group.

ASSESSMENT PROVISIONS

One of the learning games (Sound Word Bingo), which is an activity in the package, is suggested for use as a pretest. In addition, the teacher's guide contains guidelines for assessing the oral and written products of students.

TIME REQUIREMENTS

Perceiving Sound Word Patterns requires approximately 5 to 8 hours to complete, excluding optional activities and followup experiences. The time also may be longer if the teacher wishes to spend more time on sharing the results of the creative thinking and creative writing periods. There are 10 separate activities, each requiring about 30 to 45 minutes.

IMPLEMENTATION PROCEDURES

Perceiving Sound Word Patterns does not require a specialist teacher. This package has been tested with students in 2d grade, but may be used with older children at the discretion of the teacher or curriculum specialist.

Most of the activities would do well as introductions for various artistic experiences, particularly creative writing. Thus, it may be wise to present the activities in conjunction with regularly scheduled artistic periods or creative writing periods.

The activities require the students to work in a large group led by the teacher, in pairs or in small groups, and individually. Some activities will require rearranging the classroom.

Summary Cost Information

Depending on classroom organization, units can be purchased in varying multiples of 6, such as, 12-student, 18-student, or 24-student sets with teacher materials. Student materials and teacher materials can be purchased separately.

Personnel Required for Product Adoption and Implementation

A classroom teacher without special training can implement this unit of instruction. Workshops are offered by the publisher, and curriculum consultation is available from CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated in its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any forms of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from the classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second, pilot-stage evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot-trial evaluation of the materials, the program continues to gain information about the utilization of the published version of the package on a yearly basis.

A prepublication version of the package was tested in 2d-grade classrooms in local schools. Student satisfaction with the package was high; and students reported learning from it. Based one teacher and evaluator comments, the package is being revised prior to publication.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student materials:				
6 *Creating Word Patterns, Zip, Zap, Zoom* (books) 1 *Investigating the Elements: Sound Words, Abracadabra* (book) 6 game boards 1 pad of sound word story sheets 1 pad of alliteration sheets 1 pad of word pattern exercise sheets 1 pad of sound word sheets 1 pad of rhyme sheets 1 pad of refrain exercise sheets	1 set per 6 students	*	Evaluation sheets consumable yearly

RELATING SOUND AND MOVEMENT (PART OF THE AESTHETIC EDUCATION PROGRAM)

A package intended for 2d graders which explores the relationships that exist between sounds and body movements

This package, part of the Aesthetics and the Creative Process group of the *Five Sense Store* materials, explores the relationships that exist between sounds and body movements. Looking, listening, moving, making sounds—these are ways the primary students experience and learn to differentiate high-low, fast-slow, loud-soft, and strong-weak sounds and movements. Materials to stimulate the exploration—a film, a series of recorded sounds, the continuum book—encourage the students to notice the sounds and movements that they see and make daily. Then students work with materials that focus and refine their perceptions (soundmakers, flashlight belts, charts, observation sheets). The concluding lesson presents an expressive, filmed example of the fusing of sound and movement, shown not as something for students to copy, but as a summation of awareness arrived at through the package.

This package will encourage students: (1) To explore sound elements by listening to and producing sounds of varying timbres within continuums of high-low (pitch), loud-soft (intensity), and fast-slow (tempo); (2) to explore movement potential within three quantitative dynamics by responding to examples of movement in a film and in the continuum book (working with their body movements and shadows, they will develop and show at least one example of each of these movements); (3) to explore relationships of sound and movement by matching and contrasting sounds and movements they make; and (4) to integrate the concepts presented in the previous lessons by developing a sound-movement statement that incorporates matching similar sounds and movements and contrasting opposite sounds and movements. They will evaluate their own work and that of their fellow students along with the teacher.

Sample Lesson

(Addressed to Teachers)

Concept: One way in which sound and movement can be related is to contrast the dynamics of the corresponding elements of the two media.

Objectives: The students will explore a relationship of sound and movement by contrasting sounds and movement. They will make sounds and contrast movements to the sounds and vice versa.

Procedure: Using the Sound and Movement chart, introduce the concept of contrasting. Pair the students. Assign the high-low continuum to begin the contrast exploration. Remind the students of their matching of sounds and movements in lesson 4, and point out that contrasting is another way that sounds and movements can be related. Using the chart, help them understand that to contrast in this context means to convey a sound quality that is opposite to a movement quality.

Decide which of the pair is the mover and which is the soundmaker. Soundmaker makes a high sound. Mover responds with a low movement. Then soundmaker makes a low sound, and mover responds with a high movement. Switch order: Mover moves and soundmaker responds. Switch roles: Mover becomes soundmaker and vice versa. Any verbalization of what the mover means to show by the movement or what quality the soundmaker means the sound to convey should be discouraged at this point. Rather, encourage them to tune in to their partners by watching and listening. Some pairs of students tend to repeat the same kinds of sounds and movements. A switch in partners at any time in the exploration could stimulate new thinking about how to move and make sounds.

Invite students to evaluate their explorations with resonses to such questions as: "Which contrast was most difficult for you? Why do you think so?"

Work first with the fast-slow continuum and then with the loud-soft/strong-weak continuum. Have student pairs show their contrasts to one another. The performance of successful work can stimulate other students who have difficulty finding or contrasting the sounds or movements.

RD 010 034

SUBJECT AREA(S)

Aesthetics and the Creative Process: Dance-music.

Exploring and experiencing continuums within pitch, tempo, and amount of intensity in sound; exploring and experiencing continuums within amount of space, amount of time, and amount of force in movement; exploration of the sound-movement relationship by matching and contrasting; the process of developing a sound-movement statement that incorporates matching similar sounds and movements and contrasting opposite sounds and movements.

INTENDED USERS AND BENEFICIARIES

Relating Sound and Movement is designed primarily for 2d-grade students. It can be used at the discretion of the teacher, however, with 1st- or 3d-grade students.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package is to increase a student's capacity to experience a dance-music event by refining the student's ability to differentiate among high-low, fast-slow, loud-soft/strong-weak sounds and movements and to perceive several possible relationships between sound and movement.

PATTERNS OF USE

Relating Sound and Movement is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used as part of an ongoing curriculum in dance or music; linked with other music- or dance-based packages developed by the aesthetic education program to form a curriculum; or linked with other AEP packages which are related to art, literature, theater, and film and which are clustered around aesthetics and the creative process.

ASSESSMENT PROVISIONS

Two pretests, one asking students to discriminate among sounds and another dealing with the ability to discriminate movement, serve as the first two activities. These can also be used as posttests. Teachers and students assess learning based on student activities and oral responses. Guidelines for the assessment are in the teacher's guide.

TIME REQUIREMENTS

The activities in this product require 8 to 10 hours to complete, depending upon the way in which the teacher chooses to structure them.

IMPLEMENTATION PROCEDURES

Relating Sound and Movement does not require a specialist dance or music teacher. It is recommended that it be taught in a number of small groups working independently, rather than in one large group. It would also be possible to allow individual students to work independently on certain activities. Thoughtful exploration and self-evaluation by the students are encouraged throughout this package.

Field reports indicate that the materials stand up well with repeated use. Consumables are minimal and are easily purchased from the publisher.

Summary Cost Information

Packages can be purchased in varying multiples of 6; e.g., 12-student, 18-student, or 24-student sets. Student and teacher materials can be purchased separately, so that only one set of teacher materials need be purchased with two, three, four, or five student sets. Cost for one complete unit containing enough materials for one teacher and six students in $145. Price is subject to change.

Personnel Required for Product Adoption and Implementation

The classroom teacher without special training in music or dance can implement this instructional package. Workshops are offered by the publisher and by CEMREL, Inc. Curriculum consultation is also available from CEMREL, Inc. Cost for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated during its trial use in four separate classrooms of widely varying ethnic and socioeconomic characteristics. The developers have not received any reports of harm associated with the use of this product.

Materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such shortcomings in the materials is resolved by an appropriately directed review of the materials by a qualified expert outside the program. The materials are revised to eliminate any deficiencies identified in the review.

Information gathered from classroom trial indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented with no aid beyond that given in the teacher's guide.

Claims

The major claim to be made about the Aesthetic Education Program's instructional materials is that they represent the only comprehensive curriculum resource based on the arts that has been developed in the United States using the carefully defined and implemented development and evaluation procedures basic to the concept of an educational development laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carried out an observational monitoring of trial implementation of the package in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package.

After revision, a second, pilot-stage, evaluation is carried out in three classrooms. In this stage, the materials must pass three major tests. First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher; and third, the materials must meet certain short-term payoff objectives, demonstrated by verification of measurable differences in the behavior of the students who have studied the materials. After the pilot trial of the materials, the program continues to gain information on a yearly basis.

A prepublication version of the package was tested with two 3d-grade classes in one racially and economically mixed local school. A questionnaire administered before and after the use of the package indicated that students were improved in their ability to recognize and name the characteristics of movement.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student Materials:				
6 flashlights with belts	1 set per 6 students (at one time)	29.00*	Pre-test and evaluation sheets consumable yearly or after five uses	
2 pads of sound pre-test sheets (30 sheets in each pad)				
2 pads of observation sheets for evaluation (30 sheets in each pad)				
Teacher Materials:				
Teacher Guide		116.00*		
16mm pre-test sound color film				
12" LP disc record				
Double-faced wall chart				
Book of photos

SWRL ELEMENTARY ART PROGRAM

A program for grades K-6 which provides resources for sequenced, systematic art instruction

The *SWRL Elementary Art Program* provides research-based, classroom-verified resources for sequenced, systematic art instruction. The performance-based program is generally used in grades K-6.

Program materials and procedures enable teachers with little or no background in art to provide pupils with a solid foundation for skill attainment in the visual arts and to encourage independent inquiry. Teachers with specialized art training will also find that the program enhances the instructional options available to them.

The program promotes art performance and appreciation skills through the development of artistic proficiency consistent with pupil maturity and experience. Pupils learn to produce works of art using a variety of media, to make informed judgments regarding the visual properties of art works, and to identify art works in their appropriate cultural/historical contexts.

Instructional resources are flexibly formatted to provide classroom-verified options for illustration of art concepts and development of production skills. Three types of filmstrips are provided:

1. Production filmstrips demonstrate the step-by-step procedures for each unit activity.
2. Visual analysis filmstrips illustrate visual features and relationships characteristic of selected art works.
3. Critical analysis filmstrips help establish the cultural and historical context of contemporary and traditional art.

Teacher materials provide suggestions for introducing specific art concepts and skills, for conducting activities that promote a practical understanding of each concept, and for effective utilization of other program resources during instruction.

SUBJECT AREA(S)

The program promotes specific art production skills and an understanding of basic art concepts.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in grades K-6.

Program resources provide comprehensive materials and procedures for teachers with little or no background in art and enhance the instructional options of teachers with extensive art training.

GOAL(S) OR PURPOSE(S)

Instruction is designed to promote art outcomes identified by the National Assessment for Educational Progress. Activities develop increasingly sophisticated skill attainment as pupils progress through the program. Opportunities for individual expression and decisionmaking have been systematically built into program lessons.

Pupils participating in the program develop skills related to art production, appreciation, and history.

Production—Children develop proficiencies for producing works of art in a variety of media.

Appreciation—Children learn to make informed judgments based on a developing sensitivity to both natural and manmade beauty.

History—Children learn to place art works in their appropriate cultural/historical contexts.

PATTERNS OF USE

The program is organized into ungraded instructional blocks. Each block is divided into units that promote art skills and an understanding of art concepts through carefully sequenced activities.

In a four-activity unit, the initial activity introduces new techniques and concepts. The second activity provides for imitation and application, and the third involves variation and further development of techniques and concepts. Activity four provides for cumulative expression of skills learned, incorporating previously introduced techniques and concepts.

While the materials and procedures represent a comprehensive program of art instruction for grades K-6, program resources enable the teacher to supplement planned art activities in accordance with pupil interest and learning.

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on sound information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific art program skills. Suggestions are provided for assisting those pupils who might benefit from supplementary instruction on program skills.

The art program quality assurance system includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The system also provides a means by which the pupil proficiency attained with the art program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

The *SWRL Elementary Art Program* is organized into 14 blocks of instruction. Scheduling of individual lesson activities depends upon teacher judgment of pupils' learning needs and interests, and the amount of instructional time available. If two lessons are conducted weekly, pupils generally complete two instructional blocks during the school year.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the art program efficiently and effectively. For example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the programs effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the installation system are materials for performing administrative functions related to the *SWRL Elementary Art Program*. For example, there are suggestions for: Conducting briefing sessions for school boards, parents, and community members; ordering and distributing materials; conducting followup training sessions for teachers; monitoring the operation of the program during the school year; and integrating the program with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 7 tryouts involving in the aggregate more than 850 classrooms and 26,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Activities and materials guide	1 per teacher at appropriate block	Not determined	Reusable	
Filmstrip set including production, critical analysis, and visual analysis filmstrips	Filmstrip sets (may be shared; 1 set per 2 or 3 classes at appropriate block)		Reusable	
Art supplies typically available in schools (newsprint, construction paper, manila paper, tissue paper, tempera, flat bristle brushes, water color brushes, crayons, chalk, clay, yarn, liquid starch, sponges, scissors, paste)				Local Education Agency

SWRL MUSIC PROGRAM

A program for grades K-6 which provides resources for conducting sequential music instruction

The *SWRL Music Program* provides research-based, classroom-verified resources for conducting sequential music instruction. The performance-based program is generally used in kindergarten through grade 6. Program materials provide comprehensive resources for the teacher with no background or training in music and enhance the resources available to the music specialist.

The program makes the expressive possibilities of music available to all children through the development of music proficiency consistent with their maturity and experience. Pupils learn to employ basic music concepts in activities involving music performance, composition, and appreciation.

Instructional resources combine flexible format and multimedia design. They provide classroom-verified options for presentation of music selections and illustration of music concepts. Materials, including recorded songs and song elements, piano-vocal arrangements, illustrated posters and cards, and suggestions for the use of classroom instruments, insure a rich variety of learning experiences.

Teacher materials provide suggestions for introducing specific music concepts, for conducting activities that promote a practical understanding of each concept, and for effectively utilizing other program resources during instructions.

SUBJECT AREA(S)

This program promotes specific music skills and an understanding of basic music concepts.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in kindergarten through grade 6.

Program resources were designed for teachers with varying musical backgrounds. These resources provide comprehensive materials and procedures for teachers with little or no background in music and enhance the instructional options of teachers with extensive musical training.

GOAL(S) OR PURPOSE(S)

Pupils participating in the program develop skills related to music performance, composition, and appreciation. Concepts taught in the program may be classified in the following categories: Rhythm, melody, harmony, form, time color, and dynamic level. Instructional activities are designed to promote an increasingly complex understanding of these concepts as pupils progress through the program.

PATTERNS OF USE

The program is organized into ungraded instructional blocks. Each block is divided into units that promote music skills and an understanding of basic music concepts through carefully sequenced activities. The block structure of the program facilitates pupil placement, instructional planning, and grouping based on pupil attainment of specific program skills.

While the materials and procedures represent a comprehensive program of music instruction for kindergarten through grade 6, program resources enable the teacher to supplement planned music activities in accordance with pupil interest and learning.

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on accurate information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific *SWRL Music Program* skills. Suggestions are provided for assisting those pupils who might benefit from supplementary instruction in program skills.

The music program quality assurance system includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The system also provides a means by which the pupil proficiency attained with the *SWRL Music Program* can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

The *SWRL Music Program* is organized into 14 blocks of instruction. Scheduling of individual lesson activities depends upon teacher judgment of pupil learning needs and interests, and the amount of instructional time available. If three lessons are conducted weekly, pupils generally complete two instructional blocks during the school year.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the *SWRL Music Program* efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the programs effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the installation system are materials for performing administrative functions related to the *SWRL Music Program*. For example, suggestions are made for: (1) Conducting briefing sessions for school boards, parents, and community members; (2) ordering and distributing materials; (3) conducting followup training sessions for teachers; (4) monitoring the operation of the program during the school year; and (5) integrating the program with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher, with no requirement for specialized personnel. During each of the 6 tryouts involving in the aggregate more than 900 classrooms and 28,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schemes. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance as related to sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of assuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance (QA) has been developed. The QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and are available for sharing with parents. This information has proved especially useful in furthering parent/school communication and in fostering parental support.

ARTS/PARTS: PERCEIVING AND ANALYZING THE ARTS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A teacher education package which deals with the arts as examples of aesthetic education

The Teacher Education series of the Aesthetic Education Program (AEP) includes this instructional package, which uses the arts as examples for aesthetic education. In order to understand and use the arts creatively and as an effective teaching tool, the nonarts specialist must become familiar with the elements in arts forms and how they relate to the aesthetic qualities of our world. Through the use of a large multimedia book entitled *Arts/Parts*, the teacher participant explores some of the elements in each of five arts: Drama, music, visual arts, dance, and literature. The elements are introduced to the participant in each of five major activities. Then the participant actively explores the elements through additional activities using the already-learned arts vocabulary. The book is a self-contained unit consisting of such things as a foldout performing space board with movable figures, a music board, excerpts from drama and literature, recorded selections, a visual arts puzzle, various types of activity cards, photographs, and critical reviews. A manual within the book provides the participant with objectives, directions, and followup activities. Reference readings by arts experts discussing the elements of each art form are provided, as are an extensive bibliography and concept statements from related AEP children's materials, to aid the participant in curriculum development. Final activities encourage further arts exploration and ways of relating the learned knowledge to the elementary classroom.

This package encourages participants (1) to explore some musical elements of rhythm, melody, harmony, meter, and tone color through a sound board with overlays and accompanying tape recording, and to relate the knowledge learned to other musical compositions; (2) to explore such elements as line, color, shape, texture, and value through overlays of Picasso's *Guernica*, and to relate this vocabulary to other works of art as well as create their own composition with an elements puzzle; (3) to explore such elements as motion, space, and setting in drama and dance through a performing space board with movable figures and setting cubes; (4) to explore some elements of plot, conflict, intention, subtext, character, and setting in drama through analyzing and acting out a written script; (5) to explore these elements again by analyzing a scene from *Hamlet* with provided audiotape to see how the written word and the spoken word combine in drama; and (6) to look at such elements as imagery, metaphor, figurative language, theme, setting, character, and conflict in literature by analyzing a short story and a poem and then creating their own works by using word picture cards. Final activities encourage the participants to go out and seek additional arts resources, to become active participants in arts events, and to use the knowledge gained in *Arts/Parts* in the elementary classroom.

Sample Lesson

Visual Arts Elements

This lesson familiarizes the participants with some visual arts elements of line, shape, color, texture, and value. The first activity involves Picasso's *Guernica*, which has been taken apart on a series of acetate overlays, each overlay showing one of the above elements. The participants can see how Picasso used each of these elements by first individually examining the overlays. When the overlays are all placed on top of each other, the participants can see how the work comes together to form an aesthetic whole. The same procedure is then done by the participants using Rousseau's *The Dream*, blank overlays, and a grease pencil provided for drawing and shading. In the third activity, an elements puzzle made up of abstract black-and-white pieces is provided. The participants select a theme and create their own visual arts work. They are asked to articulate why they used various elements in a specific way to best illustrate the chosen theme.

Finally, a series of photographs which represents a variety of visual arts forms in different periods and styles (such as, painting, sculpture, architecture) is presented. The participants are asked to discuss these pictures and to make comparisons and contrasts by using the learned vocabulary. The participants are also given a reference reading by Reid Hastie from *Encounter With Art*, which further details the elements in the visual arts. Additional information on the visual arts used as examples in the photographs is provided in a resource section in the manual, as is a detailed analysis of *Guernica*.

SUBJECT AREA(S)

Teacher Education: Aesthetic education, elementary education, music, visual arts, drama, dance, and literature.

Introduction to elements in various arts forms: How these elements combine in a unique way to create a specific aesthetic intent; the relationship of the arts to aesthetic education; the development of a vocabulary which can be applied both to the arts and to the aesthetic qualities of the everyday world; the development of a critical, responsive audience to arts objects and events; curriculum development in aesthetic education.

INTENDED USERS AND BENEFICIARIES

These materials are designed for preservice and inservice teachers at the elementary level, although they would also be beneficial for secondary school teachers. They may be administered in a college course curriculum or in a teacher workshop situation. Although the arts are used as examples for teaching aesthetic education in these materials and the materials can be taught by arts specialists and aesthetic education specialists, the information and activities can also be easily used by nonarts specialists and can give the participant varied experiences in several arts forms (literature, drama, visual arts, and music).

GOAL(S) OR PURPOSE(S)

The purposes of this instructional unit are to teach participants: (1) To identify elements that are in art forms; (2) to use a shared critical language in discussing the elements and in analyzing the formal, part/whole relationships within works of art; (3) to use the elements as ways of describing and analyzing the aesthetic qualities in the environment and understand the similarities and differences between natural objects and experiences and those created with specific aesthetic intent; and (4) to directly apply the vocabulary methods, techniques, and activities to the elementary classroom.

PATTERNS OF USE

Arts/Parts: Perceiving and Analyzing the Arts is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used to provide instruction in the areas of aesthetics, aesthetic education, elementary education, arts in general education, and an integrated arts course. It may be administered by a teacher trainer or worked on independently by a teacher group with the aid of the provided manual. These materials are applicable in a variety of educational settings, including traditional university courses and short-term workshops.

ASSESSMENT PROVISIONS

Learning is assessed by the teacher trainer and the participants. Although the participants are encouraged to use their own perceptions first when analyzing works of art and developing a vocabulary, additional information from experts in the field is provided through reviews, critical analysis, reference readings, and information on photographs used in the visual arts and performing arts section. The participants use these sources to compare and evaluate their own perceptions, as well as to justify and to compare their own perceptions in discussions with the teacher trainer, their peer group, and arts specialists whom they contact. Participants will also be able to assess how their ability to analyze a professional arts event has been heightened through the use of vocabulary presented in the unit when involved in the final activity telling them to attend an arts event.

TIME REQUIREMENTS

Arts/Parts: Perceiving and Analyzing the Arts takes approximately 10 hours, with individual sessions taking not less than 45 minutes to complete—depending upon the class size, the educational setting, the time the teacher group is together, whether it is taught alone or is part of a larger curriculum plan, and how much utilization of outside activities occurs.

IMPLEMENTATION PROCEDURES

Arts/Parts: Perceiving and Analyzing the Arts does not require a specialist teacher. Participants may have their own books, or two or three participants might share a book. Individual work and small-group discussion are encouraged to enhance interaction. Some of the activities can be done on an individual basis; others have varying degrees of involvement with other members of the teacher education group. Space is required because some activities involve movement, and room is needed to spread out some of the materials. The manual outlines all procedures. An individual can go through this entire set of materials without the aid of a teacher trainer by following the manual procedures.

The teacher trainer or the teacher education group is encouraged to relate these activities to professional arts events, to bring in arts specialists to answer any questions and provide further information, and to use the bibliography as a source for further ideas and reinforcement. Participants are also encouraged to use the concepts provided from AEP children's packages for actual curriculum development and to try out these ideas with elementary school children.

RD 010 037

Personnel Required for Product Adoption and Implementation

A teacher trainer without special training in aesthetic education can implement this unit of instruction. Curriculum consultation is available from CEMREL, Inc. Costs for such services can be obtained from this organization.

ASSURANCES AND CLAIMS

The instructional unit, *Arts/Parts: Perceiving and Analyzing the Arts*, is presently in development. When completed, it will be tested as defined in the *Basic Program Plan* (CEMREL, 1972) and *A General Plan for Evaluating the Aesthetic Education Program's Teacher Education Packages* (Manis, 1974). At that time, appropriate assurances and claims will be made.

THE CREATIVE PROCESS (PART OF THE AESTHETIC EDUCATION PROGRAM)

Materials for elementary teachers emphasizing the expressive qualities of an object or experience

The Teacher Education series of the Aesthetic Education Program (AEP) includes this instructional package, which deals with the creative process. This package is currently under development.

The materials will emphasize the expressive qualities of an object or experience—how individuals make unique statements by making choices and structuring parts in a certain way for a specific aesthetic intent.

Activities will be provided to enable participants to actively explore creativity through creating their own works, becoming competent in organizing aesthetic elements into a whole work, and in articulating their reasons for such choices. Interviews and photographs of well-known artists in various fields will be provided, as well as discussions with noted educators and other individuals actively involved in increasing aesthetic awareness. Although the materials will use the arts as examples, ways of encouraging the creative process in every child and the necessity for schools to foster this process will also be emphasized. Throughout this set of materials, practical suggestions and instructions for implementing the creative process in the classroom will be provided. Concepts from related AEP children's packages, such as the Aesthetics and the Creative Process series and the Aesthetics and the Artist series, will be presented as well as relevant reference readings and a bibliography.

This package will encourage participants (1) to actively explore the creative process by creating their own works of art, (2) to expand their critical language necessary for analyzing and judging works of art, (3) to use the arts as a teaching tool for aesthetic education, (4) to nurture the creative process in every child, and (5) to regularly seek out and utilize additional resources in the arts and aesthetic education.

SUBJECT AREA(S)

Teacher Education: Aesthetic education, elementary education, visual arts, music, drama, dance, literature, and film are the subject areas.

This programed course focuses on how an individual organizes elements for a specific aesthetic intent; the development of a critical language for analyzing one's own work and the work of professional artists; an understanding of different materials, methodologies and structures of arts works; rationale for encouraging affective as well as cognitive learning skills through the nurturing of the creative process in every child.

INTENDED USERS AND BENEFICIARIES

These materials will be designed for preservice and inservice teachers at the elementary level, although they would also be beneficial for secondary school teachers. They may be administered in a college course curriculum or in a teacher workshop situation. Although the arts are used as examples for teaching aesthetic education in these materials and the materials can be taught by arts specialists and aesthetic education specialists, the information and activities can also be easily used by a nonarts specialist and can give the participant varied experiences in several arts forms (literature, drama, dance, visual arts, and music).

GOAL(S) OR PURPOSE(S)

The purposes of this instructional package are to teach participants: (1) To organize their own method or structure for completing a whole work of their own design; (2) to describe and analyze the aesthetic decisions used in completing the whole work; (3) to transform the elements into whole works in a number of arts disciplines, and to be able to discuss and contrast the elements, methods or structures of a variety of arts forms; (4) to analyze and critique works of art; (5) to perceive, analyze, and discuss how professional artists organize elements into a whole work; and (6) to understand the need for aesthetic education and the encouragement of creativity in the elementary schools.

PATTERNS OF USE

It is anticipated that *The Creative Process* will be a self-contained unit of instruction with activities that are sequential and cumulative. It will be developed for use as part of an ongoing college curriculum or in teacher workshops. It may be part of an integrated arts course, an aesthetic education course, or an arts-in-general education course and can be linked with AEP children's packages in the Aesthetics and the Creative Process and the Aesthetics and the Artist series.

ASSESSMENT PROVISIONS

Learning will be assessed by the teacher trainer and the participants. Specific procedures will be delineated during development.

TIME REQUIREMENTS

It is estimated that these materials will take approximately 10 hours to complete, depending on the class size, the educational setting, the time the teacher group is together, whether it is taught alone or is part of a larger curriculum plan, and how much utilization of outside activities occurs.

IMPLEMENTATION PROCEDURES

The Creative Process will not require a specialist teacher. Participants will probably work individually and in small groups to enhance interaction. A working space will probably be necessary. Specific procedures appropriate to the learning experiences will be delineated during the development cycle.

Personnel Required for Product Adoption and Implementation

A teacher trainer without special training in aesthetic education will be able to implement this unit of instruction. Curriculum consultation will be available from CEMREL, Inc. Costs for such services can be obtained from this organization.

ASSURANCES AND CLAIMS

The instructional unit, *The Creative Process*, is presently in development. When completed, it will be tested as defined in the *Basic Program Plan* (CEMREL, 1972) and *A General Plan for Evaluating the Aesthetic Education Program's Teacher Education Packages* (Manis, 1974). At that time, appropriate assurances and claims will be made.

HOW DOES A RAINBOW FEEL?/ AN INTRODUCTION TO AESTHETIC EDUCATION

An overview for elementary teachers of the value of aesthetic education in the school

The Teacher Education series of the Aesthetic Education Program includes this instructional package which is an overview of aesthetic education in the elementary school. The preservice and inservice teacher, for whom the materials are designed, will view "How Does A Rainbow Feel?," a film containing material and information relating to concepts in aesthetic education program's children's packages. The film will illustrate the variety of aesthetic qualities in our environment: Sounds, shapes, patterns, colors, textures. It presents works of art as illustrations of such qualities and then relates these perceptions to the elementary classroom. Children will be seen actively exploring and discovering such areas as body movement, shapes, point of view, characterization, and dramatic plot, using materials from AEP packages. The participants will view children joyfully perceiving and reacting to the aesthetic qualities in the world around them, as well as analyzing their works, making choices, and participating in creative decisionmaking processes.

A paper by Dr. Harry Broudy, which will discuss concepts in aesthetic education and teacher education, will also be presented in these materials. It will provide the participant with additional information on aesthetic education and a rationale for materials and concepts such as those developed by the aesthetic education program. Discussion questions will be provided on both the film and Broudy's paper. Activities and resources relating to concepts in the film and the paper will be provided.

These materials will encourage participants: (1) To see the need for aesthetic education in the schools; (2) to understand that aesthetic education is a balance between emotional perceptions and reactions, and intellectual analysis and articulation; (3) to become familiar with one method of approaching an aesthetic education curriculum; (4) to look at a school system with which they are familiar in terms of an aesthetic education curriculum; (5) to discuss the role the arts have played in their lives, both formally (going to a concert) and informally (buying a plant for decoration); and (6) to have an understanding of the value of making aesthetic considerations part of every person's decisionmaking process.

SUBJECT AREA(S)

Teacher Education: Aesthetics, aesthetic education, the arts, and curriculum development.

Introduction to concepts in aesthetic education: An approach to curriculum development in aesthetic education; the value of the arts in elementary education.

INTENDED USERS AND BENEFICIARIES

These materials will be designed for preservice and inservice teachers at the elementary level, although they would also be beneficial for secondary school teachers. They may be administered in a college course curriculum or in a teacher workshop situation. Although the arts are used as examples for teaching aesthetic education in these materials and the materials can be taught by arts specialists and aesthetic education specialists, the information and activities can also be easily used by a nonarts specialist.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional package will be to help participants: (1) To understand a rationale for aesthetic education in the elementary school, (2) to note concepts and materials applicable for curriculum development in aesthetic education, (3) to understand the role of the arts in general education, and (4) to relate the aesthetic qualities of our environment to the elementary classroom and the arts.

PATTERNS OF USE

How Does A Rainbow Feel?: An Introduction to Aesthetic Education will be a self-contained unit of instruction with activities that are sequential and cumulative. It may be used to provide instruction in the areas of aesthetics, aesthetic education, elementary education, curriculum development, and arts in general education. It may be administered by a teacher trainer or worked on independently by a teacher group with the aid of a provided syllabus. These materials will be applicable to a variety of educational settings, including traditional university courses and short-term workshops.

ASSESSMENT PROVISIONS

Learning will be assessed by the teacher trainer and the participants. Specific procedures will be delineated during development.

TIME REQUIREMENTS

It is estimated that these materials will take approximately 10 hours to complete, depending on the class size, the educational setting, the time the teacher group is together, whether it is taught alone or is part of a larger curriculum plan, and how much utilization of outside activities occur.

IMPLEMENTATION PROCEDURES

How Does A Rainbow Feel?: An Introduction to Aesthetic Education will not require a specialist teacher. Participants will probably work individually and in small groups to enhance interaction. A working space will probably be necessary. Specific procedures appropriate to the learning experiences will be delineated during the development cycle.

Personnel Required for Product Adoption and Implementation

A teacher trainer without special training in aesthetic education will be able to implement this unit of instruction. Curriculum consultation is available from CEMREL, Inc. Costs for such services can be obtained from this organization.

MATERIALS AND EQUIPMENT

Unknown at this time.

ASSURANCES AND CLAIMS

This instructional unit is presently in development. When completed, it will be tested as defined in the basic program plan (CEMREL, 1972) and a general plan for evaluating the aesthetic education program's Teacher Education packages (Manis, 1974). At that time, appropriate assurances and claims will be made.

WHAT DO YOU SAY AFTER YOU SAY "I LIKE IT"?: A METHOD OF AESTHETIC PERCEPTION (PART OF THE AESTHETIC EDUCATION PROGRAM)

A teacher education package which is an introduction to aesthetic education concepts

The Teacher Education series of the Aesthetic Education Program includes this instructional package, which deals with an introduction to aesthetic education concepts and a method of aesthetic perception. The preservice and inservice teachers, for whom the materials are designed, use a variety of resources: a slide tape ("To Make New Again") with related discussion questions; a book entitled *How Many Ways Can You Look At a Turtle?*, which includes an explanation of Harry Broudy's method of aesthetic perception and activities centered around it; pertinent quotations on aesthetics, aesthetic education, the use of the arts as a vehicle for aesthetic education; an activity section based on the concept of "education of the senses," and relevant reference readings from experts in the field of aesthetic education. An activity involving discussion and arrangement of photographs of a bus station for its sensory, formal, and expressive qualities (Broudy) illustrates that aesthetic qualities can be found anywhere. Final activities in the materials give the participant the opportunity to choose from various arts activities designed to illustrate knowledge gained in previous activities. Throughout the materials, suggestions are made as to how this knowledge can directly be applied to the elementary classroom.

These materials encourage the participants: (1) To begin to define aesthetic education and the need for it in the schools; (2) to understand the arts as a vehicle for exploring aesthetic education; (3) to become familiar with commentary from individuals in a variety of fields who have been concerned with concepts in aesthetic education; (4) to gain a practical approach to understanding aesthetic perception by applying Harry Broudy's method of looking at the sensory, formal, and expressive qualities of an object or experience; (5) to participate in activities that emphasize Broudy's concept of the sensory—activities which increase the participant's personal sensory awareness and which can be easily done by a teacher in an elementary classroom; (6) to understand that, although the arts are clear examples of the aesthetic qualities in our world, such qualities can be found and explored anywhere; and (7) to actively participate in arts activities which will begin to familiarize them with possibilities for using the arts in the classroom.

Sample Lesson

"A Method of Aesthetic Perception" *How Many Ways Can You Look At a Turtle?*

This lesson is designed to provide the preservice or inservice teacher with a practical approach to aesthetic perception. Harry Broudy's method of looking at an object from its sensory, formal, and expressive qualities is presented in a simple and concise way, with illustrations indicating that an analysis method is easily applicable to both arts and nonarts objects and events. (The excerpt from *Enlightened Cherishing* in which Broudy discusses this method in detail is also presented in the reference readings as reinforcements.) The participant is first presented with photographs of a turtle, emphasizing that any object can be looked at in a variety of ways (such as, biologically, scientifically, how parts make up a whole, humorously, abstractly, and metaphorically). It is then emphasized that any object can also be looked at for its aesthetic qualities, and this is done in the text for the participant with a photograph of a turtle and a delineation of its sensory, formal, and expressive qualities. The participants are encouraged to bring in a natural object and go through the process again with the object to reinforce what they learned from the photographs of the turtle.

Throughout this set of materials, the participant is asked to keep a journal in which observations, perceptions, notes, and comments can be recorded. After the turtle photograph, the participants begin defining these aesthetic qualities and recording their perceptions in their journals. The next photograph is of a natural object, a cactus. The formal and expressive qualities are printed for the participant, who is asked to fill in the sensory qualities. In the next photograph, a people-created object of a series of telephone booths is illustrated. The sensory and expressive qualities are provided. The participant is to fill in the formal qualities. Finally, a photograph of birds perched on branches is provided. The participant fills in the sensory and formal, while the expressive qualities of the photograph are provided.

When the participant has a working knowlege of these terms, the focus is turned to the arts. A Trova sculpture is pictured and the sensory, formal, and expressive qualities of this art object are provided. Following this is a photographic collage indicating the scope and variety of arts forms. Finally, activities and discussion questions are provided which tell the participants to attend an arts event or bring in an actual arts object, and use Broudy's method of analysis in perceiving the arts object or event aesthetically and to discuss how such analysis heightens their appreciation and critical judgments.

Asking the participants to actually seek out such arts experiences is an important goal of these aesthetic education materials. Although every activity is self-sufficient within a classroom or workshop situation, it is also crucial for participants to have additional outside experiences to see how concepts relate to the everyday world. Such activities and discussion questions are provided throughout and are strongly encouraged. Therefore, each lesson may vary in length depending upon the amount of time alloted for such activities by the teacher education group.

SUBJECT AREA(S)

Teacher Education: Aesthetics, aesthetic education, and the arts.

Introduction to the idea of aesthetic education; how using a method of aesthetic perception can enable the individual to find aesthetic qualities both in the arts and in the "everyday" world; the relationship of aesthetic education and the arts; an intellectual, historical perspective on viewpoints regarding aesthetic education; the concept of "educating the senses" as a basis for beginning an aesthetic education curriculum.

INTENDED USERS AND BENEFICIARIES

These materials are designed for preservice and inservice teachers at the elementary level, although they would also be beneficial for secondary school teachers. They may be administered in a college course curriculum or in a teacher workshop situation. Although the arts are used as examples for teaching aesthetic education in these materials and the materials can be taught by arts specialists and aesthetic education specialists, the information and activities can also be easily used by a nonarts specialist and can give the participants varied experiences in several art forms (literature, drama, dance, visual arts, and music).

GOAL(S) OR PURPOSE(S)

The purpose of this instructional unit is for participants: (1) To identify and explain in a general way the goals and rationale of aesthetic education; (2) to note that the arts are a vehicle for the expression of the aesthetic values of a culture; (3) to consciously attend to and experience sensory data for their intrinsic value; and (4) to perceive, react to, and analyze those factors in an experience or object which contribute to or detract from its aesthetic character by using a method of aesthetic perception.

PATTERNS OF USE

What Do You Say After "I Like It"?: A Method of Aesthetic Perception is a self-contained unit of instruction with activities that are sequential and cumulative. It may be used to provide instruction in the areas of aesthetics, aesthetic education, elementary education, and arts in general education. It may be administered by a teacher trainer or worked on independently by a teacher group with the aid of the provided syllabus. These materials are applicable in a variety of educational settings, including traditional university courses and short-term workshops.

ASSESSMENT PROVISIONS

Learning is assessed by the participants and/or the teacher trainer. Students are given a preactivity asking them to define aesthetic education. This is also asked at the end of the materials, and participants can evaluate the growth of their perceptions, vocabulary, and understanding. Throughout the materials, participants are encouraged to use the provided method of aesthetic perception as a means of evaluation and analysis and to compare, contrast, discuss, and share their questions, comments, and insights with each other. Guidelines for discussion questions are provided as a means of suggesting standards for discussion. Participants are also asked to evaluate each others' work in the activity sections.

TIME REQUIREMENTS

What Do You Say After You Say "I Like It"?: A Method of Aesthetic Perception takes approximately 10 hours with individual sessions being not less than 45 minutes to complete depending upon the cl[illegible]s size, the educational setting, the time the teacher group is together, whether it is taught alone or is part of a larger curriculum plan, and how much utilization of outside activities occurs.

IMPLEMENTATION PROCEDURES

What Do You Say After You Say "I Like It"?: A Method of Aesthetic Perception does not require a specialist teacher. This set of instructional materials has been tested with both preservice and inservice teachers. It is recommended that it be taught in small groups to enhance interaction and allow a teacher trainer to respond specifically to each participant. Students will require space for several of the activities and will need room to spread out some of the materials. The syllabus outlines all such procedures and has been rated as useful in testing situations.

If there are teacher trainers with a background in aesthetic education or the arts, they are encouraged to relate these materials to their own curriculum, bring in additional resources, and relate the learning experience to the specific needs and background of the teacher group, if possible.

If no teacher trainers have such a background or if the group is working independently, the syllabus provides all necessary information for implementation.

A teacher trainer is strongly encouraged to make the outside activities an integral part of this learning experience. Consumables are minimal and the materials in the package are easily manipulated and stored.

Personnel Required for Product Adoption and Implementation

A teacher trainer without special training in aesthetic education can implement this unit of instruction. Curriculum consultation is available from CEMREL, Inc. Costs for such services can be obtained from the same organization.

ASSURANCES AND CLAIMS

Assurances

Information gathered by careful observation and questionnaires at each of the four field test sites indicated no harm has resulted from the use of this product.

Packages are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such bias or inappropriateness of content in the package is directed to qualified persons in order to consider how the materials should be revised to eliminate such shortcomings.

Information gathered from four field tests of the materials indicates that the materials can stand alone in the hands of a competent teacher trainer in preservice and inservice training settings.

Claims

A major claim to be made about the Aesthetic Education Program's instructional materials in teacher education is that they represent the only comprehensive teacher education curriculum resource based on aesthetic education that has been developed in the United States, using the carefully defined development and evaluation procedures basic to the concept of an educational laboratory.

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the instructional materials. A formative evaluation is carried on during the creation of each package of materials developed by the program. In the early stages of development, trained observers carry out an observational monitoring of a trial implementation of the package, or various package components, in prototype form. The information derived from this monitoring serves as a basis for revising the materials for further trials. It also serves as an early warning system for the detection of any intrinsic shortcomings in the package. After revision, a second evaluation is carried out in four or more teacher-training settings. In this stage, the materials must pass three major tests: First, they must be in keeping with the overall goals of the program; second, there must be evidence that the materials can stand alone in the hands of a competent teacher trainer; third, the materials must meet certain package-specific objectives, observable in the behavior of the persons who have studied the materials. After the above testing of the materials, the materials are revised on the basis of information gained during testing.

The evaluation of this product was carried out in four diverse preservice and inservice teacher-education settings. Two were school district inservice workshops, and two were university-based courses in which the participants were predominately preservice, elementary teachers. Observation and questionnaire data indicate that even teacher trainers who are not specialists in one or more of the arts are able to successfully implement the package. Qualitative assessment journals completed by package users indicate that most users are able to complete the instructional activities in the manner intended by the developer.

User satisfaction and judgments about the worthwhileness of the package were universally positive during the evaluation.

AESTHETIC EDUCATION LEARNING CENTERS (PART OF THE AESTHETIC EDUCATION PROGRAM)

A cooperative community effort to develop innovative teacher education programs in aesthetic learning

If Aesthetic Education is to become a reality in the Nation's schools, some basic changes must be made in Teacher Education Programs in the arts and aesthetics. CEMREL, Inc., has assumed responsibility for bringing information, needed to implement innovative teacher education programs, to such organizations as colleges and universities, school districts, and community arts groups. The Aesthetic Education Learning Centers (AELC), developed by the Aesthetic Education Program at CEMREL, Inc., are the result.

The AELC is a cooperative effort among agencies (e.g., schools, teacher education institutions, arts organizations, artists, community service organizations, State departments of education) working with each other and with CEMREL, Inc., in the development of aesthetic education programs. A minimum requirement in an AELC is at least three cooperating elementary schools and one or more cooperating agencies. The physical components include: modular learning environment, *Handbook: Teacher Education for Aesthetic Education*, *Handbook: Installation of Aesthetic Education Programs in Schools*, "Interagency Models for Implementing Aesthetic Education," Aesthetic Education instructional packages for students and teacher, and services such as workshops and consultants.

The modular components of the centers were carefully planned to be aesthetically pleasing and to provide an example of what an aesthetic learning environment can be. Through its activities via inservice and/or preservice courses, workshops, and institutes, the AELC provides teachers, student teachers, children, administrators, and university and college personnel with the instructional and conceptual resources necessary in gaining knowledge, skills, and confidence in handling aesthetic content. It is also a vehicle for implementing new programs in aesthetic education in schools. In addition, each center can provide individuals and groups with the necessary focus and orientation for improving the aesthetic climate of the community.

SUBJECT AREA(S)

Aesthetic Education: Teacher Education, Elementary Curriculum Designs, Learning Environment, Interagency Cooperation for Educational Change

The following are the major components of this product:

(1) *Handbook: Teacher Education for Aesthetic Education.* Areas covered in this document include course outlines for preservice and inservice instruction, the role of the arts specialist and the elementary classroom teacher, teaching/learning strategies, how to use community and instructional resources, and case studies of successful implementation of programs in Aesthetic Education

(2) *Handbook: Installation of Aesthetic Education Programs in Elementary Schools.* This document discusses Aesthetic Education as a separate area of study as well as how it can be related to the ongoing curriculum. Also included are procedures for implementation and evaluation.

(3) *Learning Environment.* The modular design based on circular configurations offers many arrangements to the user. Each component is separate and movable so the spaces can continually be altered according to function.

(4) *Interagency Models for Implementing Aesthetic Education.* Guidelines for bringing together arts activities and presentations by arts organizations, service organizations, governmental units, and business groups with Aesthetic Education Programs in the schools are provided.

INTENDED USERS AND BENEFICIARIES

The potential users and beneficiaries of the Aesthetic Education Learning Center Plan include a wide range of people. The immediate users in the field tests include classroom teachers, arts specialists, curriculum planners and developers, teacher education staffs (inservice and preservice), arts organizations which work with schools, learning environment planners, principals, and students.

GOAL(S) OR PURPOSE(S)

The goals of the Aesthetic Education Learning Centers are: (1) To provide an aesthetic environment for learning to both teachers and students, (2) to provide a facility and materials which are flexible enough so that various teacher education programs in aesthetic education can be designed and implemented, (3) to generate various methods for utilizing and extending the use of CEMREL's aesthetic education materials, (4) to generate new programs for teacher education in aesthetic education, (5) to establish Aesthetic Education Programs in elementary schools, and (6) to generate interest in improving the design of classroom environments.

PATTERNS OF USE

Eight centers and twenty-seven cooperating schools in various geographic locations are implementing the total Learning Center concept. There have been six basic patterns developed within the eight centers. The unique aspects of the patterns are due both to the combination of cooperating agencies working with AELC and their program structures. These are as follows:

1. CEMREL, professional arts organization (Performing Arts Foundation, Long Island, New York); and Board of **Cooperative Education Services (BOCES):**

Focus: Provides performing artist to work with teachers and children.

2. CEMREL, school district, and local university (This pattern is in operation in Memphis, Tennessee, and Jefferson County, Colorado.)

Focus: On aesthetic education staff development and curriculum revision; each cooperates with a local university; one is housed in an elementary school and the other is in a district-operated Staff Development Academy.

3. **CEMREL, adjoining school districts, university consortium:**

Focus: Three school districts (Oakland and Antioch, California, and New York City), in cooperation with several universities, joined efforts to form a Center which is housed in an arts-centered elementary program in one of the districts.

4. **CEMREL, arts council, and private university:**

Focus: A consortium arrangement between a private university (Oklahoma City University) and a local arts council (Oklahoma City) comprise another approach.

5. **CEMREL and State university:**

Focus: A State university (Illinois State University) incorporates the Center into its CORE-oriented elementary teacher education program.

CEMREL, State department, and school district:

Focus: A State department of education (Pennsylvania) in cooperation with a local school system has located the **Center in a vacated school building, works with State** Intermediate Units, and cooperates with a senior citizen and a special education program located in the same building.

ASSESSMENT PROVISIONS

Each site is provided assistance in developing those assessment devices which meet their needs. Examples of such devices include attitude scales and checklist for categories of implementation, i.e., designation of staff, community resource utilization. The instructional resources have built-in assessment devices. The handbooks include Aesthetic Education Program findings and procedures, as well as assessment devices developed at the eight centers.

TIME REQUIREMENTS

The amount of time required will vary according to whether partial components are implemented or a total program is developed. Once it is ordered and manufactured, a learning environment could be installed in 2 days; courses/institutes can last from 3 days to a full term. Time requirements vary according to the scope of work decided upon by the site. The variations relate to the level of implementation, i.e., a partial or total program in aesthetic education. A complete AELC program can be estimated to take 2 years for total implementation.

IMPLEMENTATION PROCEDURES

A series of steps is followed in the installation of an AELC program: (1) The agency contacts CEMREL, expressing interest in the total AELC program or any of its components; (2) an initial meeting is scheduled for key personnel of the agency to discuss program implementation, e.g., the nature of the program, services provided, costs, responsibilities; (3) a second meeting is scheduled if necessary to answer questions and make presentation to other parties within the agency; (4) a decision is made for implementation and agreements are signed; (5) a specific time line is established and an agency staff is selected; (6) existing curriculums are assessed and an aesthetic education curriculum is designed; (7) instructional resources are determined and purchased; (8) a learning environment is installed; (9) staff development training (e.g., administrator seminars, curriculum development workshops, instructional resource familiarization workshops) takes place; (10) community involvement is determined and secured; (11) assessment and documentation procedures are established; (12) the program or component is implemented; (13) assessment and documentation of implementation take place; and (14) a final report, which includes recommendations for revision, and expansion is made.

Summary Cost Information

To install a total AELC program would cost approximately $60,000 over a 2-year period. Variations occur because of different factors, e.g., the size of a district, amount of instructional materials, number of learning environments. The cost cited is based on the above materials list.

ASSURANCES AND CLAIMS

Assurances

Since the testing of this product is not yet complete, only limited assurances and claims can be made at the present time. The testing is proceeding as defined in the *Basic Program Plan* (CEMREL, 1972) and the *Aesthetic Education Group Model*, (CEMREL, 1974). At the completion of the testing in November 1975, additional assurances and claims will be made, as appropriate.

Information gathered by careful observation and questionnaires at each of the eight AELC's indicates that no harm has resulted from the use of this product.

Plans and instructional materials are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such bias or inappropriateness of content is directed to qualified persons in order to consider how plans and materials should be revised to eliminate shortcomings that are identified.

Claims

At all stages of development, a national advisory committee of educational psychologists, educators, and arts educators reviews the substance and form of the plans, instructional materials, and information relevant to the actual operation of the centers. An evaluation by a person trained in field study techniques is carried on during the implementation of the centers in order to study their development and operation and to detect any shortcomings in the plans and materials or in their implementation. In that way inappropriate or harmful content can be corrected at an early stage. (See *The Aesthetic Education Group Model*, CEMREL, 1974.) In addition, the Aesthetic Education Program's instructional materials used in the Centers undergo separate evaluation as noted elsewhere in this catalog and as defined in the *Basic Program Plan* (CEMREL, 1972).

Based on preliminary information gathered, the following claims are made: (a) the centers and their components can be installed, and the installation is manageable in a variety of institutional settings; (b) the centers are able to undertake their own planning and programming after installation; (c) the centers can develop a diversity of approaches to inservice and preservice teacher education in aesthetic education; and (d) the centers can facilitate communication and cooperation among diverse educational and arts programs.

AESTHETICS IN THE EVERYDAY WORLD (WORKING TITLE) AND SHAPES (TELEVISION PROGRAMS) (PART OF THE AESTHETIC EDUCATION PROGRAM)

A program with the goal of having the viewer accept aesthetic values as important to human life and society

Just as human beings need social and political experiences, so they also need the aesthetic-experiences with intrinsic value and meaning which enrich life: A flawless blossom, a flash of comprehension, a painting which expresses a thought or an emotion. Through the ability to see and to create, each person can give a sense of order and a direction to life. Aesthetic values provide the necessary balance between one's rational mind and one's emotions. They draw deeply on the full range of resources within each individual.

Planning a television program on aesthetics grew out of the desire of the Aesthetic Education Program to introduce aesthetic values and their importance to a large general audience. The general goal of the program is to have the viewer accept aesthetic values as important personally and societally. Television suits this goal quite well because of its visual immediacy and mass-audience reach. It has a proven ability to attract and hold the attention of viewers, and it extends into every socioeconomic level.

The content for the program was selected on the basis of the concepts delineated by the Aesthetic Education Program over the years and the translation of those concepts into multimedia learning packages. The television program will be an aesthetic entity and will not merely "show" or "talk about" aesthetics.

As a prototype for the full 1-hour program, a 15-minute experimental video segment entitled *Shapes* was undertaken to explore the working relationship between CEMREL, Inc., and a national production facility. The premise of this experimental show was taken from three Aesthetic Education Program packages dealing with shape—*Shapes*, *Shape Relationships*, and *Shapes and Patterns*. When the feasibility of the working relationship had been established, production proceeded on the full 1-hour program.

Sample Segment

The opening of the show is "cold"—no opening titles are given, nor is theme music introduced. It opens on a bare stage. A female mime enters with the huge bag of junk she has collected. She dumps the bag and begins to sort through the contents. She inspects each object—touching, shaking for sound, sniffing, or occasionally tasting. The expressions are humorous as the woman gleefully accepts some items and dejectedly throws others into a reject pile.

The mime then begins to build a sculpture from the selected items. When the building is completed, the camera pulls back to reveal a whimsical junk sculpture depicting the five senses. (The sculpture used for this segment is being created by Robert Gilbert, the well-known sculptor shown in the Academy Award-winning documentary "The Magic Machines.")

Throughout the hour show, the 7-foot sculpture and the female mime are used to provide transitions and whimsy. The host, who is the balladeer, functions as a friendly storyteller who sums up the points being made.

The next segment will illustrate use of the five senses in a setting taken from the everyday world. First, the sights, sounds, tastes, and smells of the event are explored. Next, there is a kinetic segment to illustrate the relationship between aesthetics of everyday movements and movement in dance. Then, in the movement segment, various artists' interpretations of moments in movement are intercut. After the movement segment, there is a purely visual experience that explores movement, form, color, and texture.

SUBJECT AREA(S)

Sense perception, video art, visual arts, music, dance, literature, drama, and environment.

Aesthetics in the everyday world, use of one's senses in a special way to perceive aesthetic qualities in the world, the creative process in the everyday world, and personal decisionmaking pertaining to aesthetics are topics which are also included.

INTENDED USERS AND BENEFICIARIES

The target audience for this program is a general television-viewing audience which includes the classroom teacher and the parent of the schoolchild.

AESTHETIC EDUCATION

RD 010 042

GOAL(S) OR PURPOSE(S)

The purposes of the television program are for viewers: (1) To perceive the aesthetic dimensions of living—the aesthetic potential inherent in the use of all our senses; (2) to value such aesthetic movements, events, and happenings; and (3) to transfer or relate the perceiving and valuing of aesthetic moments into daily decisionmaking.

PATTERNS OF USE

The program will be available for general television viewing on national television networks and/or local television broadcast and will also be available on 16mm film. Designing the program for general audiences provides maximum flexibility for its use. It is the intent of the Aesthetic Education Program that the program be educational and entertaining to the general audience and be available for use as teacher training materials.

TIME REQUIREMENTS

The program will be 1 hour long.

IMPLEMENTATION PROCEDURES

The program will be entirely self-explanatory and will need no special introduction before it is shown.

ASSURANCES AND CLAIMS

Assurances

All products developed by the Aesthetic Education Program are carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such material in the program will cause an appropriately directed review of the content by a qualified person not connected with the project. The content will then be revised to eliminate such shortcomings.

Claims

Developmental evaluation of *Shapes* has shown that it is appealing to children in grades 2, 3, and 4, commanding good levels of visual attention and receiving a high enjoyment rating from them.

Evaluation of the major program to date has only been based on segments. No evaluation of a completed prototype has been undertaken. Although initial indications have been positive in regard to audience enjoyment, no substantial claim can be made at this time.

RD 010 043

THE FIVE SENSE STORE (PART OF THE AESTHETIC EDUCATION PROGRAM)

A traveling exhibit which provides students with a general introduction to the concepts of aesthetic education

The *Five Sense Store* is a traveling exhibit which illustrates the variety of experiences available to students who participate in the Aesthetic Education Program.

In the *Five Sense Store: An Aesthetic Design for Education* you can watch TV, play with a word picture puzzle, listen to a radio, stretch yourself in an elastic band, pile up styrofoam blocks to build your own environment. This three-part exhibit draws upon the environment and the arts to involve children in experiences of aesthetic choice and introduce new concepts in education and aesthetic awareness.

As a visitor to the exhibit you are first met by the kaleidoscope of sounds and images in today's sound/image society. Looking into large cylinders, you see television programs, listen to a radio, or hear a cacophony of sounds from our everyday environment. Images narrow your focus to the use of these same media in the schools.

You see that children are the receivers of information through the technological hardware and they are creators through the media. You see students using cameras, working computers, listening to tapes, editing film—the range of media in classroom and studio situations. A large panel confronts you with some serious questions: How much are children allowed, even encouraged, to use the media? How can their experiments with technology be made more involving? How can we help them really use the technology, come to value it, and, ultimately, affect the quality of the sound/image society itself?

Specifically, how can aesthetically designed instructional materials that use the technology be created? This question brings you to a long, serpentine wall that graphically shows the process of developing aesthetic education materials. Starting with the content, an idea is built into instructional materials that are tested, revised, and used by children in the schools. Along with this graphic visualization you hear taped interviews with students and teachers and see slides of children working with aesthetic education program materials.

SUBJECT AREA(S)

An aesthetic design for education: The arts.

The *Five Sense Store* provides a general introduction to the concepts of aesthetic education. The activity stations within the exhibit allow the students to feel textures, to write plays, to express emotion through dramatized body movements, to create new word combinations, to make visual compositions with shapes, to examine a photographer's point of view, to arrange a musical composition, and to design a personal space. A tour through the exhibit would serve as an appropriate introduction to any of the Aesthetic Education Program age materials or may be used to develop a general awareness of aesthetics in those communities where the materials are not being used in the schools.

INTENDED USERS AND BENEFICIARIES

The exhibit is designed for participation of children from age 5 and older. Adults, as well, enjoy the exhibit and profit from it; not only do they have the opportunity to see what is available in aesthetic education for children, but for many of them the exhibit may also be a first exposure to aesthetics.

GOAL(S) OR PURPOSE(S)

The purpose of the *Five Sense Store* is to: (1) Show a model for developing instructional materials which fill the need for using modern technology and design techniques in a quality way; (2) demonstrate the materials of the Aesthetic Education Program; (3) emphasize that aesthetic considerations should be an integral part of the development of all instructional materials—books, films, charts, etc.; and (4) make available to museums a traveling exhibit which can serve as a launching pad for new ideas in arts education.

PATTERNS OF USE

The Five Sense Store is a self-contained traveling exhibit with a large variety of activities that are taken from the experiences offered in the Aesthetic Education Program materials. It may be used by museums and other institutions that wish to offer their communities an opportunity to experience new ideas in arts education. The exhibit serves as a participatory display for children of all age levels, giving them an initial exposure to aesthetic education; as a source of information for adults, creating an aesthetic awareness of their environment; and as a training center for teachers, giving them the opportunity to examine various concepts in arts and aesthetic education.

ASSESSMENT PROVISIONS

The first public opening at the National Collection of Fine Arts in Washington, D.C., was a test site. Because of the variety of cities the museum travels to and the differences of intent by each sponsor, CEMREL does not furnish standard evaluation. However, each site has provided for its own evaluation plan. The information is then furnished to CEMREL and the Smithsonian Institution Traveling Exhibition Service (SITES).

TIME REQUIREMENTS

A minimum of an hour and a half is required for students to go through the exhibit. More time will be needed when children wish to take part in all of the activities.

IMPLEMENTATION PROCEDURES

Museum staff, docents, and teachers who will be involved in conducting tours through the *Five Sense Store* should study the *Five Sense Store Handbook*. Workshops may be planned previous to the opening of the exhibit to acquaint the staff with the exhibit. A section in the handbook gives guidance for what should be covered in such workshops.

The *Five Sense Store* requires a rather large area in for which to be exhibited. It is designed to be set up in three rooms: Room 1 deals with an aesthetic design for education; room 2 is the activity area and allows for participation; room 3 is the space place and allows for personal involvement in designing a space.

CEMREL recommends approximately 4,500 square feet for the exhibition: Preferably divided into 1,500 sq. ft. in each of three rooms.

Approximately 2 groups of 20 to 30 children can be handled in the 2 activity areas in 20-to 30-minute sessions.

Audiovisual equipment is provided with the exhibition as an integral part. Maintenance required is limited to replacing bulbs and to the original wiring for each installation. Refurbishing is done on a yearly basis.

The *Installation Guide* describes processes to install the sound-image society and activity stations, and CEMREL personnel are available to install the space place.

The *Handbook* provides procedures for adults who will be staffing the activity stations and the space place.

Students of kindergarten age and up are able to deal with any of the activities unless there is a specific note to the contrary given in the guidelines for that activity.

Personnel Required for Product Adoption and Implementation

Because of the unusual nature of this exhibit, its optimum success depends on the efforts of well-prepared museum staff and docents and well-oriented teachers. A minimum staff is 4 adults to 30 students. The staff should be prepared through workshops which are described in the handbook.

ASSURANCES AND CLAIMS

Assurances

The first public opening at the National Collection of Fine Arts in Washington, D.C., was a test site. Both CEMREL and the Smithsonian used this location to evaluate and revise the exhibit. Changes to make the exhibit more durable and transportable were made after the trial opening.

Since being revised, it has traveled to eight additional sites and has had relatively no trouble adapting to any situation or environment. Although the *Five Sense Store* is a singular unit designed to travel, the modular "furniture" has been adapted to the aesthetic education learning centers, confirming that it could be replicated if desired.

At present, the developers have not received any reports of harm associated with the use of this exhibit. Also, the materials used in the *Five Sense Store* were carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content.

Claims

The major claim to be made about CEMREL's *Five Sense Store* traveling exhibition is that it is the only one of its kind that allows children and adults a "hands on" relationship with aesthetic education materials in various community settings.

The exhibit broadens knowledge of aesthetic education. Teachers and students responded enthusiastically to the exhibition, tying it back to instruction in the classroom. For children the exhibit is self-motivating and self-directed. It is an excellent training program for teachers and teacher education students. It explains techniques of research and development of educational products.

The exhibit offers children opportunity to experience aspects of dance, theater, photography, and visual arts.

Although intended for a 2-year tour, because of requests the exhibit's schedule has been extended a third year.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
The Five Sense Store				
Rental fee for six weeks	1 per exhibit	800.00		
Shipping cost		1,000.00

SWRL SONG RETRIEVAL SYSTEM

An integrated, computer-assisted system to locate or analyze songs with desired characteristics

Locating songs with desired characteristics or analyzing a repertoire of songs according to music characteristics has heretofore been a "search and seek" art. The *SWRL Song Retrieval System* (SRS) makes it possible to do this efficiently and replicably. SRS is an integrated system of five components: A code book, an analyst training guide, data files, computer program package, and a hard copy file.

The code book is a checklist of concepts which collectively may be used as descriptors in distinguishing songs. The concepts are organized by variables such as meter, scale, range, and origin. The analyst training guide provides instruction in the use of the code book as well as definitions for each musical concept listed there. Data files include the repertoire of songs available for analysis. The Computer Program Package includes a retrieval program, an update program, and a translator program. The hard copy file is output information generating the identification numbers of all songs satisfying the request criteria involved in the analysis.

The data files currently include 4,500 songs obtained from 71 sources that include songs generally considered appropriate with elementary school age children.

SUBJECT AREA(S)

The subject area is music.

INTENDED USERS AND BENEFICIARIES

The intended users are music researchers and educators.

GOAL(S) OR PURPOSE(S)

The goal of this program is to locate songs with desired characteristics or to analyze a repertoire of songs according to music characteristics.

PATTERNS OF USE

Users may form their own repertoire of songs or use extant data files. The computer software is transferable to other computer configurations.

IMPLEMENTATION PROCEDURES

SRS is currently resident at the computer centers of SWRL and UCLA. Interested inquirers may use the system by telecommunication or batch mail.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

Mathematics and Science
*Reading and Language Arts
Reasoning and Problem Solving

OVERVIEW

PHYLLIS KLEIN
Elementary Education Mathematics Consultant
Watertown, Massachusetts

and

EDWARD ESTY
Research Associate
Basic Skills Group
National Institute of Education
Washington, D.C.

The quality of mathematics and science[1] education has received widespread attention in the past 20 years. Some mark the beginning of national interest in science and technology to 1957, in response to the launching of the first Soviet satellite, Sputnik I. The Physical Science Study Committee (PSSC), which began its work formally in 1956, heralded the era of sweeping curricular reform and served as a model for early efforts in educational innovation. Within the period 1956-74, over 200 noncommercial programs in science and mathematics have been in operation in the United States. The evolution of thought and accomplishment in these fields can be studied in the *Ninth Report of the International Clearinghouse on Science and Mathematics Curricular Developments*, a joint project of the American Association for the Advancement of Science and the Science Teaching Center of the University of Maryland.[2]

The height of activity in curriculum development occurred in the mid-1960s. Included in the first generation of federally supported projects were the School Mathematics Study Group (SMSG), the University of Illinois Committee on School Mathematics (UICSM), the Madison Project, the Minnesota Mathematics and Science Teaching Project (MINNEMAST), and the Arithmetic Project, to name just a few. Although each of the projects was unique in its outlook and philosophy, the reform that was initiated was viewed as a single phenomenon: "The new math." Textbook series and State and local curriculum guides reflected the changes in mathematics teaching with varying degrees of success. Interpretation and analysis of the subject received local and nationwide exposure. Public debates over the merits of the new programs and cries for evidence of their success in terms of raised achievement test scores continue to occur, even as a second wave of curriculum programs is under development. Critics advocate a back-to-basics approach which emphasizes computational skills.

Although "the new math" is a catchall term for the two-decade reform in school mathematics, it should be understood that the curriculum projects represented many different and even opposing views of what should be included in an ideal curriculum. "Using the phrase 'New Math' to describe this era," says the National Advisory Committee on Mathematical Education (NACOME), "gives it the nature and flavor of such phrases as 'The Roaring Twenties' or 'The Great Society'."[3]

The introductory and trends section of this overview was developed by Ms. Phyllis R. Klein, who is a teacher educator and elementary mathematics curriculum developer, formally Coordinator of Teacher Education, The Comprehensive School Mathematics Program, CEMREL, Inc.

The overview section describing products funded by the National Institute of Education was prepared by Dr. Edward Esty, Research Associate, Basic Skills Group, National Institute of Education, Washington, D.C.

The major task before school decisionmakers is one of reassessment: Which aspects of the curriculum reform will best meet the current and future needs of the students they serve?

Review of research developments

If any generalizations can be applied at all to the work of curriculum projects in the past two decades, it can be safely said that the emphasis was on the understanding of mathematical processes rather than on the rote memorization of isolated facts, that the study of mathematics was to be considered a unified whole, and that the content was to include more than just the manipulation of numbers. *Goals for School Mathematics*, the 1963 report of the Cambridge Conference on School Mathematics, advocated substantial enrichment of the entire school program from kindergarten through secondary school. The recommendations for the K-6 curriculum included topics such as geometry, probability and statistics, functions, graphs, equations and inequalities, the algebraic properties of number systems, and work with logic and sets. In the intervening years since the *Goals* report was issued, these content changes have been slow to appear in texts and curriculum guides, if they have appeared at all.

Which aspects of the reform movement, then, have been incorporated into school mathematics? For one, the term

---

[1] Because all but three of the products described in this section are mathematics related, this overview focuses on developments in mathematics instruction.

[2] Periodic summaries of the ongoing research and development activities in mathematics education can be obtained from such sources as the *Yearbooks* of the National Council of Teachers of Mathematics, the *Arithmetic Teacher*, the *Mathematics Teacher*, and the *Journal for Research in Mathematics Education*. Additional periodic reviews of various aspects of mathematics education are the *Mathematics Education Reports* available from the ERIC Information Analysis Center for Science, Mathematics, and Environmental Education (Columbus, Ohio 43212). A good review of the status of mathematics education in this country is the recent *Overview and Analysis of School Mathematics, Grades K-12*, which was prepared with NSF support and is available from the Conference Board of the Mathematical Sciences (Washington, D.C. 20037).

[3] Hill, Shirley, et al. *Overview and Analysis of School Mathematics, Grades K-12*. Washington, D.C.: Conference Board of the Mathematical Sciences, 1975, pp. 21-22.

"arithmetic" has been replaced by "mathematics." Historical systems of numeration and counting in number bases other than 10 became popular ways to begin each year's study. The vocabulary of set theory found its way into books, even in first grade, where addition, for example, was presented in terms of forming the union of two disjoint sets of chickens. The commutative, associative, and distributive properties were to be found in vocabulary lists of elementary school texts, although their useful aspects in computation were frequently ignored. Varying amounts of geometry, probability, functions, and graphs were also present in texts. But the actual impact of the innovations in curriculum "has been modest relative to expectations."[4]

In 1975, the National Council of Teachers of Mathematics commissioned a survey of second- and fifth-grade instructional practices. The 1,200 responses from teachers of these grades showed that textbooks, objectives, and testing programs with which they were familiar emphasized computation with whole numbers and fractions, concepts of number and operations, and problem solving and measurement. The teachers judged that relatively little class time was devoted to geometry, metric skills, graphs, statistics, probability, and relations and functions. These topics were most often skipped so that more time could be spent on "computational skills that are comfortable and valued by elementary teachers."[5]

In recent years, the mathematics reform movement has come under severe attack. Perhaps the most outspoken of the critics has been Morris Kline, professor of applied mathematics at New York University. Kline has criticized innovative programs for what he considers inappropriate content and undue emphasis on abstraction, terminology, and symbolism. His views have been both supported and challenged in professional journals and the popular press. Many mathematics educators believe, however, that such polarization ("old or new, skills or concepts, concrete or abstract, intuitive or formal, inductive or deductive[6]) is fallacious and can only seriously hamper the understanding of the spirit and accomplishments of recent innovations.

The National Assessment of Educational Progress released their findings on mathematics achievement in the summer of 1975, based on tests administered in 1972-73 to members of the elementary school, junior high school, secondary school, and adult population. While the results do not provide a definitive statement on school mathematics achievement, the "results on computation do not confirm charges that basic skills seriously deteriorated during the 'new math' era." On the other hand, the results do "suggest the need for greater attention to understanding basic concepts in topics like measurement and problem analysis."[7]

Patterns of instruction, as well as content, have undergone change. Several curriculum projects advocated the changeover from whole group instruction to alternative method of instruction. These included, either alone or in combination, individual or small-group instruction based on activity packages, task cards or instructional booklets; laboratory-centered instruction based on manipulative materials; or computer-assisted instruction.

Together with changing patterns of instruction came conflicting views about structuring the mathematical experience. Two mutually exclusive approaches have evolved. One approach is to consider the content of mathematics as a fixed entity which is composed of atomized elements. Proponents of this philosophy claim that mathematical content can be organized into a hierarchy of skills for which precise behavioral objectives can be constructed. Through a series of small steps, taken one at a time, students can make their way through mathematical content, progressing to the next level of skills only after they have shown competence in the previous level. The advocates of humanistic education believe that mathematics is a unified whole and that students should have exposure to many of the facets from their very earliest study of the subject. The proponents of this school believe that students' creativity can be stimulated by exposure to open-ended problems in somewhat of a spiral approach. As students progress, they encounter more and more sophisticated situations and begin to acquire an ever-deepening knowledge and appreciation for the interrelationship among mathematical ideas far beyond any discrete situation.

Implications for research and practitioner needs

The implications for research are manifold, both in terms of content and the ways in which it is taught. Among the needed curriculum improvements cited by the NACOME report are:

- Curriculum revision or reorganization in the light of the increasing significance of computers and calculators;
- Revision of the program in light of the increasing use of the metric system in measurement; and
- Integration of statistical ideas throughout the curriculum in an effort to increase general ability to collect, organize, interpret and understand quantitative information.

The NACOME report urges continuing attempts to find sound empirical bases for the recommendations of ongoing curriculum programs, as well as comparative studies of alternative programs. Ways must be found to teach students of all mathematical abilities. Furthermore, research is needed on objective means for identifying the characteristics of effective teaching. As with all new curriculum programs, serious attention must be paid to what is actually taking place in the classroom. Not only must the proverbial gap between theory and practice be eliminated, but it is absolutely essential that teachers receive quality inservice education which will enable them to teach the ideas in these programs effectively.

At the local school level, decisionmakers will need to find answers to some very practical questions. Which patterns of instruction are likely to work best with the population the school serves? Which philosophical view—behavioristic or humanistic—is likely to result in mathematically competent students? Should some or all of the recommendations of the *Goals* report of the Cambridge Conference be adopted in their school? What learnings will be necessary now that hand calculators have become increasingly available? How to teach students to become wise consumers? How to prepare for the imminent changeover to the metric system? How to provide inservice training and support for teachers? And the ultimate question that must be faced: If the back-to-basics movement does indeed prevail, what *is* basic to mathematical literacy?

NIE activities in mathematics and science

At the present time, most of NIE's activities in mathematics and science are being carried out in various educational laboratories and centers. NIE supports a wide range of curriculum development efforts in mathematics, primarily at the elementary school level. Brief descriptions of these efforts follow.

At CEMREL, the Comprehensive School Mathematics Program (CSMP) is developing a K-6 program, designed for all ability levels, which is unique in its emphasis on the mathematical notions of relations and functions. Also, CSMP has finished another, completely separate, program written for very able and highly motivated students in grades 7-12.

Another K-6 program, called Developing Mathematical Processes, is nearing completion at the Wisconsin Research and Development Center for Cognitive Learning. The DMP program emphasizes work with manipulative materials, making a gradual transition to more abstract representation. Through numerous measurement activities the connection is made continually between mathematics and the physical world.

The Learning Research and Development Center has both the well-known individually prescribed instruction (IPI) program in mathematics for grades K-6, and a program called individualized mathematics (IM) for the early elementary grades. IM is similar to IPI with the addition of a multitude of manipulative activities. Also, the IM program uses a hierarchical organization of objectives and instructional units that makes possible an individualization of students' paths through the program. The individualized science (IS) program is designed to develop scientific knowledge and facilitate scientific inquiry in children in grades 1-6.

The Southwest Educational Development Laboratory is working on the exploring number concepts program, which is designed for kindergarten and first-grade pupils of low-income backgrounds. The distinctive features of this program include heavy use of manipulatives, a continuous progress organization, and extensive use of cassette tapes which reduces to a minimum the need for children to read instructions.

Research for Better Schools, Inc., another education laboratory, is developing a program for grades 7 and 8, called individualized middle mathematics. The program is based on a carefully ordered hierarchy of objectives, but is designed to allow a certain amount of student choice in determining which sequence to follow.

The Southwest Regional Educational Laboratory (SWRL) has two programs that are related to mathematics, both based on materials commercially available from other sources. One of these is the learning mastery system (LMS), which is designed to give teachers a tool to manage instruction using a specific existing text series. LMS examines such a series and determines which of certain skills should be mastered. It then provides tests for those skills, and exercises that review or supplement the skills. SWRL is also developing a proficiency verification system (PVS), with information on the effectiveness of certain instructional programs in terms of the proficiencies of students, and also the degree to which these proficiencies match the aims of the developers.

Mid-continental Regional Educational Laboratory has established a similar product for use in high school biology programs. The inquiry role approach (IRA) provides a set of teacher training materials, and teacher and student materials to facilitate progress through a series of activity modules centered on a research theme. The Learning Research and Development Center has produced a similar set of films and teacher guides which supplement teaching of the biological and physical sciences in grades 1-6.

STORIES BY FREDERIQUE (PART OF THE COMPREHENSIVE SCHOOL MATHEMATICS PROGRAM)

Twenty-two stories for children (ages 5 to 14) designed to introduce fundamental mathematics concepts in an appealing manner

This collection for young people consists of 22 mathematical stories, each of which is presented in the format of a newspaper for children. Each story is printed in color on tabloid-size newsprint (17-1/2 by 11-1/2 inches) and is intended to appeal to youngsters in the 5- to 14-year-old range. The stories are completely independent of each other and need no external explanation. They may be used for individual or collective reading, at home or at school.

Each of the stories is portrayed by means of the mathematical languages of arrows, dots, and strings which reinforce the ideas of the story. One story ("Two By Two") also uses the language of a binary-decimal abacus. The versatility of these nonverbal languages is exploited as much as possible.

The young readers are personally involved in each story. They have to answer questions and use their imaginations to invent additional adventures for the characters of the story. They learn that there is room in the make-believe world of mathematics for exercising the aesthetic sense and for expressing emotions.

Nine of the stories are intended for very young children (5 to 8 years of age). Here the focus is on the anecdotal aspect of the story. One of the goals of these nine books is to make the children familiar with the nonverbal mathematical languages and to leave them with the impression that these languages are as natural and useful as their regular language.

Nine other stories concern numbers and their relationship with the world. These particular stories are about a boy and some of his friends who just happen to be numbers. The personification of numbers allows the introduction and use of "games" of mathematics through one of the most important domains of childhood—the world of fantasy. Free from usual constraints often placed upon them, the numbers invent marvelous games and dance to the tune of vividly colored arrows. These games are never frivolous. There are rules to be followed; and as a result, orderly patterns emerge as the numbers play or dance.

Of the remaining four stories, two are detective "novels" introducing some interesting mathematical problems; one concerns the elementary use of quantifiers in logic; and one emphasizes the various and very different aspects of just a simple straight line.

SUBJECT AREA(S)

Mathematics and the creative process: Introduction of some fundamental concepts of mathematics, how they combine with each other, how they react with the "real world," and how they are expressed in different graphical, calculative, and usual languages.

INTENDED USERS AND BENEFICIARIES

All youngsters ages 5 to 14. Some of the most simple stories have been used successfully with mentally handicapped children, trainable as well as educable.

GOAL(S) OR PURPOSE(S)

The purpose of this collection of stories is: (1) To provide reading pleasure for young people by presenting them with some handsome, living, and useful aspects of the mathematics of today in a fanciful make-believe setting; and (2) to give youngsters an opportunity to enjoy the aesthetic aspect of mathematics, its expressions and its languages.

PATTERNS OF USE

These storybooks are intended for both the trade market (bookstores, supermarkets, or department stores) and the school market. In the former case, parents should use the books the same way they use other books bought for their children's reading pleasure. If they are purchased for school use, they can be used as a supplement to the mathematics curriculum, as part of the reading curriculum, or as a link between the two.

The CSMP elementary school curriculum for grades K-3 makes extensive use of this collection as an integral part of its instructional program. Teachers who wish to use some of these stories in their mathematics or reading programs, but who do not have the specific CSMP lessons to which they may relate, may obtain copies of the specific lessons in question by writing to CEMREL, Inc.

ASSESSMENT PROVISIONS

Since the major goal of these books is to provide reading enjoyment for children, no formal testing is used. Parents and teachers should be able to determine whether the books appeal to their children by the reactions of the youngsters as they read and discuss the stories. The success or failure of this collection ultimately rests with the satisfaction of the customer, i.e., the children themselves.

TIME REQUIREMENTS

As with most children's literature, the time required to read a book varies from child to child. Youngsters often read their favorite books over and over again. When used in the classroom, most of these books can provide activities for one to three full-period lessons.

MATERIALS AND EQUIPMENT

No special equipment or personnel are required.

Each booklet sells for $0.35. Discounts are available for quantity orders. Price is subject to change.

ASSURANCES AND CLAIMS

Because of the nature of this product, the issues of potential harmfulness has not been explicitly investigated. No reports of harmful results have been received from previous users of this product. All of the instructional material is carefully scrutinized to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. All shortcomings of this type are eliminated upon discovery.

These stories have been used informally by teachers in the classroom, by parents in the home, and by students on an independent basis. They have also been used by teachers of mentally handicapped children. The reactions by users and children have been very favorable. No systematic evidence regarding the use of the materials has been gathered. Aside from the day-to-day feedback from students during the development of these stories, no formal pilot tests have been conducted.

FILMS OF TWELVE DEMONSTRATION CLASSES TAUGHT BY FREDERIQUE (PART OF THE COMPREHENSIVE SCHOOL MATHEMATICS PROGRAM)

A film series demonstrating a functional-relational approach to elementary school mathematics

This product consists of a film series showing Frederique Papy teaching a variety of CSMP lessons to first grade children. The films are all 16 mm, with sound and color, and run from 13 to 15 minutes. There are study guides for each film consisting of suggestions on what to look for while viewing the films, as well as some general questions for discussion after the film has been shown.

By viewing these films and participating in the discussions suggested by the accompanying study guides, elementary school educators (teachers, administrators, elementary education students and faculty at universities, etc.) can gain an awareness of a new approach to elementary school mathematics as represented by the CSMP elementary school curriculum. Since the children in the film are actually involved with the new content and pedagogy of the CSMP curriculum, the viewers can form a much better opinion of the appropriateness of this program for Kindergarten and first-grade children than they could by just scanning the instructional materials alone.

The CSMP elementary school program is based on a humanistic philosophy of education, a functional-relational approach to mathematics, and a pedagogy of situations. The functional-relational approach to mathematics assumes that mathematics has a subject matter—mathematical object—and that any effective study of mathematics consists largely in discovering relationships between these objects and then using these discoveries to solve interesting problems. Among the most important of the mathematical objects are those called *functions*, or *mappings*. The functional-relational approach can start in kindergarten since no formal language is necessary. A picture language, consisting of large and colorful arrow diagrams, is sufficient to illustrate the relational notions. The feasibility and desirability of this approach has been adequately demonstrated by the highly successful work of Madame Frederique Papy, of the Belgian Center for the Pedagogy of Mathematics. The humanistic philosophy and the functional-relational approach combine especially well with a pedagogy of situations in which the imagination of the children is captured by an easily imagined situation presented to the children.

The CSMP elementary program is a comprehensive one in which the situations presented to the children involve language and logic; sets, relations, and functions; combinatorics; algebraic structures; geometry; arithmetic calculation; and probability and statistics.

SUBJECT AREA(S)

In the chart below, each of the films is categorized in terms of the CSMP content strand and also in terms of the nonverbal languages which are employed in that particular lesson. The grade level is also indicated, but it should be noted that these films were made with the children during the summer, after they had completed the indicated grade level.

INTENDED USERS AND BENEFICIARIES

Students in elementary education classes (graduate and undergraduate) studying mathematics curricula for elementary schools, and teachers being trained to teach the CSMP elementary school program.

GOAL(S) OR PURPOSE(S)

(1) To be aware of the existence of the CSMP elementary school curriculum, and (2) to discuss some of the unique content and pedagogical methods employed in the filmed lessons.

PATTERNS OF USE

The films can be viewed in any order as they are completely independent of each other. The accompanying study guides can be used to focus attention on certain aspects of the lesson before viewing the films and to guide the discussion after watching them.

This product can be used on a supplementary basis in an inservice or preservice course on elementary school curricula.

RD 020 002

ASSESSMENT PROVISIONS

There is no formal testing.

TIME REQUIREMENTS

Each film runs approximately 15 minutes. The amount of time needed for discussion following each film will vary according to the needs and interests of the viewers.

IMPLEMENTATION PROCEDURES

No special procedures required.

Summary Cost Information

Each film can be purchased or rented. The purchase price is $100 per film and the rental price is $15 per week plus postage. Single copies of the study guide for each film can be purchased for $0.25.

Personnel Required for Product Adoption and Implementation

No special personnel required.

ASSURANCES AND CLAIMS

Because of the nature of this product, the issue of potential harmfulness has not been investigated explicitly. No reports of harmful results have been received from previous users of this product.

All of the instructional material is carefully scrutinized to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. All shortcomings of this type are eliminated upon discovery.

These films have been used by CSMP in the training of CSMP coordinators. Many of the coordinators have then elected to use these films in their local school districts during the training of beginning CSMP teachers who are teaching CSMP as part of the field test of CSMP materials, as noted in the product description titled "CSMP Elementary School Program (K-3)."

AN INTRODUCTION TO MATHEMATICS OF GRADES K TO 2 (PART OF THE COMPREHENSIVE SCHOOL MATHEMATICS PROGRAM)

A textbook for teaching elementary mathematics education at the undergraduate level of training

This is an 85-page textbook for an elementary mathematics education course at the undergraduate level. The content of this book includes all the topics of the CSMP K-2 curriculum, as well as a discussion of the pedagogical principles involved. An elementary education student who has successfully studied this course should be well prepared to teach any primary mathematics program, as well as the CSMP curriculum.

The CSMP elementary school program is based on a humanistic philosophy of education, a functional-relational approach to mathematics, and a pedagogy of situations. The functional-relational approach to mathematics assumes that mathematics has a subject matter—mathematical objects—and that any effective study of mathematics consists largely in discovering relationships between these objects and then using these discoveries to solve interesting problems. Among the most important of the mathematical objects are those called functions, or mappings. The functional-relational approach can start in kindergarten since no formal language is necessary. A picture language, consisting of large and colorful arrow diagrams, is sufficient to illustrate the relational notions. The feasibility and desirability of this approach have been adequately demonstrated by the highly successful work of Madame Frederique Papy of the Belgian Center for the Pedagogy of Mathematics. The humanistic philosophy and the functional-relational approach combine especially well with a pedagogy of situations, in which the imagination of the children is captured by an easily imagined situation presented to them.

Extensive use is made of the Papy Minicomputer, an elegantly simple and ultrainexpensive paper device which enables very young children to successfully encounter nontrivial calculations which might otherwise be far beyond their grasp. The teacher-directed K-2 curriculum is supplemented by independent study involving individualized workbooks, audiotapes, manipulatives, worksheets, and games. The lessons for 3d grade and beyond also use this multimedia approach but make increased use of the children's developing reading ability and place greater emphasis on independent study.

The CSMP elementary program is a comprehensive one in which the situations presented to the children involve language and logic; sets, relations, and functions; combinatorics; algebraic structures; geometry; arithmetic calculation; and probability and statistics.

SUBJECT AREA(S)

This book deals with the mathematical content of the CSMP primary school curriculum. Chapter titles and page lengths are:

1. The Language of Strings and Arrows (16 pages)
1.1 Dots, Strings, and Arrows
1.2 Situations Described by Dots, Strings, and Arrows
2. The Minicomputer (10 pages)
2.1 Introduction
2.2 Standard Representation
2.3 Minicomputer "Plays"
2.4 Addition in the Whole Numbers
2.5 Multiplication in the Whole Numbers
2.6 One Half of and One Third of
2.7 Subtraction in the Whole Numbers
3. From the Minicomputer to the Standard Algorithms (12 pages)
3.1 The Integers and Subtraction
3.2 Decimals
3.3 The White Square Game for Addition and Subtraction
4. Classifications and String Diagrams (6 pages)
4.1 More Examples of String Diagrams
4.2 Set Notations for String Diagrams
4.3 Conventions for String Diagrams
5. Relations and Arrow Diagrams (14 pages)
5.1 Relations
5.2 The Converse of a Relation
5.3 Composition of Relations
5.4 Functions
5.5 The Solution of an Open Sentence
6. Combinatorics and Probability (8 pages)
6.1 Counting Problems
6.2 Tree Diagrams
6.3 Early Experiences in Probability
6.4 Probability
7. Geometry (6 pages)
7.1 Taxi-Distance

7.2 Measurement and Incidence Geometry
8. Pedagogical Suggestions (8 pages)
8.1 The Spiral Development
8.2 Collective Teaching
8.3 The Lesson Plan Format
8.4 The Language of Strings
8.5 The Language of Arrows
8.6 The Language of the Minicomputer
8.7 Combinatorics, Probability
8.8 Geometry

INTENDED USERS AND BENEFICIARIES

Students in elementary mathematics education classes, elementary school teachers taking inservice courses, and elementary school teachers and supervisors being trained to teach the CSMP elementary school program are the intended users.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To learn the mathematical content of the CSMP primary school curriculum, (2) to be engaged in a pedagogy of situations, (3) to be prepared to teach any primary school mathematics program as well as the CSMP curriculum, and (4) to be aware of the existence of the CSMP elementary school program and the pedagogical principles upon which it is based.

PATTERNS OF USE

This book can serve as either a basic or supplementary text of a standard elementary mathematics education course. As such, the instructor is completely free to develop individual patterns of usage. To obtain maximum benefit from such a course, the developers recommend that the same pedagogical principles that underlie the CSMP curriculum for children be employed in the teaching of this course to adults. Problem sets and exercises are spread throughout the book, and a separately bound answer key is included with each copy of the text. The answer keys can be withheld from the students at the discretion of the instructor.

This book can also be used on a supplementary basis in an inservice or preservice course on elementary school curriculums.

ASSESSMENT PROVISIONS

There is no formal testing program. Presumably, student evaluation is an ongoing part of the instructor's activities. It is recommended that the instructor use the exercises and problem sets in the book as part of a continual assessment procedure.

TIME REQUIREMENTS

About 30 hours of instructional time are needed to cover adequately the contents of this book. This can be provided by the usual one-quarter elementary mathematics education course meeting 3 hours per week or in a more concentrated workshop format.

IMPLEMENTATION PROCEDURES

No special procedures are required.

Summary Cost Information

This book (including the separately bound answer key) costs $2.25 per copy. Each student needs one copy of the book which probably will not be reusable since it is printed on newsprint paper and has a softback cover.

Personnel Required for Product Adoption and Implementation

Instructors of elementary mathematics education courses should be able to teach this course without any special training.

ASSURANCES AND CLAIMS

Because of the nature of this product, the issue of potential harmfulness has not been explicitly investigated. No reports of harmful results have been received from previous users of this product.

All of the instructional material is carefully scrutinized to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. All shortcomings of this type are eliminated upon discovery.

This text has been used by CSMP in training CSMP coordinators, who in turn have used it in their local school districts as the basic text in the training of beginning CSMP teachers. That it has been used successfully in this regard is attested to by the success of these teachers in the field trial of the CSMP elementary program. As noted in the product description, titled *CSMP Elementary School Program (K-3)*, kindergarten and 1st-grade classes in 2 school districts began using CSMP materials in 1973-74. The next year, the number of classes from these same school districts increased to 448.

CSMP ELEMENTARY SCHOOL PROGRAM (K-3) (PART OF THE COMPREHENSIVE SCHOOL MATHEMATICS PROGRAM)

A program providing a complete mathematics curriculum for students in grades K to 3

The portion of the *CSMP Elementary School Program* described here provides a complete mathematics curriculum for all students in grades K to 3. Included are lesson plans for teachers, worksheets and workbooks for students, manipulatives, storybooks, supplementary materials for slow learners, and teacher training materials (manual for teacher trainers, textbook for teachers, and demonstration films).

The goals for the total K to 6 program include a development of the standard number systems (natural numbers, integers, rational numbers, decimals, and real numbers) and their operations interwoven with a two-pronged development of geometry. On the one hand, a rich variety of experiences in combinatorial and metric geometry are present throughout the program while, on the other hand, a carefully developed sequence of activities in affine (parallelogram) geometry is presented which highlights the geometrical interpretations of the number systems on the line, provides deep insights into the geometry of the plane, and eventually, the linkages between the number systems and the Euclidean plane. On an equal footing with the above, the CSMP K to 3 curriculum includes a strong component of probability, statistics, and combinatorics. Computational skills are not slighted. Students using the program can be expected to demonstrate proficiency in the skills at least as high as those taking a more traditional program.

The content uses the basic unifying mathematical ideas of set, function, and relation to provide the mathematical framework in which the content is developed. Powerful pedagogical devices are exploited, providing several nonverbal languages which render these underlying ideas accessible to very young (kindergarten and 1st grade) children. Through these languages, the children are able to apply mathematical ideas effectively and creatively to explore the content directly without wading through cumbersome, sterile terminology and notation.

The content is learned in an atmosphere of applications, from simple story situations in the early grades to challenging applications to nontrivial simulations of real world problems in the upper grades. The emphasis is at all times on a two-level approach to learning: Understanding the content itself and its applications, as well as understanding the techniques and processes of learning the content. It is the latter form of knowledge which gives the students the power to apply the former.

The program is based on a firm conviction that mathematics is a unified whole and should be learned as such. One of the results of this is the use of the spiral approach. CSMP content is sequenced in spiral form so that each student is brought into contact with each area of content continuously throughout the program. This approach consciously precludes atomizing the content and mastering each bit before continuing to the next. Rather, each student spirals through repeated exposures to the content, building interlocking experiences of ever increasing sophistication.

Another conviction is that no single method of classroom management suffices to meet the needs of every student. Hence, the program is constructed to allow numerous opportunities for whole class participation, small group participation, and independent individual study.

Particularly grades K to 1, and to a somewhat lesser extent in grades 2 to 3, while students are still struggling to become proficient in reading and writing their own language, the CSMP program is teacher directed—though not teacher dominated. The K to 1 and 2 to 3 materials are constructed to maximize teacher-student and student-student interaction. The students immediately begin to investigate mathematical concepts in concrete situations that are appealing and meaningful to them.

Individualization, at this level, is achieved through graded series of workbooks integrated into the basic sequence of lessons. Due to the spiral nature of the curriculum, each student can use a workbook series for a period of from 2 to 4 weeks without losing touch with the progress of the class and at the same time work his/her way up through the series according to growing capacity.

The content is not presented as an artificial structure external to children's experience and into which they are thrust, but rather as an extension of experiences that children have encountered in their development, both in real life and in fantasy. The child is led through sequences of problem solving experiences, presented in gamelike as well as story settings. Powerful nonverbal languages enable the children immediate access to the mathematical ideas and methods necessary, not only for solving these problems, but also for continually expanding their understanding of the mathematical concepts themselves.

SUBJECT AREA(S)

Mathematics for grades K to 3 organized according to the following content strands: Numerical games and algorithms; numerical relations; the languages of strings and arrows; geometry and measurement; probability, statistics, and combinatorics.

INTENDED USERS AND BENEFICIARIES

Students of all abilities in grades K to 3.

The developers believe that, with some minor adaptation, a major segment of this K to 3 curriculum would be appropriate for mathematically slow and below-average students in grades 4 to 8, as well as intermediate level educably mentally retarded students. This belief is based on positive feedback from several recent demonstration classes of such students conducted by CSMP staff members. The regular teachers of these classes, as well as many teachers in the audience, requested immediate help in providing an adapted version of the CSMP K to 3 curriculum for their use.

GOAL(S) OR PURPOSE(S)

The underlying belief on which the *CSMP Elementary School Program* is grounded is that the basic purposes of teaching mathematics at the elementary school level are: (1) To impart some important structures of rational thought; (2) to give students the capacity to mathematize a situation and solve interesting and challenging problems; (3) to awaken and needle the students' curiosity by constantly throwing challenges at them; (4) to teach students calculation; (5) to teach students how to formulate good questions; (6) to help students develop the capacity to decide upon the validity of a result by themselves, whether it be a calucation or a mathematical argument; and (7) to make the teaching and learning of mathematics aesthetically pleasing and intellectually satisfying.

PATTERNS OF USE

The teacher's guide for the CSMP kindergarten program consists of a variety of suggested activities organized into four sections according to content (relations; numbers; logic, language, classification; and geometry). A suggested sequence of lessons shows the teacher a way of spiraling and interweaving these four sections. However, the teacher is free to choose different sequences since there is very little dependence from one section to another.

The teacher's guide for the CSMP 1st grade program contains lesson plans for 308 separate lessons, many of them lasting only 15-20 minutes. There is also a suggested sequence list which teachers are encouraged to alter according to their needs. Lessons prerequisite to other lessons are clearly indicated.

The teacher's guide for the CSMP 2d and 3d grade programs is organized into six strands (numerical games and algorithms; numerical relations; the languages of strings and arrows; geometry; probability, statistics, and combinatorics; and workbooks). There is a suggested sequence for each strand. The teachers are encouraged to use a different strand on each day of the week during the school year. The two numerical strands and workbook strand should each occur 1 day each week; the other two strands should each occur 2 weeks out of every 3. There are 15 workbook series in grade 2, and 23 in grade 3, each of which is graded at 3 different difficulty levels.

ASSESSMENT PROVISIONS

Student evaluation should be an ongoing part of the teacher's daily activities. The workbook strand can serve as an effective evaluative instrument, used on a weekly basis. The more than 200 worksheets can be used diagnostically to help with daily planning. Special suggestions and materials are provided to aid the teacher with those students who are having difficulty even with the lowest level workbooks and worksheets.

TIME REQUIREMENTS

The CSMP materials for grades 1 to 3 comprise a complete mathematics curriculum for those grades. As such, 40-45 minutes per day should be devoted to this program. At the kindergarten level between 1 and 1-1/2 hours per week should suffice to complete all the suggested activities. However, if less time than this is available, a substantial part of the program can still be completed successfully.

IMPLEMENTATION PROCEDURES

The *CSMP Elementary Program* does not require a specialist teacher. The test group for the K to 2 segment totals about 18,000 students taught by regular teachers.

The 3d grade segment will be pilot tested during 1975-76. Since not all schools have kindergartens, the K materials are not prerequisite for successful use of the 1st grade materials. While the program was designed for the more typical single-teacher classroom, it has been very successfully taught in team-teaching situations, in cross-age-grouped classrooms, and in other variations of classroom organization.

Each school district implementing the CSMP elementary school program identifies a CSMP coordinator. The coordinators are given about two weeks of intensive training at a CSMP summer workshop to acquire the mathematical and pedagogical background necessary to install the program as well as to learn implementation and evaluation procedures. Upon returning to their school systems, the coordinators then conduct preschool workshops for all teachers who will be using the CSMP curriculum in their classrooms for the first time during the coming year. Optimally, the coordinator-led workshops provide a minimum of 8 hours of instruction for kindergarten teachers, 16 hours for 1st grade teachers and 24 hours for 2d and 3d grade teachers. The coordinator should also continue to support teachers during the year through inservice workshops, observation of classes, and general troubleshooting activities.

The experience of the developers, so far, has shown that the summer teacher training is needed, that there does have to be careful orientation of coordinators to the materials, and that followup visitations to teachers and workshops by the coordinators are helpful.

Field reports indicate that the nonconsumable materials last from 2 to 3 years before replacement is necessary. The field-test version of these materials was produced as cheaply as possible to keep initial costs as low as possible. It is assumed that for the eventual published version of this program, the nonconsumable materials will be more durable and of higher quality.

Summary Cost Information

Depending on the size of the class, student materials can be purchased in varying multiples of six. Each of the items needed for the program can be purchased separately. There is an approximate 10 percent saving by ordering a full classroom set of materials rather than item by item.

Personnel Required for Product Adoption and Implementation

Most regular classroom teachers can implement this curriculum, provided a coordinator is available to help with a modest amount of training and supervision. At present, workshops to train coordinators are provided each summer by CEMREL, Inc. Year-round consultation to participating school districts is also provided by CEMREL, Inc.

ASSURANCES AND CLAIMS

Assurances

Because of the nature of this product, the issue of potential harmfulness has not been explicitly investigated. No reports of harmful results have been received from previous users of this product. All of the instructional material has been carefully scrutinized to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any shortcomings of this type were eliminated upon discovery.

The program has been used successfully in many different kinds of school districts from large urban districts to small rural ones. Individual classes have encompassed wide ranges in ability, in socioeconomic status, and in racial composition. The program has also been used successfully in various classroom structures including multigrade use, team teaching, and small-group instruction.

Claims

The product has been very carefully developed. Each grade level of the program has been developed over a 3-year cycle of classroom experience beginning with the direct involvement of CSMP writers in teaching classes and culminating in the use of the materials by regular teachers under the observation, but without the assistance, of CSMP personnel. During this time, considerable information was obtained from both informal day-to-day feedback and more formal evaluation data collected by an autonomous evaluation group working with the program. During the whole of the development cycle, mathematicians and math educators assisted CSMP for extended periods of time, ranging from a month at a time to a year in residence.

As part of the summative evaluation of CSMP, reviews of program materials were conducted separately by five independent mathematicians and math educators recommended by the Mathematical Association of America as persons qualified to evaluate a mathematics curriculum. The reviewers found the content of the program to be sound, and generally liked the materials.

Users of the program have been favorably impressed. In 1973 a field trial was initiated in 138 kindergarten and 1st grade classes from 29 school districts. Questionnaire and interview data from teachers indicated that CSMP was overwhelmingly preferred to previously used mathematics programs on dimensions of student interest, achievement, and overall quality. The number of students using the CSMP program increased within the original sites, from about 4,000 in 1973 to about 13,000 in 1974.

The program is effective in promoting student learning. Controlled comparisons were made at the 1st grade level between 23 pairs of CSMP and comparison classes. On eight tests of standard 1st grade content, constructed from an analysis of five leading school texts independent of the content of CSMP, CSMP classes outperformed comparison classes on all but one test, significantly so ($p < .05$) on two of the tests. On each of three individually administered tests of cognitive skills in mathematics, CSMP classes had higher scores, though not significantly so at .05 level. On tests of specific CSMP content, administered to CSMP classes only (since much of the content was not taught to comparison classes), performance was judged at least adequate in each of the 12 content areas tested.

A SHORT COURSE IN PROBABILITY (PART OF THE COMPREHENSIVE SCHOOL MATHEMATICS PROGRAM)

A problem-oriented approach to probability for grades 7-12

A Short Course in Probability is a problem-oriented approach to discrete probability in which rather sophisticated situations are analyzed without any prerequisite theory. The course was created to introduce secondary school students (grades 7-12) to probabilistic thinking and problem solving without requiring a theoretical background in probability theory. The only prerequisite for this course is standard competence in the arithmetic of the positive rational numbers and positive decimals. The problem-oriented approach, as an initial introduction to probability theory, has several important advantages over a theoretical introduction: (1) It provides a strong motivation for a later theoretical course, (2) it provides the concrete foundations and examples needed for later abstraction, (3) it introduces students very quickly into one of the most important and dynamic areas of modern mathematical applications, (4) it permits students to work on interesting and challenging problems with a minimum background in mathematics and arithmetic, (5) it is practically void of sophisticated terminology and abstract notation which often stand as barriers between student and content, and (6) it permits a fast pace with maximum participation by students.

The course consists of a student text (115 pages) and an answer key for the teacher. Five lessons given to a group of 10 7th-graders when this course was being developed were video taped from which 2 sets of black-and-white kinescopes were made. These kinescopes are available for rental. Any one or all of the kinescopes may also be purchased in black and white or color.

SUBJECT AREA(S)

The subject area is probability and combinatoric problems involving multistage experiments and the Monte Carlo simulation method.

INTENDED USERS AND BENEFICIARIES

Students of all ability levels in grades 7-12 are the intended users and beneficiaries.

GOAL(S) OR PURPOSE(S)

The major purposes of this short course in probability is: (1) To introduce the student to probabilistic thinking in a problem-solving mode, (2) to give the student some experience in an important branch of modern applied mathematics, (3) to provide a solid concrete background for a later theoretical study of probability theory, and (4) to provide something totally different from the usual secondary school mathematics program which can be used on a supplementary basis for a short period of time to arouse the students' interest and curiosity.

PATTERNS OF USE

This is a supplementary unit of instruction in mathematics which can be taught any time from the 7th to 12th grades, depending on the interest and numerical ability of the class. The kinescopes of five of the lessons can be shown to the class at the option of the teacher. If shown, the teacher can use the film as an instructional lesson itself by stopping it from time to time to have students answer the questions asked of the film class, or as a review lesson (i.e., showing the film after having first taught the lesson). In either case, by viewing the films the students will have the opportunity to observe one of the true master teachers of mathematics in the world, Professor Arthur Engel of West Germany.

ASSESSMENT PROVISIONS

A test for this course is available. The teacher should also use the exercises and problem sets worked on by the students for assessment purposes.

TIME REQUIREMENTS

With average and above-average students, this course should be completed within 15 class periods, each lasting 50-60 minutes. For slower students, it would be preferable to delay the teaching of this course until senior high school. For such students an additional five class periods would be beneficial.

IMPLEMENTATION PROCEDURES

Once a teacher or school district has made the decision to use this course, the only major procedural question is at which grade level to teach it. The course was developed with a very bright group of 10 students during the summer between their 7th and 8th year in school. Since that time the course has been taught successfully to well-motivated and verbally capable junior high school students, as well as to average and poorly achieving students at various high school grade levels.

The only other decision to be made is whether to teach the course with or without the kinescopes. These five films are completely optional; all problems solved in the films are completely solved in the student's text.

Summary Cost Information

The cost for this course is $5 per student and $0.65 per teacher. Each of the five kinescopes (45 minutes running time for each) is available for rental ($10 per film per week plus postage) or purchase ($155 per film, black-and-white—$300 per film, color).

Personnel Required for Product Adoption and Implementation

Regular secondary school mathematics teachers can teach this course with no additional training.

ASSURANCES AND CLAIMS

Because of the nature of this product, the issue of potential harmfulness has not been explicitly investigated. No reports of harmful results have been received from previous users of this product.

All of the instructional material is carefully scrutinized to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. All shortcomings of this type are eliminated upon discovery.

The product is intended as a supplementary unit of instruction, to be taught any time from the 7th to the 12th grade at the discretion of the teacher and requiring only about 3 weeks of instruction. It has not been widely tested. Two 7th- and two 11th-grade classes of above-average ability have successfully completed the course with untrained teachers and without assistance from CSMP. In addition, CSMP has completed some internal trials of this course. Data from tests administered to students upon completion of the course revealed that students were generally successful with definitional and straightforward applications of basic probabilistic concepts of dependent and independent events, permutations and combinations, and the use of tree diagrams. It should be noted that this information is based on very limited evidence, and this evidence also indicates that a longer period of instruction may be necessary before students, on their own, can successfully solve many of the more complex problems occurring in the text. Two reports on these trials are available:

(1) Test Data from Pilot Trial of "A Short Course In Probability," Martin Herbert, CEMREL Evaluation (mimeograph).

(2) Test Data from Second Pilot Trial of "A Short Course In Probability," Martin Herbert, CEMREL Evaluation (mimeograph).

ELEMENTS OF MATHEMATICS (EM) PROGRAM (PART OF THE COMPREHENSIVE SCHOOL MATHEMATICS PROGRAM)

*A program to bring modern mathematics to highly verbal,
well-motivated students in grades 7-12*

The *Elements of Mathematics* (EM) is a 7th- through 12th-grade program designed to bring good, modern mathematics to highly verbal, well-motivated students who are in the upper 10-15 percent of the school population. The program consists of a series of 16 textbooks, supplementary materials (such as films that deal with some of the content of a book 0 chapter on probability), and various support materials (such as quizzes and answer keys).

The materials are intended to be presented in a variety of ways. When studying book 0, the class is led by a teacher; each student studies individually in books 1-3; and in books 4-12, a seminar or problem-session approach is often most effective. The roles of the teacher and students vary accordingly. In book 0, the teacher directs the students' work; the relationship is close to the classical one between teacher and pupil, although there is heavy emphasis on experimentation on the part of the students. In books 1-3, the teacher becomes a resource person who answers questions when difficulties are experienced in the individual study of the materials. In books 4-12, the teacher is a discussion group leader who orchestrates the students' exposition of solutions to problems posed in the text. The student studies individually and yet prepares solutions to problems for presentation to the rest of the group.

SUBJECT AREA(S)

The *Elements of Mathematics Program* deals with mathematics topics normally covered in junior high school to topics usually not encountered before the advanced undergraduate level. There is a careful development of high school algebra, the theory of relations and functions, the standard number systems, elementary number theory, the calculus of one variable, affine and projective geometry, linear algebra, group and ring theory, finite probability theory, and measure theory, as well as an introduction to computer science.

INTENDED USERS AND BENEFICIARIES

Intended users are highly motivated students with high verbal ability in grades 7-12, approximately the top 10-15 percent of the school population.

Although the program, as a whole, was designed as complete for the junior high school-senior high school-age range, book 0 of the program has been used strictly for junior high school. In this case, it was found that the selection of students need not be so demanding.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To familiarize the student with some of the basic ideas, techniques, language, and notations of mathematics; (2) to help the student develop the ability to read and to write mathematical arguments; (3) to familiarize the student with the axiomatic method; (4) to help the student develop an appreciation of what this method does and does not provide; (5) to familiarize the student with the process of abstraction and the role this plays in the development of a mathematical theory; and (6) to provide experience with nontrivial, relevant applications of mathematics—in particular, to familiarize the student with the notion of model building and to provide opportunities of developing mathematical models of "real" situations.

PATTERNS OF USE

The EM program begins at the 7th grade; and for the first 2 or 3 years of the program, students study books 0 and A simultaneously with books 1-3. Thereafter, students study such books as 4, 5, and 6. All students who study the EM program for 6 years should finish book 6, but many of the abler students will be able to finish several of books 7-12. While books 1-6 have to be studied in linear order, books 7-12 offer several alternative sequencings and programs. The only interdependency that should be respected is that books 7 and 11 are prerequisites for book 12. Books B and C are supplementary books that can be dipped into as the student progresses through the series.

Books 0-3 can be used as a junior high school EM program if continuation at the high school level is impractical or cannot be arranged. Book 0, chapters 1-9, could comprise a 7th-grade or 7th-8th-grade honors program for the upper 25 percent of the population.

ASSESSMENT PROVISIONS

Quizzes are available which may be used to gage the student's level of understanding at various stages in each book. It is also recommended that daily homework exercises and problem sets be collected regularly and used as part of the general overall assessment of EM students.

TIME REQUIREMENTS

In order to complete the full program (books 0-12), the student will need to spend one period (50-60 minutes) per day on the EM program throughout junior high school (grades 7-9) and two periods per day throughout senior high school (grades 10-12). The alternative uses described above require 50-60 minutes per day in order to complete the corresponding amount of material.

IMPLEMENTATION PROCEDURES

The students should be carefully selected. It is suggested that this selection be carried out on the basis of standardized tests, particularly of reading ability, and a strong teacher recommendation, although it is left up to the individual school what relative weights are given to the data that are gathered in this way.

The teacher should have a strong mathematics background. In order for the teacher to be able to handle the full range of the program, this background should probably include a master's degree in mathematics. The teacher should attend a workshop in the summer prior to first teaching the 7th-grade program, and workshop attendance during each of the succeeding summers will insure continuation through the end of the 9th grade (approximately the end of book 3). Alternatively, this initial training through the 9th-grade program may be obtained through an academic-year program. Training for teaching beyond the 9th-grade level (books 4-12) is handled on an individual basis by CEMREL, Inc.

There should be a commitment on the part of the school system to a program of this nature for gifted students. This commitment should be evidenced in: (1) A willingness to allow the students involved to stay together as a group and to provide opportunity in the later grades for the students desiring to complete the entire program to spend twice the usual amount of time on mathematics with a corresponding increase in credits; (2) a willingness to keep class size to manageable levels (i.e., a maximum of 30 students in grades 7-8, 25 students in grades 9-10, and 20 students in grades 11-12); and (3) a willingness to provide some release time for upper level EM teachers to prepare properly for this very demanding type of teaching.

Every effort should be made at the outset to guarantee a smooth continuation of the EM program as students move from junior to senior high school, especially when a change of building is involved.

Summary Cost Information

The average cost per student has been $6 per year when the students kept the books as their own (as the developer hopes they can). Prices are subject to change.

ASSURANCES AND CLAIMS

No reports of harmfulness regarding the use of this program have been received from previous users. While the complete program has not been available long enough for students to have completed the series, students who have been through portions of the program or who have used prototype materials have encountered no difficulties in transferring back to regular programs. Many who completed extensive amounts of the prototype materials have received advance college credit in mathematics, and some have gone directly to graduate-level courses. Others who have been in the program from 7th through 10th grades have been able to go directly to college-level courses. This information has not been systematically collected, however, and no exact figures are available.

All of the instructional material is carefully scrutinized to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. All shortcomings of this type are eliminated upon discovery.

The EM series has been carefully developed. The broad structure of the program was developed in many meetings of Comprehensive School Mathematics Program (CSMP) staff associates at which various viewpoints of mathematics were discussed. More detailed structuring was the responsibility of the writing teams, which include the program director, staff associates, and writing staff.

The initial organization, the exposition, and the exercises in any one book were usually the work of one to three writers. The initial manuscript was read by members of the writing group who commented on it in detail and provided additional problems. The manuscript was revised as a result of these comments. The first trial of the material was conducted with a group of students from the local (Carbondale, Illinois) secondary school under the guidance of an experienced teacher who was generally a member of the writing team.

As a result of the initial trial, the manuscript was further revised and put into book form for a second trial with local secondary students. This trial resulted in further revisions, particularly of exercise and illustrative materials, resulting in a book suitable for pilot testing. Local students then continued to use the books, and pilot classes at distant sites began using materials in "hands-off" trials. The senior author and program director were responsible for consistency of language and notation used in the series, for articulation between the books, and for decisions regarding extent and types of revision. A general editor supervised the book production.

Where the guidelines recommended in "Implementation Procedures" of this document have been followed, the program has been successfully used as intended. Portions of the intuitive background series, book 0, have also been successfully used in Baltimore County, Maryland, by junior high school students. In that feasibility study, 5 CSMP 7th-grade classes of above-average ability (approximately the upper 25 percent) were compared with a total of 10 classes of similar ability studying 3 other modern mathematics textbooks. CSMP students scored higher than those of the other curriculums (at or near the .05 level of significance) on a series of nine tests from the National Longitudinal Study of Mathematics Achievement battery and had much higher scores on a series of six tests of EM content.

Since no students have had the chance to complete the entire EM program, no empirical data-based claims can yet be made about effectiveness of the total 7-12 program in promoting student learning. Preliminary evidence regarding student achievement has been based on relatively small numbers of classes studying the first few books in the series. This preliminary evidence indicates that EM students do about as well as non-EM students of the same ability on tests of traditional skills and concepts and do far better on tests specific to the content of EM.

MATHEMATICS ACTIVITY PACKAGE I (MAP I) (MAY BE USED WITH MAPS II AND III OF THE EXPLORING NUMBER CONCEPTS PROGRAM)

A sequential mathematics curriculum for 5- and 6-year-old English-speaking children from low-income communities

This is an individualized program of teacher-directed instruction that is designed to teach basic mathematical concepts and skills in a sequential curriculum. The product is comprised of 12 units and 60 sequential activities implemented by a system of diagnostic testing and subsequent grouping. This mathematics curriculum provides for individual continuous progress with numerous options that coincide with children's differing interests and learning styles. The product operates according to each child's individual learning capacity. It simultaneously addresses two significant learner characteristics not met in other mathematics programs: The child's need to have many planned experiences with concrete materials, or manipulatives previous to abstract mathematics and the child's need to work with instructional materials that do not require reading ability.

Through diagnostic tests, children are placed in the program at their own developmental levels rather than by chronological age. This allows the children to begin where their needs are and monitors their progress at their own rate of speed. Emphasis is placed on having small groups composed of children at the same level of development. These children are taught in a special area of the classroom called the discovery corner. The discovery corner provides the following situations: the teacher interacts individually with each student during individualized testing, the teacher directs small-group learning activities, activites are reinforced and expanded, and opportunity is provided for unstructured experimentation and discovery by the children.

In the discovery corner, the teacher has the materials for each group. The instruction takes the children through three basic steps: (1) Giving the children a review and knowledge background through demonstration and explanation, (2) asking questions and giving guidance while providing many experiences with manipulatives for each child to experiment and apply the knowledge each has received, and (3) presenting a situation for children to demonstrate whether they have achieved the objective. The teacher records the results for each child and prescribes which activity the child will need next, either a new activity or test, or one of the expansion activities, which teach the same objective using another approach. The expansion activities present information on either a lower level or more advanced level, depending on the needs of the child. All tests are administered individually by the teacher. Thus, the role of the teacher in the MAP I product not only includes direct teaching and tutoring but also monitoring, managing (grouping and regrouping), and prescribing on a daily basis as determined by the system of diagnostic testing.

The child takes the role of the learner, experimenter, and discoverer. The child brings to school mathematics skills and concepts at a certain developmental level and from that point on is taught how to apply that knowledge to the acquired skills and concepts. Throughout *Mathematics Activity Package I* (*MAP I*), the children acquire basic mathematics concepts and understandings by manipulating concrete objects and by verbal interaction with consistent exposure to the language of mathematics. This provides a background for later comprehension of abstract mathematics.

This package incorporates a variety of instructional materials that accommodate individual interests and learning styles such as manipulatives, filmstrips, diagrams, pictures, and worksheets. Manipulatives not supplied by the product are ordinary objects which can easily be gathered in a minimum amount of time, such as pencils, crayons, spoons, facial tissues, and paper cups. Included in the product is a self-contained staff orientation package which provides all the necessary brochures, manuals, filmstrips, and cassette tapes. These training materials provide for teacher refresher courses and for training for new teachers, teacher aides, and class helpers.

RD 020 007

SUBJECT AREA(S)

This product content consists of a sequence of mathematics concepts which fall under three major topic headings: (1) Ordering, (2) sets, and (3) measurement. The resulting units of activities are designed to teach these concepts by involving the children in teacher-directed, enjoyable learning experiences.

Achievement of the carefully sequenced topic 1 activities results in the higher skills of ordering objects by color, size, and shape and gives the child a concrete basis for counting. The topic 2 sequences on sets extend the child's knowledge and application of properties; sets and subsets are identified, and their members are counted, using numbers and numerals 0 to 5. Topic 3 includes activities on measurement. The child compares and measures length, is introduced to quantity, and begins to use prediction in measurement.

INTENDED USERS AND BENEFICIARIES

The product is especially designed and tested for 5- and 6-year-old English-speakers from low-income communities where typical mathematics programs fail. Evidence is available that the product will be effective with children of differing ethnicity, sex, and income levels, in various geographical regions, if they understand English. This product was designed to be used by the regular classroom teachers, but it has also been utilized by special education and educational resource centers.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to maximize a child's learning development in mathematics skills by: (1) Meeting individual needs through a continuous progress curriculum, (2) enabling the child to acquire important basic mathematics concepts and skills before learning to read, (3) providing learning experiences that are designed to be enjoyable, (4) increasing the child's active vocabulary and communication skills, and (5) improving the child's self-concept by successful participation in challenging activities that are within the range of achievement.

PATTERNS OF USE

Mathematics Activity Package I is an individualized, continuous progress, mathematics curriculum comprised of sequential units of teacher-directed, related activities for small groups. It is a complete mathematics system; however, parts may be utilized as complementary options to existing mathematics curriculums. It can be used in a self-contained classroom situation, in open or traditional classrooms, and in graded or nongraded organizations. Because many of the product's concepts and skills fall under categories that are found in most kindergarten curriculums, it may be adapted to integrate parts of the product into a curriculum that is weak or does not have a mathematics area, or to adapt it to a curriculum that is weak in basic concepts and skills areas, such as auditory, visual, fine motor, ideas and concepts, and thinking and reasoning skills.

ASSESSMENT PROVISIONS

The product incorporates a diagnostic system using four types of individually administered tests to determine and confirm placement (both initial and continuous) and to check unit and topic mastery. The tests identify units of activities in which children need additional tutoring or other special attention. The tests are adequate to monitor the entire program, although few children will require all of them. The four types of tests include a topic inventory test, unit diagnostic instruments, unit tests, and a Topic Mastery Test. The Topic Inventory Test (total of three) is administered individually to each child to determine the child's tentative initial placement within a topic. The unit diagnostic instrument (total of 12) is administered before each unit when indicated by the topic inventory test to evaluate the accuracy of the topic inventory initial placement and to establish initial groupings. The unit test (total of 12) is administered on completion of a unit as a final evaluation of the child's achievement of unit objectives and serves as a basis for regrouping. The topic mastery test (total of three) is administered on completion of a topic to evaluate mastery of an entire topic.

The product also provides a system of recordkeeping which is vital to its effectiveness. The three elements of testing, grouping, and recordkeeping overlap and interrelate to comprise the MAP I diagnostic system.

TIME REQUIREMENTS

The teacher should allow an average of 20 minutes per activity. Since this is an individualized program using small-group sessions, the teacher should take into consideration all the characteristics of each group that might affect the length of an activity, such as the attention span of the children. Some of the activities will require longer or shorter time segments, depending upon the level of difficulty.

IMPLEMENTATION PROCEDURES

All parts of the MAP I product are self-contained and do not need any special equipment or services. The product does emphasize the need for a special mathematics area in the classroom to be used as a "Discovery Corner" by a label or sign. The essential furnishings for this special area are a chalkboard or bulletin board, a rug, and a round or curved table with chairs to accommodate at least eight children and a teacher. Other furniture items needed for this area are bookcases or small cabinets that would not only provide storage space for materials but also work as room dividers to allow for a degree of privacy.

Personnel Required for Product Adoption and Implementation

The product developer recommends that a school system installing this program designate an onsite trainer to conduct a training session for all personnel involved, such as administrators, supervisors, teachers, and aides. All materials needed to conduct a 3-hour training session are provided for the trainer in the staff orientation package.

ASSURANCES AND CLAIMS

The field test evaluation addressed the following concerns: (1) The achievement of the project pupil as compared to a similar target population, (2) the level of mastery on curriculum concepts as measured by criterion-referenced tests, (3) the extent to which project pupils demonstrate readiness for grade-1 mathematics instruction, (4) the extent to which positive self-concept is expressed, and (5) user perceptions of curriculum effectiveness and classroom management. Assessment instruments included *Test of Basic Experience Mathematics*, level K; *Self-Concept and Motivation Inventory*, kindergarten version; *Exploring Number Concepts MAP I Topic Mastery Tests*; and a user questionnaire.

During the development of the program, extensive formative feedback was collected from the children through the use of mastery tests and from the teachers through teacher checklists. Observations by the program staff were conducted on a regular basis. Another source of product revision data was based on oral conferences with the teachers. Formative pupil mastery data were analyzed for each lesson, using sex and ethnicity as analysis groups. This provided the program staff information in order to explore possible biases if they occurred in the lessons. The program staff, which was multiethnic, reviewed the materials for all possible biases as well as soliciting opinions from the teachers as they were using the materials. Where biases were identified, attempts have been made to correct the situation.

Results concerning the replicability and transportability of the materials are inconclusive at this time. However, the product is being used in classrooms at field test sites with little or no program intervention. As monitoring of the testing program has been ongoing, there is reason to believe the program is being implemented as intended.

RD 020 008

MATHEMATICS ACTIVITY PACKAGE II (MAP II) (MAY BE USED WITH MAPS I AND III OF THE EXPLORING NUMBERS CONCEPTS PROGRAM

A cassette-directed package for teaching basic mathematics skills to 1st-graders from low-income communities

Mathematics Activity Package II (MAP II) is a continuous progress mathematics curriculum designed to teach basic mathematics skills to a 1st-grade learner. The product comprises a sequential curriculum of 60 activities. Diagnostic testing is utilized throughout the product to place children at their developmental levels and to assure continuous progress at their own rates.

The basic MAP II curriculum is cassette directed; essentially this means that a child or a small group works independently in its own booklets while listening to recorded instructions. This approach allows a greater degree of individualization and requires a child to work more independently than in teacher-directed, small-group activity sequences. MAP II is designed to move the child toward more abstract mathematics while continuing to provide meaningful experience involving the use of various concrete objects. Another characteristic of this product is that it does not require reading ability. Therefore, children may progress at their own rates without any outside pressures to add extra burdens upon them, such as: Having to read instructions, having to work through activities that do not relate to their environment or experiential background, or having to be left behind by the others or wait for the others to understand what they have already grasped.

MAP II also includes mathematics games for small groups of children. These games may be used to introduce or reinforce the concepts taught by the cassette-directed basic program and allow children to apply their skills and knowledge in an enjoyable way. Songs, both original compositions and traditional melodies, are also included as enjoyable reinforcement experiences. For added interest and motivation, the tapes and booklets follow "make-believe" themes featuring several fantasy characters.

The package includes a student orientation unit which trains the child to operate the equipment and teaches the skills necessary for following recorded directions. There is a workable system for keeping records on each child's progress. A resource bibliography lists mathematics-related children's literature and professional publications for the teacher, in addition to an annotated list of commercial games and manipulatives.

MAP II also includes a self-contained staff orientation package which includes all the materials needed for conducting a 3-hour teacher orientation session. This training package provides refresher courses for teachers and for training new teachers, teacher aides, and class helpers.

None of the typical mathematics programs that were used in comparison studies have really addressed the unique learner characteristics of children with language difficulties in the developmental levels usually associated with 5- and 6-year-olds. This is especially true for that child from an environment different from the typical middle-class child. The two major learner characteristics not addressed by other programs are the child's need to have planned experiences with concrete manipulations and the child's need to be able to work with instructional materials that do not require reading. The product's reliance on a multimedia approach meets a need for children who cannot read. Prediagnostic testing places the child in the program at a developmental level rather than a chronological-age level.

The teacher as classroom or mathematics center manager provides a working environment with all the necessary materials organized for continuous use. Before assigning any tests or activities, the teacher should know exactly what the child is expected to do in the activity and examine the answer key in order to score the booklet quickly and accurately. These preliminary steps are especially important because of the teacher monitoring inherent in the cassette-booklet format. As monitor, the teacher monitors progress of each child through periodic skill checks and tests and records and prescribes on a daily basis.

Tutoring and managing may be done by a teaching assistant or by a peer tutor when the situation seems appropriate.

The child is stationed at an individual unit or at group listening units. The learner independently works with manipulatives and marks a booklet according to instructions recorded on tape. The child is responsible for having the materials needed for working through a booklet and is responsible for getting the teacher to check periodically what has been accomplished. All instructions are provided to help the child carry out the responsibilities.

SUBJECT AREA(S)

MAP II consists of 60 sequential cassette-directed mathematics activities which fall under 3 major topic headings: (1) Numbers and numerals, (2) addition/subtraction, and (3) measurement. The actual content sequence is preceded by the student orientation unit, which includes "Learning to Listen" activities designed to teach the children to use the equipment and "Getting Started" activities which teach the children to respond to the directions they hear on the tapes.

INTENDED USERS AND BENEFICIARIES

MAP II is especially designed for English-speaking 5- and 6-year-olds from low-economic communities where typical mathematics programs fail. Research has also indicated productive use at 2d-grade levels and slightly beyond. It is also believed to be effective with children of all races, ethnicity, sex, and income levels in various geographical regions. It is intended for children who need a good foundation in basic mathematics skills and concepts; MAP II adequately prepares children who will go into a traditional 2d- or 3d-grade mathematics program.

The primary users of this product are the teachers and instructional aides who work with English-speaking, multiethnic, heterogeneous 1st-grade children from low-income communities. Other intended users are teachers in departmentalized grade levels, curriculum specialists, college or university professors who are working with individualized instruction in their educational courses, and school administrators.

GOAL(S) OR PURPOSE(S)

The basic goals of this product are: (1) To maximize the child's capacity to develop mathematics skill through a visual-aural mode not common to the traditional textbook approach, (2) to maintain individual continuous progress with numerous options that coincide with children's differing interests and learning styles, and (3) to allow a child to work with instructional materials without having to read.

PATTERNS OF USE

Each of the three topics and the units within them consist of a series of cassette tapes and student booklets which comprise the basic curriculum and the pretests and posttests for each unit. The children must first have mastered all the student orientation unit objectives and become totally familiar with MAP II cassette and booklet format before they move through the appropriate topics and units. After initial individual inventory testing, the teacher will know which tape and booklet to assign to each child.

The booklets are designed to include several pages which teach a specific concept or skill, followed by an evaluation page or skill check. Supplementary pages and a second skill check follow the basic activity. These pages reinforce or reteach the activity concept. They are assigned only to those children who do not meet the 80 percent criterion on the first skill check. Teachers using MAP II have found the centrally located mathematics room or learning center to be the most workable and convenient arrangement. In a learning center where equipment from all participating classrooms is "pooled," several groups can be working at group listening centers. In a self-contained classroom, at least one group can work together; perhaps more than one group can "take turns." After the children are thoroughly trained in the use of the equipment and in following directions, the group listening center arrangment can operate very effectively.

ASSESSMENT PROVISIONS

The diagnostic system of the *Exploring Number Concepts MAP II* curriculum is a vital part of the material. The tests are adequate to monitor the entire program, although few children will require all of them. The tests determine and confirm initial placement and check unit and topic mastery. They identify units of activities which may be bypassed by individual children and also identify concepts and skills on which children need tutoring or other special attention.

TIME REQUIREMENTS

The product estimates 30-minute time allotments for each activity or for 1 day of a 2- or more-day activity. This amount of time does not allow for short tutoring sessions if the teacher sees that a child is having difficulty. In relation to time, the teacher should also take into consideration that a child might have to wait for the teacher's assistance if quite a few other learners need assistance at the same time.

IMPLEMENTATION PROCEDURES

MAP II was initially designed to be used in a centralized learner or mathematics center within a school. The center should be the size of a regular classroom in order to accommodate an entire classroom of children at one time. Therefore, all the teachers who are participating in this program can "pool" their playback units and materials, and in this way the teachers can leave the equipment and materials out on shelves if the security in their school is adequate to allow this.

MAP II with 25 children requires a minimum of five individual playback units with earphones. Whatever manufacturer the school selects, the units should be equipped with both "reverse" and "fast-forward" controls, in addition to "on," "off," and "volume." Under no circumstances should the children use fully equipped tape recorders which have the capacity to record and erase. Also, a minimum of one group listening center for eight children with earphones to be connected to an individual playback unit is required.

If MAP II is implemented in a self-contained classroom, a specific area for mathematics activities should be designated so that the children may be monitored as they use the tapes and playback units. If the teacher has access to only one or two playback units everyday, then the instructor may schedule mathematics periods throughout the day. The children in the mathematics area can work independently while the teacher is carrying on regular routines with the rest of the class.

Personnel Required for Product Adoption and Implementation

The product developer recommends that a school system installing this product designate an onsite trainer to conduct a training session for all personnel involved, such as administrators, supervisors, head teachers, teachers, and aides. All materials needed to conduct a 3-hour training session are provided for the trainer in the staff orientation package.

ASSURANCES AND CLAIMS

The exploring number concepts *Mathematics Activity Package II* underwent pilot testing during the 1973-74 school year, with a sample consisting of 167 project pupils and 90 comparison pupils. Extensive formative feedback was collected for revision purposes. These data included pupil performance data, teacher checklists, program classroom observations, and oral conferences with the teachers. A user satisfaction questionnaire was also administered to determine user perceptions of the program. Variables addressed in these assessment instruments were pupil mastery of concepts taught, pupil interest, classroom management, and quality of the lessons.

The *Test of Basic Experiences Mathematics*, Level I, was the norm-referenced instrument selected because of the similarity of its contents to the concepts taught in the curriculum. Both the project group and the comparison group made significant gains from pretesting to posttesting. Therefore, it can be concluded that exposure to the exploring number concepts MAP III concepts materials did not impede pupil performance in mathematics concepts.

The product staff reviewed the materials for possible biases as well as for soliciting opinions of teachers as they were using the materials. Whenever biases were identified, attempts have been made to correct the situation. Formative pupil performance data were analyzed for each lesson using sex and ethnicity as analysis groups. This provided the project staff additional information in order to explore possible biases if they occurred.

This product will not be in field test stage until after November 1975; therefore, no assurances of replicability or transportability can be made.

MATERIALS AND EQUIPMENT

RD 020 009

MATHEMATICS GAMES PACKAGE (MAY BE USED WITH EXPLORING NUMBERS CONCEPTS, MAPS II AND III)

Mathematical games to incorporate skills and concepts found in primary level mathematics programs

The *Mathematics Games Package* consists of 13 mathematics games; it contains all the materials to play each game and an instruction manual which includes the specific concepts and skills it relates to, number of players, procedures, rules, and, for some games, variations.

This package was designed as an instructional approach since many children find it easier to comprehend concepts and to demonstrate their knowledge in a game situation than in a traditional paper-and-pencil form. The product is designed to create a relaxed atmosphere and for informal learning styles while also encouraging sportsmanship, motor coordination, independent thinking, strategy, problem solving, and cooperation.

When a game is being introduced for the first time, the teacher assumes the role of instructor. Before a game is introduced, the teacher and aide (if one is available) role play the game and become thoroughly familiar with all aspects of it, the concepts and skills the game relates to, all the instructions, the game board, and the playing pieces. Then the teacher introduces and explains step-by-step the game to children who are "ready" for these concepts and skills. All games are taught in small-group sessions. After the children know how to play the game, the teacher or aide may teach a variation of the game.

After the children have been introduced properly to a game, they may play it without any teacher supervision.

SUBJECT AREA(S)

Each game incorporates and reinforces skills and concepts found in most typical mathematics programs on the primary level. Such skills and concepts include counting, seriation, numeration, constructing addition and subtraction number sentences, and skills relating to fractions, linear measurement, volume, weight, time, and metric measurement.

INTENDED USERS AND BENEFICIARIES

The *Mathematics Games Package* is designed for children in the primary grade levels who need a different instructional approach to achieve in skill areas which may be causing difficulty in a traditional mathematics program. Anyone interested in games as an instructional approach or in addressing informal learning styles will benefit by this games package.

GOAL(S) OR PURPOSE(S)

These games have been devised to provide activities for the children to engage in while learning various mathematics concepts. They are designed to emphasize individual achievement and skill and allow for cowinners. In each game there is an absolute standard of winning which will allow for more than one winner.

PATTERNS OF USE

This product is a self-contained package of game activities that may be used as an instructional approach to reinforce certain mathematics skills and concepts in an ongoing mathematics curriculum.

ASSESSMENT PROVISIONS

No assessment instruments are included with this product.

TIME REQUIREMENTS

The length of each game depends greatly upon the use of the game and the children playing it. An average of 15 minutes for actual playing time would usually be enough time for most of the games in this package.

IMPLEMENTATION PROCEDURES

The developer recommends that the game be taught in small groups by the teacher for the first time. An aide or child who knows the game thoroughly may also teach the game. The value of playing the game is lessened if the children have not received instructions on how to play it and if they have not been introduced to the skills and concepts the game reinforces.

ASSURANCES AND CLAIMS

The games package has been used by approximately 330 multiethnic pupils in 13 classrooms where the teachers were also multiethnic. Two data-gathering techniques were used—program observations in the classroom and teacher-evaluation checklists for each game. The data collected indicated that the children enjoyed using the games, and most teachers felt the children were better prepared for their mathematics lessons. No indications of bias were reported from either of the data-gathering techniques utilized. The games are packaged in an attractive box with instructions for use. The data collected showed no indications that the games caused any classroom management problems, but did indicate that they were easily stored and also easily assembled and prepared for storage. Therefore, assurances of replicability and transportability are evident.

RD 020 010

MATHEMATICS MUSIC PACKAGE

A multimedia package which reinforces primary mathematics instruction by associating mathematics concepts to songs

The *Mathematics Music Package* is designed as a self-contained musical activity package that will provide enrichment and reinforcement activities to primary level mathematics instruction. This package includes original compositions and traditional melodies recorded on two cassette tapes; it also has an instructional manual which includes general guidelines for classroom use of the songs and lyrics, and chord guides for all the songs. There are specific suggestions for children's active participation, such as hand motions or marching.

Songs were selected on the basis of their relevance to the concepts taught in most primary mathematics curriculums. The mathematics concepts or skills appropriate to each song are stated in the instructional manual.

The music materials were designed for maximum flexibility. Once children know the songs and motions, they can listen individually or in a small group without the teacher's supervision. Testing in classrooms indicates that music can be an excellent teaching tool. Many of the recommended songs associate mathematics concepts with situations that are familiar to children. This combination helps the students discover that mathematics is useful and interesting beyond the school environment. Mathematics facts which require memorization are often learned more easily when set to music. The enthusiasm most children show for singing and listening to music suggests that this package can be used to help promote a positive attitude toward mathematics.

SUBJECT AREA(S)

Mathematics Music Package incorporates many basic mathematics concepts and skills that relate to: Seriation; counting; reinforcement of the concept of properties such as shape, color, size, and number; adding, subtracting; multiplication; money; and measurement.

INTENDED USERS AND BENEFICIARIES

The music package is designed for all English-speaking, primary level children. It may also be used by classroom teachers, music teachers, aides, college or university professors, and educational administrators who wish to incorporate enrichment as well as reinforcement activities in teaching mathematical skills and concepts in their curriculums.

GOAL(S) OR PURPOSE(S)

The main purpose of this mathematics music package is to reinforce concepts and skills through enjoyable musical activities.

PATTERNS OF USE

The songs included in this package may be presented or taught in any order, although each song will be more effective if used in the order in which related mathematics skills are taught. Children who have already been taught the songs may then listen to them or become actively involved independently or in small-group settings without teacher intervention. The use of headsets connected to playback units provides enjoyment and reinforcement to an individual or a small group without disturbing the rest of the class.

TIME REQUIREMENTS

The product is designed to be flexible; therefore, there are no strict time limits related to the teaching of the songs.

IMPLEMENTATION PROCEDURES

Since the package is self-contained, there is no need for any specialized personnel or facilities. The teacher or aide will need a cassette playback unit in order to play the tapes included in this package; headsets and a good listening unit are needed if groups of children listen independently.

ASSURANCES AND CLAIMS

The *Mathematics Music Package* was used with multicultural pupils and teachers. No evidence of bias was mentioned when the program staff solicited teacher reactions. The music package contains music from a variety of cultures, and the responses from the children were extremely positive. The package contains two tapes and a songbook with words and music for both piano and guitar. Due to the nature of the product, no problems are expected with transportability or replicability.

RD 020 010

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Mathematics Music Package including cassette tape of recorded songs and instructional manual	1 package	To be determined	Reusable	

Note: Because this is a self-contained musical activity package, there will be need of only a classroom teacher to introduce the songs to the children. Musical talent and other qualifications are not necessary for success.

FUNCTIONS PUZZLES COMPUTER ASSISTED INSTRUCTION PROGRAM (FUNPUZ)

A program designed to give students in grades 2-12 experience in solving problems

The *Functions Puzzles Computer Assisted Instruction Program* (FUNPUZ) is designed to give students experience solving problems and to teach certain rules for manipulating text. The range of problem difficulty spans grades 2 through 12. Thousands of unique problems, encompassing approximately 400 different principles, are available. Problems are sequenced into 50 levels of difficulty, each representing several principles.

The FUNPUZ program provides the kind of responsive environment that is impossible without a computer, and represents a way in which computers can contribute to changing the content traditionally taught in the schools. The emphasis in the program is on problem solving and thinking skills such as stating the problem clearly, gathering data, using feedback, creating and testing hypotheses, and knowing when to stop working on a problem.

Every problem is based on a single functional rule that the student must infer from a set of examples. To help infer the rule, the student collects more data by inputting values which are transformed according to the rule and displayed. When a hypothesis about the rule has been developed, it can be tested by applying it to program-generated values. The program checks the result and provides feedback to the student. Cycles of self-testing and data collection continue until the student asks to change to a new puzzle. Between problems, the student is given feedback on performance and is asked to choose a new level for the next problem. Problems are provided until the student stops for the day.

The rules that form the basis for the problem include: Extracting, inserting or deleting characters from a string; reordering characters in a string; adding, subtracting, multiplying, or dividing numbers; counting characters; determining if a symbol does or does not satisfy a condition. These basic principles are combined to create more complex principles.

SUBJECT AREA(S)

The program teaches problem solving skills such as stating problems, gathering data, using feedback, and testing hypotheses. The content includes rules and problems from mathematics and English.

INTENDED USERS AND BENEFICIARIES

Students in grades 2 through 12 will find problems of appropriate difficulty in the program.

GOAL(S) OR PURPOSE(S)

The FUNPUZ program provides experiences which enable students (1) to use feedback more effectively, (2) to test hypotheses, (3) to gather data when needed, and (4) to enjoy solving problems.

PATTERNS OF USE

The program can be used without restriction. Students choose their own level of difficulty within the program and may enter at any time.

ASSESSMENT PROVISIONS

Placement within the program is unnecessary since students choose and adjust their own level of difficulty continuously.

Progress within the program is reported to teacher and student after each session. A progress graph is printed, separating the most current work from the earlier work.

TIME REQUIREMENTS

No restrictions are placed on the amount of time that students work. It is recommended that students spend about 5 hours on the program during the course of a school semester but considerably different patterns of use could be equally beneficial

IMPLEMENTATION PROCEDURES

To use the FUNPUZ program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype or teletype-compatible cathode ray tube (CRT) and is enhanced if run on a CRT, capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300.

Approximately 3 months of expert programing would be required to adapt the program to most other time-sharing systems.

Teacher orientation requires approximately 2 hours, and each student needs half an hour on the terminal to learn the necessary management skills for accessing the program and performance within the program. Students work individually on the program. Any school organization that allows students to work on different objectives at their own pace within the same classroom can support work on the program.

ASSURANCES AND CLAIMS

In the 2 years that FUNPUZ was pilot tested in a single school, no report of harm to any student was received. The program contains no materials capable of showing racial, ethnic, or social bias.

The FUNPUZ program has never been used outside of the producer's direct control, so no assurance of replicability or transportability is possible at this time. At the field-test site, the program operates with minimal producer intervention, so that it is likely that the program will operate successfully at other sites.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
FUNPUZ computer program	1 per computer system	Cost of duplication	Reusable	

Note: Use of FUNPUZ requires a computer system as described under "Implementation Procedures." Teacher orientation is available from the developer.

RD 020 012

MATH FUNCTIONS COMPUTER ASSISTED INSTRUCTION PROGRAM (MATH FUNCTIONS)

A program which teaches problem solving by an inductive method to students in grades 2-6

The *Math Functions Computer Assisted Instruction Program* is designed to teach those behaviors in elementary school mathematics which are based upon functional rules relating an input value to a single output value. Examples of the behaviors taught include: Translation of Roman numerals to Arabic numerals, writing standard numerals in expanded notation, adding fractions with common denominators, comparing the magnitude of different numbers, and finding the missing value in a number sentence. Approximately 100 objectives are available, and these cover one-fourth of the content of grades 2 to 6 in elementary school mathematics—those content areas related to functions. These objectives correspond to portions of the *Individually Prescribed Instruction in Mathematics Program* (IPI), but use of math functions is independent of IPI.

Math Functions teaches by an inductive method. In each step of the instruction for an objective, the student induces a functional rule from a set of examples. Additional examples can be asked for, and then the student demonstrates mastery of the rule by self-testing. Instruction for an objective proceeds through 2 to 12 steps before the objective is mastered. Differential performance at each step leads to adaptive branching between steps. Every objective includes both remedial steps and postmastery enrichment steps.

The program includes features designed to teach general problem-solving skills in addition to the specific mathematical skills. Problem-solving skills include: Gathering data, organizing data, formulating and testing hypotheses, using feedback, and knowing when to stop.

SUBJECT AREA(S)

Elementary mathematics and problem solving is the subject area.

Specific topics include addition of integers, comparison of fractions, multiplication of integers, place value, rounding off, number sentences, and reducing fractions. One hundred objectives are available for instruction.

INTENDED USERS AND BENEFICIARIES

The program is designed for use by elementary school students in grades 3 to 6.

GOAL(S) OR PURPOSE(S)

Math Functions provide experiences which enable the student: (1) To perform the instructed behaviors with 85 percent accuracy on a paper-and-pencil test, (2) to understand the concept of mathematical function in an informal manner, and (3) to improve general problem-solving skills.

PATTERNS OF USE

Objectives are independent of each other, but students must have mastery on prerequisite objectives before entering the program for any given objective. Students who work on many objectives benefit by the cumulative effect of their experience.

Students work individually at a computer terminal at a time determined by the teacher and/or the student.

ASSESSMENT PROVISIONS

The implementer must determine that entering students have prerequisite skills for each objective they attempt. Schools using IPI mathematics can use pretests available with that program, and math functions can be used as an alternative medium for instruction in certain objectives. In non-IPI settings, comparable pretests would be required.

After each working session on the machine, a summary of progress is printed for the implementer. The program determines when the student has met the mastery criterion for any objective. In IPI schools, the paper-and-pencil criterion-referenced posttest or the curriculum-embedded test can be used to assure that the program decision is correct.

TIME REQUIREMENTS

Objectives for mastery vary enormously in time. The shortest take 10 minutes, the longest take 120 minutes; and most are completed in 30 minutes. These times are comparable to paper-and-pencil instruction for the same objectives. Once students enter an objective, they should work 30 minutes each day until completing the work. The program allows longer or shorter sessions at the discretion of the student, who may stop work at any time. Since approximately one-fourth of the standard elementary mathematics curriculum is available on the program, students could work on math functions during one-fourth of their mathematics time for the year.

IMPLEMENTATION PROCEDURES

To use the program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype or teletype-compatible cathode-ray tube (CRT), and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. Approximately 3 months of expert programing would be required to adapt the program to most other time-sharing systems.

Teacher orientation requires approximately 2 hours, and each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performance within the program. Students work individually on the program, so any school organization that allows for students to work at their own pace on different objectives within the same classroom can support work on the program.

ASSURANCES AND CLAIMS

Assurances

During the 2 years of operation in a school setting, there were no observations of harm to students using the program. Students are treated uniformly, regardless of race or sex. The content of the program is mathematical and there are no sex, racial, age, socioeconomic, or religious biases.

The program has never been used outside of the producer's direct control, so no assurance of replicability or transportability is possible at this time. At the field test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites.

Claims

Math Functions was tested and revised continuously for 2 years. Four major new versions were developed during that time. Testing consisted of approximately 50 students using the program between each major revision. Detailed analyses of student errors were the basis for revisions. The percentage of students who passed paper-and-pencil transfer tests after using the program steadily increased during the revision cycles, finally reaching 90 percent.

Throughout its development, *Math Functions* achieved success at teaching the objectives in the curriculum. The best indicator of success is that 88 percent of all students entering the program mastered the particular objectives they were taught.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Math Functions Computer Assisted Instruction Program	1 per computer system	Cost of duplication	Reusable

NUMBER FACTS COMPUTER ASSISTED INSTRUCTION PROGRAM (NUMBER FACTS)

A program to teach and drill the elementary number combinations found in addition, subtraction, multiplication, and division tables

Number Facts Computer Assisted Instruction Program (Number Facts) is an interactive computer program designed to teach and provide practice in the elementary number combinations found in addition, subtraction, multiplication, and division tables. These are a vital prerequisite to the higher level arithmetic operations, and an ability to recall them quickly can facilitate acquisition of mathematical skills in general. The student works at a computer terminal according to sequence of steps incorporated in the program. The program begins by giving the student specific instruction in groups of problems with which the individual student has had particular difficulty. For example, a student who has missed addition problems with the number 6 will be given special instruction in these problems. As the student gets more proficient and makes fewer errors, the program shifts to a special item selection procedure based on a mathematical model of associative learning.

Number Facts is intended to be used as a supplement to classroom work. Whenever the teacher or student decides it is useful, the program can be accessed. The program runs for 10 minutes of instruction, or it can be terminated earlier if desired. Records are kept within the computer so an individual student can return to the program at any point or begin again whenever necessary. A special output program provides reports on the progress of each individual student after each session. The student or teacher can select from the program any type or mix of problems at any time.

Tests of the program indicate that it provides maximally effective instruction in one of the most important basic arithmetic skills, mastery of number facts. Its flexibility makes it adaptable to a variety of teaching styles, and it reduces greatly the tedium experienced by both teachers and students in the standard methods of fact instruction.

SUBJECT AREA(S)

Instruction is given in the basic single-digit arithmetic operations of addition, subtraction, multiplication, and division.

INTENDED USERS AND BENEFICIARIES

The instructional program is meant to be used by students in grades 1-5. Teachers benefit by a reduction in the normal test checking and management required for instruction in arithmetic operations.

GOAL(S) OR PURPOSE(S)

Number Facts provides drill and practice which enable the student to recall quickly and reliably the single-digit number facts of addition, subtraction, multiplication, and division.

It is intended that students will learn basic number combinations faster and more pleasantly than they presently do, and that there will be a reduction in the administrative workload of teachers. Number combinations are a vital prerequisite to further arithmetic and mathematics, and a failure to learn them well has been shown to be a major obstacle to progress in mathematics.

PATTERNS OF USE

Usage of this program is controlled by the student individually or in consultation with the teacher. At the beginning of each session, the program asks the student which operation (addition, subtraction, multiplication, or division) or combination of operations is desired. Based on the student's response and whichever stored records of past performance are available (if any) for that student on that operation, the computer generates an instructional sequence and practice problems. The student can request, or the teacher can prescribe, as many or as few sessions on the program as necessary.

ASSESSMENT PROVISIONS

No previous screening or evaluation of students is required. Students use the program when they and/or the teacher thinks it appropriate.

Complete historical files are kept in computer memory for each student session. An output program prints a summary of each session, giving the number of problems correct and incorrect, the average answer time, and the specific problems missed. This report can be used by the teacher or student to make decisions about further program use.

TIME REQUIREMENTS

The program terminates after 10 minutes, but the student can end a session earlier by typing "STOP." The number of sessions spent on the program is decided by the teacher and/or student. For individual students, it is recommended that use be discontinued when improvement in accuracy on the particular type of fact (e.g., addition, division) levels off, which may occur before 100 percent accuracy is achieved. Research indicates that, for some students, further practice after this point is unlikely to bring about perfect mastery.

IMPLEMENTATION PROCEDURES

The program requires a cathode-ray tube (CRT) computer terminal and access to a time-sharing computer system capable of running programs written in FORTRAN IV. Some alteration may be required to adapt the program to the local computer system. Teachers require about two 30-minute orientation sessions in order to understand the purpose and usage of the program.

ASSURANCES AND CLAIMS

Assurances

Number Facts has been used in the suburban elementary school affiliated with LRDC for 3 years. It has been used by 250 students for approximatley 8000 sessions. There have been no observations or reports of discomfort or dissatisfaction with the program. After 3 years, interest is still increasing.

The content of the program is mathematical and is not likely to perpetuate sexual, racial, religious, or ethnic stereotyping.

The program has never been used outside of the producer's direct control; therefore, no assurance of replicability or transportability is possible at this time. At the field test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites.

Claims

Evaluations of *Number Facts* based on studies conducted during field testing at the suburban school where it operates, indicate that: (1) Students become faster and more accurate at number facts while using the program, (2) the specific instructional strategy used by the program reduces errors, and (3) the individualization procedures used in the program are consistent with individual differences in the population of students. Further evaluation indicates that use of the program in the school leads to better learning of number facts than alternative paper-and-pencil modes of instruction.

WORD PROBLEMS COMPUTER ASSISTED INSTRUCTION PROGRAM (WORD PROBLEMS)

A program which teaches noncomputational skills involved in solving arithmetic word problems to grades 3-7

The *Word Problems Computer Assisted Instruction Program* teaches the noncomputational skills involved in solving arithmetic word problems. It teaches students how to translate verbally presented problems into mathematical terms and to set up algebraic equations that can be solved using known operations. The computer prints problems, does all the computations the student directs, judges whether answers the student proposes are correct, prints hints on request, and sequences problems by difficulty level.

Because students are directed to command the computer to calculate values, rather than to do their own calculations, the program can make use of numbers larger than students can conveniently handle. These larger numbers are important, since in more traditional word-problem instruction the numbers cue the arithmetic solution. In the *Word Problems*, program numbers are chosen so that one is always divisible by another. This effectively eliminates irrelevant cuing by the numbers and makes the student seek more appropriate rules for solution.

The program hints provide three different types of assistance: The first hint identifies the unknown quantity and asks the student to reread the problem, the second hint is an analogous problem stated in less complex syntax, but with the same meaning—the student is directed to compare the new wording with the original; and the third hint translates the problem to a number sentence that the student can solve directly.

The sequencing of the word problems is a major factor in the instructional efficacy of the program. Traditional instruction has placed a homogeneous group of addition word problems after an addition unit, and similarly placed other sets of problems so that each problem cued the correct solution procedure for the others. The *Word Problems* program sequences problems on the basis of the information processing demands on the solver, rather than on the basis of the required arithmetic process. Problems that require a similar quality and quantity of thought for understanding are grouped together into objectives. Twenty-four objectives include all the instructional problems. The 24 objectives are arranged in a complex branched hierarchy that forms the basis for sequencing through the objectives. The hierarchy is determined by increasing information processing demands.

SUBJECT AREA(S)

The subject area is computer-assisted instruction in elementary school mathematics, specifically the noncomputational skills of solving arithmetic problems.

INTENDED USERS AND BENEFICIARIES

Although designed primarily for students in grades 3-7, the program might benefit older students who have difficulty with arithmetic word problems.

GOAL(S) OR PURPOSE(S)

Word Problems provides experiences which enable students: (1) To identify the arithmetic processes required to solve word problems, (2) to use the concept of variable in algebra, and (3) to develop general problem-solving skills.

PATTERNS OF USE

Objectives are hierarchical and cumulative. Students should begin with the first introductory problems and proceed through the objectives as the program determines mastery or nonmastery for them.

ASSESSMENT PROVISIONS

All students enter the program at the introduction and proceed by steps to their competence levels. Material that is already known is mastered quickly and serves to familiarize the students with skills needed for success in the program.

After each session, a summary report, showing the student's status on each of the 24 objectives and what progress was made during the session, is printed for the teacher and students.

TIME REQUIREMENTS

Data are not available to assess time requirements. Recommended usage would be one 20-minute session each week for a school year, although other patterns of use are possible.

IMPLEMENTATION PROCEDURES

To use the program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype or teletype-compatible ray tube (CRT) and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. Approximately 3 months of expert programing would be required to adapt the program to most other time-sharing systems.

Teacher orientation requires approximately 2 hours, and each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performance within the program. Students work individually on the program, so any school organization that allows for students to work at their own pace on different objectives within the same classroom can support work on the program.

MATERIALS AND EQUIPMENT

Use of *Word Problems Computer Assisted Instruction Program* requires a computer system as described under "Implementation Procedures." Teacher orientation is available from the developer.

ASSURANCES AND CLAIMS

Assurances

In the field testing of the *Word Problems* program to date, no harmful effects of the program have been observed.

Care was taken to assure that the product does not perpetuate sexism, racism, or other biases related to religion, age, or socioeconomic stereotypes. Situations depicted in the problems presented are set up so that male and female names are inserted randomly for the actors in the problem. In adapting the program to local sites, it is possible to substitute any set of names, thus making the problems more suitable for the target population.

The program has never been used outside of the producer's direct control, so no assurance of replicability or transportability is possible at this time. At the field test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites.

Claims

Careful product development is claimed for the word problems program. *Word Problems* has undergone three cycles of development and testing. The first cycle included laboratory work with a simulation of the final product with four students. The second cycle pilot tested a preliminary version of the program with five students. This led to the current version which is being tested with 28 students to determine the effectiveness of the teaching strategies.

Principles of information processing psychology were used to create teaching objectives, and instructional strategies include those found most effective in the literature. The program was designed according to the Process Individualization Curriculum (PIC) Model developed at the Learning Research and Development Center, which employs content, concept, and component analysis as a means of selecting the proper sequence and content of instruction.

RD 020 015

DEVELOPING MATHEMATICAL PROCESSES

A program for grades K-6 which provides an intuitive introduction to the major ideas of geometry and statistics

Developing Mathematical Processes (DMP) is a research-based, elementary mathematics program developed by the Analysis of Mathematics Instruction (AMI) Project at the Wisconsin Research and Development Center. It is the mathematics component of the center's program of Individually Guided Education (IGE). DMP provides a complete mathematics program for the elementary school, including not only the usual topics of arithmetic, but also an informal, intuitive introduction to major ideas of geometry and statistics. DMP is based upon the assumption that children learn best in an active environment where they can seek out answers to problems of personal interest. This active environment stems from the development of arithmetic through a measurement approach, with the children themselves generating and working with the numbers and their relationships.

In a measurement approach, children examine objects in their world and focus on some attribute (e.g., length, numerousness, weight, capacity, area, time). They use various processes (describing, classifying, comparing, ordering, equalizing, joining, separating, grouping, and partitioning) to explore relationships between objects. Once children are familiar with the attributes, they symbolically represent (measure) them. Likewise, they symbolically represent the relationships between objects with mathematical sentences. Then the children represent mathematical sentences with real objects to check their validity.

The entire DMP program has been built around specific learning objectives. Closely related objectives and the activities designed to promote their attainment have been clustered to form approximately 90 topics. Each topic will contain appropriate teacher's guides, student booklets, textbooks (for intermediate levels), testing materials, and kits of physical and printed materials. The topics have been grouped into units to organize materials and to facilitate the continuous progress design of IGE. The topics also have been grouped into levels that approximate 1 school year of study.

The primary materials include topics 1-40, the lower intermediate materials include topics 41-65, and the upper intermediate materials include topics 66-90.

Since the DMP approach to elementary mathematics may be new to many teachers, successful implementation of the program requires inservice training. In order for a school district to help teachers use DMP effectively, a coordinator who is well versed in the rationale and pedagogy of the program is needed to conduct the inservice program. A carefully developed plan has been designed to effect the implementation of DMP.

SUBJECT AREA(S)

DMP is a complete elementary mathematics program for grades K-6. The content of the program includes instruction in the arithmetic of rational numbers, an informal introduction to geometry, and some fundamentals of statistics. Arithmetic evolves from physical problem situations and advances to the use of relevant symbolization and mathematical sentences. Unnecessary technical vocabulary is avoided; children can communicate their ideas verbally because they develop an understanding of the language through direct experiences.

The geometry of DMP is an intuitive look at the sizes, shapes, and relationships of two- and three-dimensional objects. Elementary notions of statistics help the children organize and analyze the data they collect. Validating solutions to problems is treated as an important procedure throughout the program. The activities provide repeated opportunities for meaningful practice in problem solving, with emphasis on development of basic skills through understanding of processes.

INTENDED USERS AND BENEFICIARIES

Though DMP is designed for use in a multiunit elementary school (MUS-E), it can be used effectively by teachers with students of varying abilities in a variety of school settings. The DMP large-scale field test has included suburban, urban-core, and nonurban schools, with both public and private schools participating. The program has been used with children of differing socioeconomic backgrounds, with children in special education classes, and with children on an American Indian reservation. A special Spanish version of the student materials will be available from the commercial publisher for use in areas of the country where such a version is necessitated.

GOAL(S) OR PURPOSE(S)

The goals of DMP are: (1) To foster more careful attention to the learning progress and problems of the individual child; (2) to develop more favorable teacher and student attitudes toward mathematics, thereby generating a more wholesome school and class atmosphere; (3) to help children become inquiring, independent problem solvers; and (4) to enable children to acquire and demonstrate competency in the arithmetic of rational numbers, the geometry of physical time-space, and the fundamentals of statistics.

PATTERNS OF USE

The 90 DMP topics in the 7 levels of the program have been arranged in sequence to provide variety and to space the development of concepts. Students may progress through the topics in a variety of ways. The program provides a master sequence chart, with suggested guidelines, from which teachers select appropriate topics and activities for each child. DMP is sequenced around a hierarchically ordered set of objectives and includes a complete assessment and management scheme. Upon completion of all materials, the program will provide complete mathematics instruction for students in grades K-6.

ASSESSMENT PROVISIONS

The assessment procedures allow a teacher to measure children's progress by their performance on a given set of objectives. There are three categories of objectives: (1) Regular—an objective that most children are expected to master by the end of a topic, (2) preparatory—an objective that most children are not expected to master by the end of a topic, and (3) review—an objective that has a regular objective in a previous topic and is repeated for review work. Three levels of mastery are suggested to rate the progress a child makes on each regular objective: M—mastery, P—making progress toward mastery, and N—needs additional help before mastery can be attained.

DMP offers many forms of assessment and several ways to keep records. The assessment procedures are designed to provide placement information, for which placement inventories and pretests are provided; to assist in determining a rating for a child on a regular objective, for which observation schedules and topic inventories are supplied; and to check on a child's level of mastery of previously mastered objectives, for which a series of checkup tests are provided. With the exception of the placement inventories, which are used for initial placement, the procedures are used with specific topics.

Since children progress through DMP topic by topic and not year by year, it is important for teachers to maintain assessment records so that the most advantageous instructional decisions can be made for each child. DMP provides three kinds of pupil-performance records from which to choose: (1) Topic checklist—to record observations which the teacher makes about the children during the course of a topic; (2) individual progress sheet—to provide a cumulative record of each child's progress as the student progresses through several topics; and (3) group record card—to record, for an entire group of children, the level of mastery of the regular objectives.

TIME REQUIREMENTS

Though DMP is a continuous progress program, certain topics have been designated as being appropriate for each grade level: topics 1-14, kindergarten; topics 15-27, 1st; topics 28-40, 2d; topics 41-52, 3d; topics 53-65, 4th; and topics 66-90 (under development), 5th and 6th.

Each topic is designed to be completed in approximately 2-4 weeks, with mathematics class time varying from about 2 hours per week in kindergarten to about 5 hours per week in the upper grades.

IMPLEMENTATION PROCEDURES

The dissemination and utilization of DMP has been carefully and systematically planned so that the program will be widely and effectively used. A four-stage implementation model has been developed by the AMI project to implement DMP; the four stages in that model are awareness, installation, maintenance, and refinement.

The first stage, awareness, has two primary functions: To introduce leaders and decisionmakers in school systems to DMP and to provide indepth information to those leaders and decisionmakers so that they can determine whether to make a firm commitment to DMP.

The second stage, installation, is designed to provide the necessary assistance to those who adopt DMP to begin the program. Therefore, the primary functions of this stage are: To provide the teachers inservice necessary to acquaint them with DMP instructional and assessment materials, and the management of instruction and to provide information to principals or other school leaders to enable them to support the implementation of DMP. In addition to the training which a local coordinator receives at a 3-day conference, a manual is provided for use with inservice materials being developed for DMP.

The local coordinator is the key person in the third stage of implementation, maintenance. The main purpose of the maintenance program is to give teachers support and guidance while they adapt their teaching styles to DMP. Other purposes are to provide guidance to the principals and other school leaders as they support the DMP implementation program and to gather information to evaluate the effectiveness of the initial installation activities.

The final stage of the implementation is refinement. The developers of DMP realize that an educational innovation is likely to lose its effectiveness unless means are provided for its continual study and revision. To increase this capacity for self-renewal in DMP schools, appropriate staff training programs will be a part of the refinement stage of the DMP implementation.

ASSURANCES AND CLAIMS

Assurances

Information gathered from extensive pilot testing and subsequent field tests in 21 States indicates that the DMP materials can be used successfully by competent, qualified teachers and can be implemented successfully when the recommended implementation procedures are followed. Neither the developers nor the publishers have received reports or evidence of harm associated with the use of this program.

The developers of DMP have made a concentrated effort to insure that program materials do not display social bias, including ethnic and sexual stereotyping. Such shortcomings have been overcome through careful revision of the materials.

Claims

Upon completion of all curricular materials, DMP will provide a program of complete, comprehensive mathematics instruction for students in grades K-6. The program has been carefully developed, piloted, and field tested. From the results of both small- and large-scale field tests, it has been concluded that the basic instructional approach of DMP (i.e., teaching children elementary mathematics via an activity-oriented, measurement approach) is sound, viable, and productive. Students attain high levels of mastery of the program's objectives. Teachers almost unanimously have accepted the program because of the enthusiasm and success it generates in students.

The pilot testing and field testing of DMP materials have continued in 1974-75. The gathering of formative and summative data about DMP is an ongoing task of the AMI project.

MATERIALS AND EQUIPMENT

INDIVIDUALIZED MATHEMATICS

*A program for individualized adaptive instruction
including independent study for grades K-2*

Individualized Mathematics (IM) is a program for individualized adaptive instruction in mathematics for use in grades K-2. The curriculum consists of 33 instructional units which are sequenced in a hierarchical structure of relationships. Each unit involves an average of five instructional objectives, each of which is the basis of one specific lesson. The total program includes instructional materials for each objective, placement tests, unit pretests, unit posttests, and curriculum embedded tests (CET's). Other program components include presciption forms for each unit, a teacher's manual, a testing manual, and materials to be used in providing review and maintenance of basic operations command.

Instructional materials include both lesson booklets and manipulative materials. Manipulatives are concrete objects which children can physically handle, giving a spatial and tactile dimension to the basic concepts of mathematics. A major feature of the IM program is that it allows the pupil to use manipulative lesson materials largely on an independent-study basis. This is accomplished by providing a picture or "model" for each manipulative activity. The student first arranges the manipulative materials to duplicate the model and then practices this type of activity by using the same procedure with other sets of materials. Manipulative lessons introduce basic concepts and operations by illustrating or solving them through pupil manipulation of concrete objects. This represents an effort to provide the pupil with the kinds of concrete experiences suggested by the work of Piaget, Bruner, Dienes, and others, and to do this within the context of a system that is maximally adaptive to the needs and abilities of the individual learner.

SUBJECT AREA(S)

The program teaches primary-grade arithmetic starting with the comparison of sets, an introduction to counting and the counting numbers, and proceeding through the development of the basic operations of addition, subtraction, multiplication, and division. The program also introduces the student to fractions and to such areas as time, money, and applications of basic operations in story problems.

INTENDED USERS AND BENEFICIARIES

This program could be used in grades K-2 in any school attempting to provide individualized adaptive instruction in arithmetic, either where instruction is prescribed by the teacher or where the students schedule their own learning activities. It could also be used in an open-classroom situation under a plan whereby pupils could use some of the diagnostic tests and the self-instructional materials to plan and carry out their study of basic arithmetic skills at the time when the acquisition of such skills seems essential.

GOAL(S) OR PURPOSE(S)

General goals of the program, which have been defined in terms of abilities and attitudes that the pupil is expected to acquire, are: (1) To master a mathematics content which emphasizes basic structure, properties, and relations, in addition to competency in performing arithmetic operations, and to be able to display this mastery at a level of understanding which provides a sound basis for "moving on" in mathematics; (2) to be able to employ "study skills" abilities that permit the student to learn from a variety of types of materials and experiences and to display abilities in self-direction and self-evaluation which permit effective independent study; and (3) to display a positive attitude toward learning and toward the study of mathematics.

PATTERNS OF USE

Units of instruction in *Individualized Mathematics* are arranged in a hierarchical structure which permits pupils to proceed through the curriculum following a variety of individual paths.

Essentially all lesson materials have been designed to be self-instructional, and most pupils should be able to use them independently or with only minimum assistance and instruction from the teacher. This means that a major part of teacher time is spent in traveling about the classroom, responding to pupil questions, reinforcing desirable performance, and providing general supervision of independent study activities. However, some teachers choose to introduce certain lessons through small-group instruction, which this curriculum also permits. The objectives, together with the lesson materials and tests that make up the IM program, are intended to provide a complete curriculum in mathematics for kindergarten and 1st and 2d grades. In schools where IM has been implemented thus far, pupils proceed from this program into the *Individually Prescribed Instruction (IPI) Math Curriculum* (as developed at the Learning Research and Development Center and revised by Research for Better Schools). This means that particularly accelerated 2d-grade pupils may move on to appropriate units in IPI math. With both IM and IPI, teachers are also encouraged to make some use of group instruction to clarify and review certain topics and to illustrate everyday applications.

ASSESSMENT PROVISIONS

Individualized Mathematics has a structured testing program which is designed to place each student at the proper point in the curriculum, to diagnose specific needs, and to monitor pupil progress.

(1) Placement tests are used to determine which units a pupil has already mastered and which need to be studied. These consist of separate tests for each unit which can be put together in various ways to provide an appropriate battery for each individual student, depending upon grade level and past performance.

(2) Unit pretests provide a subscore for each objective in a unit, and pupil results are used to ascertain which objectives need to be studied.

(3) Curriculum-embedded tests are short tests measuring the pupil's mastery of one objective and are administered as soon as the pupil completes the study of each objective. These tests are used to aid in deciding when the pupil should move on to the next objective.

(4) Unit posttests are alternative versions of the unit pretests and are used to determine pupil mastery of all objectives in a unit after study in the unit has been completed. Results from such tests provide major data for determining when a pupil should move on to a new unit.

TIME REQUIREMENTS

This is an individualized program, and the amount of time required to complete it will vary greatly from student to student. The typical student will complete most of the curriculum by the end of 2d grade. As indicated earlier, some pupils will complete all units before the end of 2d grade and move on to more advanced work (IPI Math materials have been used to serve this purpose in current implementations). Slower pupils may continue in IM units as they move into 3d grade.

IMPLEMENTATION PROCEDURES

The IM program includes all materials needed for implementation: Tests, lesson materials, prescription forms, student record blanks, and other forms. Current implementations indicate that if a classroom has more than 15 or 20 pupils, a teacher aide or assistant teacher is probably necessary for effective management of the program.

Some form of teacher-training workshop should be provided before teachers start using the program. This type of training has been provided (e.g., in three 2-hour sessions) at the schools where the program has been implemented thus far. However, a formal training program has not yet been designed. Experience suggests that the necessary training can be carried out using all pupil materials plus certain mimeographed documents prepared by the development staff. This training must be provided by someone fully familiar with the program, such as a teacher or supervisor in a school where IM has been used.

The IM program requires storage space for the boxes of manipulative lessons and for lesson booklets, tests, and other materials. The type of storage used may be made a function of what is available. Typical requirements could be met through use of one three-drawer filing cabinet and approximately 30 feet of bookshelf space (on which to file the small boxes containing manipulative lessons).

ASSURANCES AND CLAIMS

Assurances

The *Individualized Mathematics* program has been used for over 3 years in one large central-city school in the city of Pittsburgh and in one smaller suburban school. It was also used in two 1st-grade classrooms in Philadelphia in a 1-year study carried out by Research for Better Schools. Both black and white teachers have used the program, and the total sample of students involved has been over 50 percent black. We have received no reports of racial or sexual bias from any of the persons involved in this total development and implementation process. Also, there have been no reports of any other types of harm resulting from use of the program.

The implementation of this program has been carried out in two schools used for the initial trial of a variety of LRDC programs, but the IM program is now the responsibility of the school administrators and teachers with no supervision from the developers. On the basis of this experience, it can be assumed that the program can be managed by a local school staff with no need for the involvement of development personnel.

Claims

A major goal of the IM program was to develop lesson materials and a system of classroom management with which pupils could use manipulative activities (pairing, counting, comparing sets of concrete objects), largely on an independent study basis, to master specified instructional objectives. The achievement of this goal has been demonstrated in the successful implementation of the program in two elementary schools in the Pittsburgh area and in classrooms in two schools in Philadelphia.

Achievement on standardized tests for pupils using IM has been at, or above, grade level. On tests of "arithmetic concepts," the area in which the program has placed major emphasis, performance has been well above grade level. In general, pupils using IM in the LRDC development schools have shown somewhat higher performance on standardized tests than did pupils using pre-IM programs. This is significant in that these pre-IM programs were also programs for individualized instruction in mathematics and, in turn, had been shown to result in higher achievement than was produced when earlier nonindividualized programs were used.

The *Individualized Mathematics* (IM) program was developed based on knowledge gained through LRDC's experience with its earlier math programs (PEP and IPI). Important inputs were obtained from teachers who were using these earlier programs. IM went through a number of cycles of design-tryout-revision over a 3-year period. These tryouts were conducted in two different schools; and continuous formative evaluation data were obtained from pupil performance on the IM tests, from classroom observation by project staff members, and from reports by teachers. Further evaluation data resulted from an intensive 1-year tryout, conducted by Research for Better Schools, in two classrooms in Philadelphia.

AVAILABILITY

A revised inhouse version of *Individualized Mathematics* will be available by November 1975. Materials are currently being revised for the purpose of reducing the cost of the total program. Preliminary negotiations are also underway in an effort to arrange for production by a major publisher. It is being used in two schools in the Pittsburgh area and is available for observation and study at these sites.

Present work on revision and possible publication should result in making the program generally available at a time to be determined by publication schedules.

INFORMATION CURRENT AS OF MARCH 1975 ■

INDIVIDUALLY PRESCRIBED INSTRUCTION IN MATHEMATICS (IPI), EDITION II

A multimedia program for grades K-6 with planned transfer of responsibility to the student

IPI Mathematics, Edition II (IPI) is a mathematics program for students in grades K-6. An individualized program, Individually Prescribed Instruction (IPI) includes diagnostic and evaluative tests as well as self-instructional materials for specified mathematics content. IPI was designed so that students can enter the program at the level appropriate for them, work at their own rate on materials not already mastered, and work in small groups when the teacher sees a need for such grouping. A principal feature of the IPI instructional strategy is the planned transfer of responsibility from teachers to students for their own instructional management. Self-management, self-initiative, and learning how to learn are important features of IPI.

The content for this product is specified in a continuum of 359 objectives. Edition II objectives, the result of an extensive revision process, evolved from *Individually Prescribed Instruction in Mathematics, Edition I* objectives. Revisions focused on updating content and language, adjusting the sequence of objectives on the basis of field testing, filling in content gaps, and accommodating the shift in program emphasis from one of exemplar-replication to one of greater dependence on inductive-inference learning. The content of the present edition includes those concepts and basic skills taught in contemporary mathematics programs and those measured by commercially available standardized tests.

IPI materials consist of diagnostic tests, self-instructional booklets, unit posttests, and answer keys for all materials. The principal instructional materials are response-dominant self-instructional booklets that direct students to react frequently to instructional questions and/or examples. The booklet provided for each objective contains two instructional sequences and criterion-referenced mastery tests. Audiotapes are available for many of the beginning self-instructional booklets. Although the IPI materials available from the publisher do not include manipulative aids, many of the IPI booklets do, in fact, list specific aids considered appropriate for use with the respective booklets.

Students progress through the IPI continuum at their own rate. The diagnostic tests and the linear nature of the continuum assure that students work only on objectives which they have not already mastered but for which they have the necessary prerequisite skills. Manipulative aids, audiotapes, small-group seminars, and teacher or peer tutoring may be included as part of a student's work on an objective. As students move from the primary to the intermediate grades, they become more responsible for gathering their own learning materials and assessing and planning their work. In the upper elementary grades, students frequently score their own work.

IPI teachers spend most of their time facilitating learning for individual students. Teachers, for example, diagnose student responses on a given IPI pretest and then prescribe the appropriate material in the corresponding instructional booklet. Teachers may also prescribe manipulative materials or small-group instruction for a student, but much of the IPI teacher's time is devoted to tutoring individual students and leading small-group sessions. In the primary grades, teacher aides are employed to score the booklet pages and tests and to record student progress. Teachers as well as aides are trained prior to the program's implementation at a workshop conducted by the school's instructional leader, usually the principal.

SUBJECT AREA(S)

The subject area is elementary school mathematics, including topics in: Numeration/place value, addition, subtraction, multiplication, division, fractions, money, time, systems of measurement, geometry, and applications.

INTENDED USERS AND BENEFICIARIES

The curriculum was designed for all students in grades K-6. The program has also been used successfully by both elementary and junior high school-age children in mainstream classes, programs for "slow learners," and special education classrooms.

GOAL(S) OR PURPOSE(S)

IPI is designed to facilitate the management of individualized mathematics instruction adaptable to a wide variety of classroom settings. The IPI instructional materials and tests are designed to promote student mastery of specified mathematics content. The IPI management scheme permits students to be self-managing and self-initiated learners and frees teachers to tutor individuals or lead small groups. The teacher training materials were designed to inform IPI teachers about program materials and management options, as well as to give them an understanding of their role as tutors and diagnosticians.

PATTERNS OF USE

Three hundred fifty-nine behaviorally stated objectives, organized in a linearly sequenced continuum, specify the content. The objectives are organized into the 10 topic areas listed above. Within each area the objectives are, insofar as possible, sequenced so that each one builds on those that precede it and is a prerequisite to those that follow it. Within the sequence of objectives in each topic area, the objectives are grouped into meaningful subsets or units. These units are designated as representing different levels of progress. Edition II includes seven levels of difficulty labeled A-G. A pupil must demonstrate mastery of all A-level objectives before working in level B, all B-level objectives before working in C, and so forth. At any given level, topic areas are ordered from numeration/place value to applications (see above listing in "Subject Area(s)").

ASSESSMENT PROVISIONS

IPI includes various assessment instruments used for monitoring the student's progress and determining mastery. Placement test results are analyzed to determine whether the student needs to work in a specific unit. Similarly, pretest results indicate those objectives within a given unit in which the student needs instruction. Each self-instructional booklet contains two Curriculum-Embedded Tests (CET's), the results of which are used to determine whether the student has mastered a particular objective. A student's mastery of all the objectives within a given unit is assessed on a unit posttest.

TIME REQUIREMENTS

Individually Prescribed Instruction in Mathematics, Edition II is designed for use during the 30-45 minutes normally assigned to the study of mathematics and related topics.

IMPLEMENTATION PROCEDURES

IPI has been implemented successfully in traditional classrooms, open classrooms, and learning resource centers. The publisher arranges 3-day training sessions for new IPI school instructional leaders, usually the school principal. These training sessions follow the IPI administrative training program and are conducted by principals already using IPI. Using training materials available for such sessions, the newly trained instructional leaders are responsible for training their own teachers and aides. Once implemented, the program can be used without developer assistance.

Summary Cost Information

First-year schools should expect to spend $1,500 for each 150 to 200 students enrolled, based upon estimates by New Century Education Corporation, the product publisher. The minimum order for a new school is $1,500. The minimum for all subsequent replacement orders is $50. The cost per student is variable and depends on patterns of utilization of materials. A recent survey conducted by the publisher of 40 user schools indicated 65 percent of these schools spent less than $7.85 per student and 40 percent spent less than $5. This was based upon 1974-75 prices.

Personnel Required for Product Adoption and Implementation

The developers of IPI mathematics suggest that an aide is desirable in the primary grades (1-3) to handle nonteaching requirements. The publishers provide training for one to three persons free of charge, depending on the amount of the initial order. The trained person is usually the principal and/or other leaders of instruction who, in turn, train all teachers in the school. There are no other necessary support services.

ASSURANCES AND CLAIMS

Assurances

Individually Prescribed Instruction in Mathematics, Edition II, which includes teacher and administrator training packages, can be easily installed and maintained in either open or structured learning settings by classroom teachers without any assistance from the developer. The program has been used by varied student populations in a wide variety of learning settings, ranging from regular classes to compensatory education classes and special education groups (such as, handicapped). Thus, the program has demonstrated transportability and replicability.

IPI Mathematics, Edition II materials are free from social biases. The content of the program is neutral regarding religion, age, and socioeconomic status stereotypes. Male and female and racial representations in the program meet design intentions for social fairness.

Individually Prescribed Instruction in Mathematics, Edition II, an edition revised on the basis of extensive research and field testing, has been in use in hundreds of schools throughout the country for 3 years. Thus far, neither developers nor publishers have received any reports of harmful effects due to the program.

Claims

This product is an individualized and self-instructional K-6 mathematics program. Diagnostic criterion-referenced tests enable the teachers to determine those concepts and skills each student needs to learn and enables them to prescribe relevant instructional materials to individual students (Hambleton, 1974). The program design permits students to study at their own pace. The materials written in response-dominant mode are self-instructional and thereby permit the teacher either to serve as a tutor to individual students or to guide small-group activities. The program design provides students with the opportunity for self-management of learning and self-evaluation of their own achievements.

The Educational Products Information Exchange (EPIE) report offers the opinion that the program can deliver learning in the cognitive dimension. This opinion has been upheld by numerous evaluation results which indicate that *Individually Prescribed Instruction in Mathematics, Edition II* is effective when it is properly implemented and when measures used for the evaluation are valid. Its effectiveness is outstanding in terms of students' achievement on standardized tests, especially when it is employed for a second year and beyond. More than 90 percent of the reviewed evaluation studies demonstrated its superiority in the affective domain as compared with other similar programs.

The program is manageable by a trained teacher. However, a trained aide is considered necessary in primary grades. Thoughtful scheduling would permit one aide to serve five or six classes. Virtually no changes of existing school resources are required.

The content is accurate, comprehensive, and contemporary. These aspects have been established through outside expert opinion, evaluation results from field testing, and reports by more than 400 teachers in the research for better schools nationwide-network of schools.

Individually Prescribed Instruction in Mathematics, Edition II was developed on the basis of sound instructional theory (Glaser, 1965) and through an extensive research-development-field testing-revision model. This continuing improvement and revision process based on empirical evidence helps to insure the intrinsic quality of the program and to progressively build a substantive body of instructional theory on a more rational and less dogmatic foundation.

MATERIALS AND EQUIPMENT

INDIVIDUALIZED MIDDLE MATHEMATICS (IMM), LEVELS I AND II

A mathematics program allowing entry of students at individual rates and work pace

Individualized Middle Mathematics (IMM) is an instructional program for students in grades 7 and 8. An individualized program, IMM includes self-instructional materials for specified mathematics content as well as diagnostic and evaluative tests. IMM was designed so that students can enter the program at an appropriate level, work at their own rate on material not already mastered, and work in small groups or in a teacher-guided group activity. IMM students manage much of their own learning—scoring pages, recording progress, selecting the order in which they will study certain topics, and selecting from among optional activities. Self-management, self-initiative, and learning how to learn are a part of IMM.

IMM content is primarily a synthesis of contemporary junior high mathematics programs developed during the reform projects of the sixties and more recent movements that include manipulative and laboratory work as part of instruction. Learners from any elementary math program who have mastered the stated prerequisite skills can use the program. Levels I and II contain content usually associated with the 7th grade. (Forthcoming levels III and IV will cover 8th-grade content.) The program is organized into seven areas: Foundations, integers, rationals and reals, geometry and measurement, probability and statistics, equations and inequalities, and applications. IMM provides the developmental/intuitive experiences which are necessary to the academic sequence of middle mathematics, e.g., algebra, geometry. At the same time, it takes into consideration that many students will use mathematics primarily in applied rather than academic situations. For this reason, the program contains a broad spectrum of activities including optional special activities for both enrichment and maintenance.

IMM instructional materials consist of diagnostic tests, self-instructional booklets, unit posttests, special activities, and answer keys. The principal instructional materials are response-dominant, self-instructional booklets that direct students to frequently react to problems or instructional questions. The self-instructional booklet contains diagnostic-prescriptive instruments, two instructional sequences, and criterion-referenced mastery tests.

Throughout the IMM program, students learn to make choices. They choose the order in which units are studied, which special activities they will complete, whether they will work independently or in small groups, and when to seek help from the teacher. As they progress through the program, they become increasingly capable of working independently, of scoring their own materials, and of keeping necessary progress records. Since some of the topics in junior high level mathematics are not sequentially dependent upon each other, the IMM hierarchy of objectives permits students to proceed through the program by different sequences.

IMM gives the teacher more time to become involved in the learning activities of individual students. The teacher can choose to instruct small groups of students who are working on a common topic or to tutor individual students. Individualized teacher training materials provide an overview of the program, describe the function and intended use for the program components, and give plans and suggestions for program management.

SUBJECT AREA(S)

Mathematics, including topics in foundations, integers, rationals and reals, geometry and measurement, probability and statistics, equations and inequalities, and applications are the subject areas.

INTENDED USERS AND BENEFICIARIES

(*Individualized Middle Mathematics*) Levels I and II is primarily for 7th-grade students who have a mastery of the limited number of stated prerequisite behaviors. The complete IMM program, levels I-IV, is designed for those learners in grades 6-9 who have the prerequisite skills.

GOAL(S) OR PURPOSE(S)

IMM is designed to facilitate the management of individualized mathematics instruction that is adaptable to a wide variety of classroom settings. The IMM instructional materials and tests are designed to promote student mastery of specified mathematics content. The IMM management scheme permits students to be self-managing and self-initiated learners and frees teachers to tutor individuals or small groups. The teacher training program was designed to inform IMM teachers about program materials and management and to give teachers an understanding of their role as tutors and diagnosticians.

PATTERNS OF USE

Units within each topic area are ordered. A student must demonstrate mastery of the objectives for rationals and reals at level I before going to level II. However, at any level, students may choose the units they wish to study. There are two limitations: The student must demonstrate mastery of the objectives in Level I Foundations before working in any other unit; and at all levels, the student must demonstrate mastery of the objectives in all other units at that level before working in the equations and inequalities unit and the applications unit. The equations and inequalities unit must be completed before beginning work in the applications unit. An additional option for the student continuing to the next level in a given area is also provided. For example, after demonstrating mastery of all the objectives in Geometry Level I, the student may study the geometry objectives at level II before completing the rest of the units at level I. Within units, objectives may be studied either in numerical order or in the order of a specified hierarchy.

ASSESSMENT PROVISIONS

IMM includes various assessment instruments that monitor the student's progress and determine mastery. An entry test determines whether the student has the prerequisite skills for the program; placement tests determine whether the student needs to work in a specific unit; and pretests indicate which objectives within a unit a student needs to work on. Diagnostic-prescriptive instruments help prescribe specific pages in the appropriate instructional booklet. Each booklet contains two checkup tests that determine whether the student has mastered a particular objective. Finally, posttests determine the student's mastery of all the objectives in a unit. Each of the above tests is criterion referenced.

TIME REQUIREMENTS

IMM should be used daily for 45 to 60 minutes. Field test data indicate that a slightly above-average student will complete level I and level II in 1 school year.

IMPLEMENTATION PROCEDURES

IMM can be implemented in any kind of school setting and can easily be adapted to both specialized and self-contained school organizations. The only additional required equipment is shelving or storage space for the instructional booklets. The teacher training program is self-instructional and takes approximately 16 to 20 hours.

Summary Cost Information

The above-mentioned costs are based upon present limited reproduction facilities of the developer. It is expected that commercialization of the product will substantially reduce costs. The total estimated cost per student, with present production arrangements, is $35 per year. This price includes skill booklets, all evaluative measures, and all management forms necessary for operation of the program. The cost of the IMM teacher training package is estimated at $15 per teacher.

Personnel Required for Product Adoption and Implementation

Completion of the IMM teacher training package is required for implementation of the program. However, no other special qualificiations or training is necessary, and all teachers who desire to implement IMM in their classrooms should be able to do so. Also, no aide is required for implementation of the program.

ASSURANCES AND CLAIMS

Assurances

The IMM program, presently being developed, is being continuously revised in order to ascertain and assure its intrinsic quality.

The information obtained from a systems tryout evaluation of the program at two junior high schools indicates that IMM can be used satisfactorily without the developer's continuous assistance. When the teacher training unit revisions are completed, the IMM program is intended to be implemented and maintained by teachers without developer assistance.

The IMM materials in the final product will be free from social biases. Each piece of material is reviewed by both an in-house evaluation panel and outside experts in terms of sexism, racism, and other biases related to religion, age, and socioeconomic status stereotypes.

Each piece of the IMM materials and the instructional system were field tested over a 2-year period at 2 developmental schools involving more than 200 students. No harmful effects were observed by evaluators or developers, nor were any reported by the teachers using the program. These same teachers concluded that IMM is at least as effective as, if not more effective than, alternatives which had been used in their schools in prior years.

IMM materials are also carefully scrutinized by the committee for the protection of human subjects (Research for Better Schools, Inc., 1972) to certify that they are free from potential harmful effects and social biases.

Claims

IMM is an individualized and self-instructional middle school mathematics program whereby: Diagnostic criterion-referenced tests enable students to determine those concepts and skills they need to learn as well as to identify relevant instructional materials; the program design permits students to study at their own pace, to decide the order in which topic areas will be studied and to be selective in respect to optional special activities; IMM materials written in response-dominant mode are self-instructional and thereby permit the teacher to serve either as a tutor to individuals or to guide small-group activities; and the program design provides students the opportunity for self-management of learning and self-evaluation of their own achievements.

Comparison of criterion-referenced premeasures and postmeasures shows that students do, in fact, master the concepts and skills included in the IMM program. Field test results of students at two local schools show that students have exhibited considerable progress which, in many cases, was beyond the expectations of the teachers and developers. Teachers have indicated their satisfaction with the cognitive learning exhibited by their students and with the efficiency by which students learned. Teachers and students express very positive and enthusiastic attitudes toward the IMM program.

Field test results indicate that the IMM program can be managed by one teacher and appears to be adaptable to a variety of learning environments and student populations with virtually no changes of existing school resources.

Content validity of the IMM program has been established. An analysis by the developers of the content of nine junior high school mathematics text series and three standardized mathematics achievement tests provided the basic outline for the program. Reviews by outside experts and by the teachers using the program have established the instructional materials' intrinsic quality in such areas as accuracy, coverage, and quality of communication.

IMM is being developed on the basis of a successive approximation model, incorporating a four-stage evaluation and three-stage revision process. This process helps to insure that the development of the product meets design specification.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Skill booklets	80 per student (part I)	25.00*	Consumable	
	20 per student (part II)	5.00*		
Pretests and posttests	24 per student	4.00*	Consumable	
Prescription sheets and miscellaneous management forms	10 per student	.20*	Consumable	
Placement tests	2 per student	.80*	Consumable	
Teacher training materials	1 set per teacher	15.00*	Consumable	

*Approximate, based on estimates of cost to developer of reproducing prototype copies. Commercial production will reduce costs significantly.

Anna O. Graeber, Project Coordinator

AVAILABILITY

Revisions based on tryouts are completed for level I; revisions based on tryouts will be completed for level II by June 1975. Arrangements can be made to purchase copies of these level I and II materials from the developer for use in the 1975-76 school year. Final prepublication copies of all levels (I-IV) will be available by August 1977. An evaluation report on the effectiveness of IMM will be completed by November 1977.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 020 019

METRIC MEASUREMENT

An individualized program for students in grades 3-7 giving concrete experience in using the metric system

Metric Measurement is an instructional unit designed to give students concrete experiences with the use of measuring devices calibrated in metric units. The unit provides individualized instruction in metric measurement for students in grades 3-7. The students learn to measure length, volume, temperature, and mass, using the appropriate metric units. In each instance, they use measuring devices to make actual measurements. The students make measurements of length, width, and height, both of printed objects and of objects around the classroom; learn to measure volume by working with solids and liquids in various containers; measure mass with a balance and set of standard masses; and measure temperatures using a Celsius thermometer and containers of water. They also learn to record measurements, using abbreviations of the metric units.

The learning resources used in *Metric Measurement* include self-instructional lessons, read-along audiotapes, guided explorations in measurement, measuring games, project activities, and a sound filmstrip on the life and work of Joseph Louis Lagrange, one of the originators of the metric system.

Today's children will soon live in a world where butter is measured in kilos; gasoline, in liters; distances between cities, in kilometers; and air temperature, in degrees Celsius. To function in such a world, the individual must have a basic knowledge of the units of the metric system and must be able to make measurements using metric units.

SUBJECT AREA(S)

The subject areas are science and mathematics, specifically measuring in metric units and knowing the metric system.

INTENDED USERS AND BENEFICIARIES

Students of all abilities in grades 3-7.

GOAL(S) OR PURPOSE(S)

Metric Measurement is designed to teach the child: (1) To make measurements of length, volume, mass, and temperature using appropriate metric units and (2) to apply metric measurement skills in science investigations and practical situations.

PATTERNS OF USE

Metric Measurement is a self-contained instructional unit. All printed and manipulative materials are provided, and it is organized with a built-in learning management system that makes individualization of instruction possible.

The unit is divided into four instructional modules on measuring length, volume, mass, and temperature. The modules may be used in any order, but the lessons within each module are sequential. The guided explorations in measurement, project activities, and other learning resources may be used in any order.

The unit is suitable for either basic or supplementary instruction in metric measurement for grades 3-7.

ASSESSMENT PROVISIONS

Students take a pretest as they begin the unit. The pretest helps to determine in which of the four modules they should work. The lessons in each module contain self-assessment exercises. A posttest for the unit is also provided.

TIME REQUIREMENTS

The amount of time an individual student spends in the unit varies considerably, since the unit provides for varying rates of learning and for choices in the learning resources. On the average, however, the unit provides instruction for 20-25 class periods.

IMPLEMENTATION PROCEDURES

No special equipment, facilities, or organization is required. A comprehensive teacher's manual and a teacher training cassette tape accompany the unit.

ASSURANCES AND CLAIMS

Assurances

There is no evidence that *Metric Measurement*, when used as directed, induces physical, psychological, or social harm. It should be noted that many activities in the unit involve the use of apparatus and manipulatives by children, so that occasional minor mishaps should be expected. A few burned fingers were observed during prototype and field testing, but no incident was serious. Appropriate cautions about potential mishaps are contained in the directions of the student instructional materials.

There is no evidence that *Metric Measurement* perpetuates sexism, racism, or other biases related to religion, age, or socioeconomic stereotypes. These assurances are based upon critical examinations of the materials and on observations during their field testing.

The instructional materials of *Metric Measurement* were field tested apart from the developers' control in four schools at various grade levels. The developers also have no direct control over use of the commercial version of the unit, and at this writing (March 1975) approximately 800 copies of *Metric Measurement* have been marketed.

Claims

The instructional materials in *Metric Measurement* were originally developed for the Lagrange Unit of the *Individualized Science* (IS) program. For the commercial version of *Metric Measurement*, little was changed except the names of the unit and some learning resources. The same sequence of development used for all units of the IS program was also followed for this unit.

Each IS unit undergoes extensive formative evaluation. The science content is validated by a member of a panel of university scientists. Classroom testing of the materials takes place in two steps. A small-scale classroom test of prototype materials is carried out by the developers. Then a more comprehensive field test of materials is carried out by Research for Better Schools. After each of these classroom tests, revisions are made. (Further discussion of this process can be found in Audrey B. Champagne's and Leopold E. Klopfer's, "Formative Evaluation in Science Curriculum Development," *Journal of Research in Science Teaching*, 1974, 11, 185-203.)

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Classroom set, including booklets, read-along audiotapes, kits, central supply materials, activity cards, etc.; planning booklets and other consumable student paperwork for 30; teacher's manual	1 set per 30 students	450.00*	$2.00 yearly per 30 students	
Additional set of consumable student paperwork	1 set per 30 students	36.00	$36.00 yearly	
Cassette tape player	2 per classroom	25.00-40.00	Every 4 years	Any A-V supplier
35mm filmstrip viewer or projector	1 per classroom	30.00-55.00	Every 5 years	Any A-V supplier
Hotplate	1 per classroom	10.00-18.00	Every 5 years	
Set of spirit masters for consumable student paperwork	1 set per 250 students	4.95	$4.95 yearly	

*Set also available without read-along audiotapes at $329.00.

DEVELOPER/AUTHOR:

Learning Research and Development Center
University of Pittsburgh
Pittsburgh, Pa. 15260

AVAILABILITY

The complete unit has been published, and copyright is claimed from 1973 to 1984.

The distributor is:
Imperial International Learning Corp.
Box 548, Route 45 South
Kankakee, Ill. 60901

A program evaluation pack (containing a teacher's manual, sample lesson booklets, a kit of manipulatives, student paperwork, read-along tapes, and the Lagrange sound filmstrip) is available on loan from the distributor at no cost.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 020 020

INDIVIDUALIZED LEARNING FOR ADULTS - MATHEMATICS

A mathematics curriculum consisting of a carefully structured continuum of skills designed to lead to a 9th-grade mathematics skill level

Individualized Learning for Adults (*ILA*) *Mathematics* is an adult mathematics curriculum that consists of a carefully structured continuum of skills designed to lead the learner to an approximate 9th-grade mathematics skills level. It is appropriate for any young adult or adult learner whose functional level in mathematics skills is below 9th grade.

The program was developed in response to three major problems in Adult Basic Education (ABE) identified by the Nevada Department of Education in 1969. These were: (1) The large number of ABE dropouts, (2) the lack of appropriate instructional materials, and (3) the high mobility of the undereducated adult. Individualized instruction appeared to be a reasonable solution to all three problems. Therefore, *Individually Prescribed Instruction* (IPI), a program developed for and extensively disseminated to elementary school populations, was used as a model in developing ILA for use by adult learners.

The program is organized into five areas: Numeration/place value, addition/subtraction, multiplication/division, geometry/measurement, and applications. Within each area, performance objectives are divided into eight levels and arranged in ascending order of difficulty. There are 282 mathematics skill objectives.

The student's placement within the program is determined by a series of five placement tests. Pretests assess strengths and weaknesses within a given area. The student is given prescribed learning activities for each area comprised of 282 skill booklets, 1 for each skill objective. Each booklet contains two evaluative skill tests that monitor the student's progress through that particular objective. Mastery is determined by a posttest. Students work at their own pace and study only those objectives not previously mastered. The ILA teacher's primary responsibilities include: Managing the learning process, tutoring individuals and small groups, and serving as a resource person to the learner. To free the teacher from routine clerical tasks, developers recommend the use of an aide for noninstructional duties.

SUBJECT AREA(S)

Adult basic education—mathematics.

Numeration/place value, addition/subtraction, multiplication/division, geometry/measurement, and applications are the subject areas.

INTENDED USERS AND BENEFICIARIES

The program has been specially designed for adult and young adult learners who have not mastered the mathematics skills usually taught in grades 1 through 9 of the public schools.

GOAL(S) OR PURPOSE(S)

ILA seeks to improve the mathematics skills of undereducated adults and young adults through an individualized instructional system which emphasizes purposeful, self-directed learning. The learner completing the entire continuum will have an approximate 9th-grade mathematics skills level.

PATTERNS OF USE

The program can be used in essentially any Adult Basic Education (ABE) setting. Field testing has validated its use in ABE classes, secondary schools, and correctional institutions. ILA is largely self-managed and self-instructional. Developers encourage the use of supplementary materials when appropriate, but point out that the program is not amenable to substantive change.

ASSESSMENT PROVISIONS

The student's entry into the appropriate level of the program is determined by a series of five placement tests. Pretests, taken before work in a specific area is begun, measure the student's skills within that area. Skill tests embedded in the instructional booklets monitor progress toward objectives. Posttests measure the mastery of areas.

TIME REQUIREMENTS

The length of time required to complete the continuum will vary depending on the achievement and motivational level of the entering student.

IMPLEMENTATION PROCEDURES

The consumer who is comfortable with the use of performance objectives as guides to instruction and who is philosophically attuned to the values of individualization, should have no serious problem with implementing the program. If used with secondary students, parent awareness of the system and its objectives will facilitate implementation. The program is packaged for use as an instructional unit and requires minimum external assistance for successful implementation.

Summary Cost Information

The above costs are estimated for 50 students. Installation costs total $4,927.44. Average cost per student is $98.55 for total installation and $57.55 for the consumable materials. Consumable materials can be replaced at $0.02 per sheet.

Personnel Required for Product Adoption and Implementation

The program was intended for use with 1 teacher for every 20 students in instructional settings. Clerical support needs have been estimated at 1 clerk per approximately 100 students. Translating this into personnel (full-time equivalent) requires a determination of how much time each student will spend in the program.

ASSURANCES AND CLAIMS

Assurances

This product has been evaluated during use with over 400 secondary school students and approximately 300 prison inmates. In each case, the product functioned as a central element in a basic skills program. The assessment of results was conducted by an internal evaluation staff. Evaluation of the product in a secondary school setting was supervised by the National Institute of Education. This evaluation provided the most extensive source of data on the product. Evaluative evidence was gathered in a rigorous fashion using well-developed designs and instrumentation and, thus, may be accorded high credibility.

During the product's use in secondary school contexts, student achievement and attitudes in numerous areas were documented. Practitioners were also frequently consulted concerning the effects of the product on students. In no case were negative effects demonstrated. Thus, there has been no indication that the product induces or facilitates any type of harm.

To assure social fairness, product developers have critiqued their own work, National Institute of Education staff and consultants have reviewed the product, and mechanisms have been employed to obtain user feedback. These sources have not revealed any social bias or stereotyping inherent in the product.

Successful use of the product in a variety of settings has demonstrated its replicability and transportability. Instructional materials are available as a package. To date, technical assistance has been provided to users in implementation of the product. Some assistance from the developer is seen as desirable.

Claims

The major outcome claim made for the product is that it facilitates basic skills attainment. This claim has been supported by the evaluation of results from secondary students and prison inmates. In all cases, academic growth has been substantial and statistically significant during the course of product use. Comparative studies with other programs have been limited to date, but suggest that the product is at least as successful as other approaches.

The major process claim made for the product is that it allows students to progress at their own rates through materials which are perceived as beneficial and interesting. This claim was tested using student questionnaires and interviews. Students rated the product as above average on items relevant to this claim.

NUMBER SKILLS PARENT TEACHING PACKAGE

*A portable package designed to teach (individually)
children from grades K-3 to match, name, and
count the numbers 1-10*

Number Skills Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to teach the child to match, name, and count the numbers 1 through 10. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program (*Parent Teaching Package*) would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The ability to match, name, and count is a critical prerequisite skill to math computation skills. The need for this package is evident especially at the preschool and kindergarten levels.

In this package the student is required: To demonstrate the ability to match the numbers 1 through 10 on a number board without any errors (manual response—no verbal response necessary); name the numbers 1 through 10 aloud without any errors; and to count the numbers 1 through 10, in sequence, without any errors.

The parent begins by reading the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills. The parent begins each daily lesson by reading its general guidelines and setting up the number board and cards as indicated in the guidelines.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

SUBJECT AREA(S)

The subject area is mathematics; specifically, how to match, name, and count the numbers 1 through 10.

INTENDED USERS AND BENEFICIARIES

This package is intended for children in kindergarten to 3d grade who cannot match, name, or sequence the numbers 1 through 10.

This package is designed to be used by parents in the house on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to match, name, and count the numbers 1 through 10.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to match the number cards (1-10) on a number board. If the student makes no errors, the student is asked to name the numbers 1 through 10. Upon completing this part of the test correctly, the student is asked to count aloud the numbers 1 through 10. The student who does not obtain acceptable error criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the student progress sheet, which requires the parent to indicate with an "X" or a "/" whether the student did complete the lesson without any errors or whether it needs to be repeated in the next session. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the student progress record sheet is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Number Skills Parent Teaching Package* as itemized above is $2.25 (price subject to change). The package is completely reusable except for the progress sheets (which can be reproduced), the letter to the parent, and the evaluation form (which can also be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages*. At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Parent's manual	1	1.00	Reusable	
Number board (1-10)	1	.55	Reusable	
Set of number cards (1-10)	1	.50	Reusable	
Parent-teacher chart	1	.05	Consumable each time program is implemented	
Thermometer chart	1	.05	Same as above	
Evaluation form	1	.05	Same as above	
Letter to parent	1	.05	Same as above	

Note: All manuals and progress forms are good black-and-white copies; they can be reproduced by the teachers.

MATH COMBINATIONS – ADDITION PARENT TEACHING PACKAGE

A portable package designed to teach individual children answers to mathematics combination facts in addition

Math Combinations—Addition Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to provide practice in saying and writing spontaneously the correct answers to math combination facts in addition that the child knows and to teach answers to math combination facts in addition that the child does not know. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because there are many children having difficulty with computation skills. Being able to write and say the answers to math combination facts in addition quickly will make it easier for a child to do more difficult math problems quickly and accurately later on.

In this package, the student is required to respond to the visual image of the number combination by saying the answer to that number combination as quickly as the student can. The student is also required to write the answers to the number facts as quickly as it is possible to manually respond. As the lessons progress, the student is expected to increase the speed in saying and writing the answers to the combination facts in addition.

The parent begins by reading the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills. Afterwards, the parent administers the pretest to the child to determine which number combination facts in addition the child knows and which facts are not known. The parent then begins daily lessons using the stack of addition combination facts that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the following steps:

1. Saying and writing answers to combinations.
2. Practice in saying answers to combinations fast.
3. Practice in writing answers to combinations fast.
4. Daily timed test—saying answers fast.
5. Daily timed test—writing answers fast.

The lesson terminates in approximately 20 minutes, and at that time the parent and student record the seconds and number of answers, correct and incorrect, on the progress record form.

SUBJECT AREA(S)

The subject area is elementary level mathematics; specifically, memorizing, writing, and saying addition math combination facts automatically.

INTENDED USERS AND BENEFICIARIES

This package is for any elementary grade student who does not know how to say and write the answers to the addition math combination facts automatically.

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to say and write the answers to 100 addition math combination facts automatically when presented the visual number combination.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the *Math Combinations—Addition Parent Teaching Package*. The student is asked to write the answers to number combinations presented on a sheet of paper. The student who does not obtain acceptable error and time criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the progress record form, which requires the parent to record the seconds and the number of answers, correct and incorrect. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the progress record form is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Math Combinations—Addition Parent Teaching Package* as itemized above is $2 (price subject to change). The package is completely reusable except for the progress record form (which can be reproduced), the letter to the parent, and the evaluation form (which can also be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages*. MATH COMBINATIONS – SUBTRACTION PARENT TEACHING PACKAGE

A portable package designed to teach individual children answers to combination facts in subtraction

Math Combinations—Subtraction Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to provide practice in saying and writing spontaneously the correct answers to math combination facts in subtraction that the child knows and to teach answers to math combination facts in subtraction that the child does not know. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because there are many children having difficulty with computation skills. Being able to write and say the answers to math combination facts in subtraction quickly will make it easier for a child to do more difficult math problems quickly and accurately later on.

In this package, the student is required to respond to the visual image of the number combination by saying the answer to that number combination as quickly as the student can. The student is also required to write the answers to the number facts as quickly as it is possible to manually respond. As the lessons progress, the student is expected to increase the speed in saying and writing the answers to the combination facts in subtraction.

The parent begins by reading the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills. Afterwards, the parent administers the pretest to the child to determine which number combination facts in subtraction the child knows and which facts are not known. The parent then begins daily lessons using the stack of subtraction combination facts that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. RD 020 024

CARRYING AND BORROWING PARENT TEACHING PACKAGE

A package designed for individual instruction of elementary students in carrying and borrowing in addition and subtraction

Carrying and Borrowing Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to teach the child who needs instruction and practice how to carry and borrow in addition and subtraction. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program (*Parent Teaching Package*) would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The package is designed to meet the needs of those children experiencing difficulty in learning this process. The process of carrying and borrowing is critical to advanced computational skills.

In this package the student is required to say the answers to addition and subtraction math combination facts that are presented on cards and to read and write the answers to carrying problems in addition and to borrowing problems in subtraction. As the lessons progress, the student is expected to increase the speed with which the student says the combination facts and writes the answers to carrying and borrowing problems.

The parent begins by reading the *Parent's Direction Book*. The book trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills.

The parent administers the pretest to the student to determine whether this is the appropriate package for the student. The pretest measures the student's knowledge of addition and subtraction math combination facts. If the student passes the pretest, the parent then begins daily lessons.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the following steps:

1. Daily math combinations review (in addition and subtraction combination facts),
2. Parent and student recording of step 1 results by marking the seconds and correct/incorrect answers given on the record sheet,
3. Teaching carrying and borrowing,
4. Independent practice,
5. Parent and student recording of step 4 results by marking the seconds and correct/incorrect answers given to carrying and borrowing problems on the independent practice sheet.

SUBJECT AREA(S)

The subject area is elementary level mathematics; specifically, how to respond automatically to the math combination facts in addition and subtraction and increase the speed with which the child is able to compute problems in carrying and borrowing.

INTENDED USERS AND BENEFICIARIES

This package is for any student in the elementary grades who does not know how to carry and borrow in addition and subtraction.

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to carry and borrow in addition and subtraction.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to answer problems in carrying and borrowing presented on a sheet of paper. The student who does not obtain acceptable error and time criteria is placed in the package.

Student progress is recorded at the completion of step 1 in a daily lesson on "Record Sheet: Part 1. Daily Math Combinations Review." Progress is also recorded at the end of step 4 in a daily lesson on "Independent Practice Sheet—Part 4."

This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the progress sheets are sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Carrying and Borrowing Parent Teaching Package* as itemized above is $3.75 (price subject to change). The package is completely reusable except for the progress sheets, pretest (which can be reproduced), the letter to the parent, and the evaluation form (which also can be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages.* At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

MATH COMBINATIONS - MULTIPLICATION PARENT TEACHING PACKAGE

A portable package designed to teach individual children answers to combination facts in multiplication

Math Combinations—Multiplication Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to provide practice in saying and writing spontaneously the correct answers to math combination facts in multiplication that the child knows and to teach answers to math combination facts in multiplication that the child does not know. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because there are many children having difficulty with computation skills. Being able to write and say the answers to math combination facts in multiplication quickly will make it easier for a child to do more difficult math problems quickly and accurately later on.

In this package, the student is required to respond to the visual image of the number combination by saying the answer to that number combination as quickly as the student can. The student is also required to write the answers to the number facts as quickly as it is possible to manually respond. As the lessons progress, the student is expected to increase the speed in saying and writing the answers to the combination facts in multiplication.

The parent begins by reading the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills. Afterwards, the parent administers the pretest to the child to determine which number combination facts in multiplication the child knows and which facts are not known. The parent then begins daily lessons using the stack of multiplication combination facts that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the following steps:

1. Saying and writing answers to combinations,
2. Practice in saying answers to combinations fast,
3. Practice in writing answers to combinations fast,
4. Daily timed test—saying answers fast,
5. Daily timed test—writing answers fast.

The lesson terminates in approximately 20 minutes, and at that time the parent and student record the seconds and number of answers, correct and incorrect, on the progress record form.

RD 020 025

SUBJECT AREA(S)

The subject area is elementary level mathematics; specifically, memorizing, writing, and saying multiplication math combination facts automatically.

INTENDED USERS AND BENEFICIARIES

This package is for any elementary grade student who does not know how to say and write the answers to the multiplication math combination facts automatically.

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to say and write the answers to 100 multiplication math combination facts automatically when presented the visual number combination.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the *Math Combinations—Multiplication Parent Teaching Package*. The student is asked to write the answers to number combinations presented on a sheet of paper. The student who does not obtain acceptable error and time criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the progress record form, which requires the parent to record the seconds and the number of answers, correct and incorrect. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the progress record form is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Math Combinations—Multiplication Parent Teaching Package* as itemized above is $2 (price subject to change). The package is completely reusable except for the progress record form (which can be reproduced), the letter to the parent, and the evaluation form (which can also be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages*. At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Parent's manual	1	1.00	Reusable	
Set of 100 multiplication math combination cards	1	.85	Reusable	
Progress record form	1	.05	Consumable each time program is implemented	
Letter to parent	1	.05	Same as above	
Evaluation form	1	.05	Same as above	

Note: All manuals and progress forms are good black-and-white copies; hence, they can be reproduced by the teachers.

MATH COMBINATIONS – DIVISION
PARENT TEACHING PACKAGE

A portable package designed to teach individual children answers to mathematics combination facts in division

Math Combinations—Division Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to provide practice in saying and writing spontaneously the correct answers to math combination facts in division that the child knows and to teach answers to math combination facts in division that the child does not know. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because there are many children having difficulty with computation skills. Being able to write and say the answers to math combination facts in division quickly will make it easier for a child to do more difficult math problems quickly and accurately later on.

In this package, the student is required to respond to the visual image of the number combination by saying the answer to that number combination as quickly as the student can. The student is also required to write the answers to the number facts as quickly as it is possible to manually respond. As the lessons progress, the student is expected to increase the speed in saying and writing the answers to the combination facts in division.

The parent begins by reading the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills. Afterwards, the parent administers the pretest to the child to determine which number combination facts in division the child knows and which facts are not known. The parent then begins daily lessons using the stack of division combination facts that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. TIME TELLING PARENT TEACHING PACKAGE

A portable package designed to teach individual children how to tell time to the nearest minute

Time Telling Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to teach the child to tell time to the nearest minute using the "2:45" method. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program (*Parent Teaching Package*) would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

Time telling is a critical social skill. This package was designed to meet the need of teaching children to tell time correctly. This package is a highly programed learning sequence in which the student is required to respond by writing the correct answer for each frame in the student book. The student then checks the answer by pulling down a slider which has been covering the answer. If the student's answer corresponds with the answer in the answer column, the student continues to the next frame. If the student makes an error, the wrong answer is changed to the correct one and the student continues to the next frame.

The parent begins by reading the parent's manual. The manual presents an overview of the program and what the parent needs to know before daily lessons can begin. The parent then reads the complete "Parent's Key to Book A," which trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual, parent keys, and student books are the total training components for both parent and child.

The parent begins by teaching the student how to check the answers. The core of the daily lesson consists of the following steps:

1. Teach the lesson (the student writes the answers to the practice exercises in the student book as the parent follows the parent's key).
2. The student completes the review test.
3. If the student passes the test, the student then records the progress made on the thermometer chart. If the child does not pass the test, then the practice exercises are repeated.
4. Record successful/unsuccessful score on the parent-teacher chart.

SUBJECT AREA(S)

The subject area is telling time; specifically, how to read the time from a clock to the nearest minute.

INTENDED USERS AND BENEFICIARIES

This package is for any student in the elementary grades who does not know how to tell time to the nearest minute.

RD 020 027

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to tell time to the nearest minute using the "2:45" method.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to place the numbers correctly on a blank clock and to write the correct time of several clocks. The student who does not obtain acceptable error and time criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the parent-teacher chart. This requires the parent to indicate whether the student passed or failed the review test. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the parent-teacher chart is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Time Telling Parent Teaching Package* as itemized is $5 (price subject to change). The package is completely reusable except for the items indicated as consumable once the program is implemented.

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program and follow the Parent Keys.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages.* At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

RD 020 028

ELEMENTARY ARITHMETIC DIAGNOSTIC TESTING PACKAGE

Computer-assisted package for evaluating the mathematics achievement of students in grades 3-6

The *Elementary Arithmetic Diagnostic Testing Package* is a set of computer programs that can be used to generate pretests, curriculum-embedded tests (CET's), posttests, and exercise pages to accompany individualized instructional programs in mathematics.

The programs are currently capable of providing tests and exercise pages for mathematical operations at a level of difficulty found in 4th- and 5th-grade mathematics curriculums. They are directly keyed to level E of the commercially available individually prescribed instruction (IPI) mathematics program.

The *Elementary Arithmetic Diagnostic Testing Package* was designed for online testing using hard-copy computer terminals. The programs generate test items and provide space for any calculations that need to be made. Students enter their response by typing the response through the terminal keyboard. The computer checks the accuracy of the response, accumulates test scores, and makes decisions concerning mastery status of the student, based on the Wald sequential probability ratio test. At the end of each test, a summary of test results is printed for purposes of prescribing the next objective on which a student should begin work.

SUBJECT AREA(S)

Testing mastery of elementary grade mathematics learning objectives at about the 4th- or 5th-grade level in the areas of numeration/place value, addition/subtraction, multiplication, division, and fractions (corresponding to certain portions of level E in IPI Math) is the subject of this package.

INTENDED USERS AND BENEFICIARIES

This package was designed for students in grades 3 to 6 who are studying objectives similar to those of level E in IPI Math. In addition to using it as a testing device, exercise pages can be generated as an instructional supplement.

GOAL(S) OR PURPOSE(S)

The purpose of these programs is: (1) To measure student achievement, (2) to diagnose student weaknessess, and (3) to provide exercise pages for additional practice.

PATTERNS OF USE

Computer tests exist for pretesting, curriculum-embedded testing (CET), and posttesting. Pretests and posttests cover all the skills in a unit and assist the student and/or teacher in deciding which objectives have been mastered and which should be studied next. CET's are single-skill tests which assess mastery after study of one skill.

ASSESSMENT PROVISIONS

This package of computer programs is a testing device designed for measurement purposes.

TIME REQUIREMENTS

The time required for each test varies according to the skill of the student. In general the student should be able to complete a pretest or posttest in 45 minutes. If the student cannot complete a pretest or posttest within a period, the student may return the second day and continue testing. The student is usually able to complete one CET in 15 minutes.

IMPLEMENTATION PROCEDURES

To use the *Elementary Arithmetic Diagnostic Testing Package*, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. Online testing also requires the use of hard copy terminals. Since some hard-copy terminals may be noisy, a special room may be required to house them.

Training teachers to use this package is minimal with respect to time and difficulty. It usually requires only 2 hours of demonstration to show a teacher how the package and the manual may be used. For a student who has never used a terminal, approximately 30 minutes of demonstration and practice are required for the student to become familiar with the keyboard. No other organizational changes are necessary for implementing the package.

Personnel Required for Product Adoption and Implementation

An expert computer programer is required initially to adapt and to implement this package. Teacher orientation for use of the programs is available from the developer.

ASSURANCES AND CLAIMS

Assurances

The *Elementary Arithmetic Diagnostic Testing Package* has been used in one school with approximately 360 students. Under the guidance of the professional staff, empirical data concerning cognitive and affective learning have been collected and evaluated. Thus far, there has been no negative impact as a result of using this package, either in students' learning processes or in students' interest in learning mathematics. Furthermore, the program contains nothing that could be construed as demonstrating racial, ethnic, or sexual bias.

The package is designed to be transportable and, once initial adaption and orientation have been accomplished, no further implementation assistance should be necessary from the developer.

Claims

Empirical data have shown: (1) When using computer tests, testing time can be reduced substantially without sacrificing the validity of the master decision; and (2) the students involved with computer testing have demonstrated more positive attitudes toward learning mathematics, especially toward computer testing of mathematics. These claims are based on a small-scale study which compared attitudes and performance of students tested with paper-and-pencil methods with students tested using the computer package.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

RD 020 029

SWRL LEARNING MASTERY SYSTEM (LMS) FOR ADDISON WESLEY MATHEMATICS

A program which augments the effectiveness of the Addison-Wesley Program for grades 1-6

The *SWRL Learning Mastery System for Addison-Wesley Mathematics* is a set of text-referenced materials and procedures designed to assist teachers in enhancing the effectiveness of the Addison-Wesley Mathematics Program. The systematic approach to the management of instruction provided by the Learning Mastery System (LMS) does not alter the structure and content of the mathematics program; rather, it insures that all program outcomes receive adequate attention. LMS has been developed to accompany grades 1-6 of the Addison-Wesley mathematics program. LMS organizes the mathematics content of each Addison-Wesley mathematics text into sequenced and easily managed units.

LMS increases the effectiveness of the Addison-Wesley Mathematics Program by helping teachers perform three important functions:

1. Identifying explicitly what pupils are to learn. LMS lists the specific learning outcomes that the Addison-Wesley program is designed to promote.

2. Determining when the intended learning has occurred. Periodic assessment enables the teacher to identify pupils who have acquired the learning outcomes and those who need additional instruction.

3. Providing appropriate additional instruction. LMS materials and procedures enable the teacher to furnish pupils with the additional instruction and practice appropriate to their needs.

LMS helps teachers and pupils obtain greater instructional benefits from a program. By identifying outcomes, it insures that no facet of instruction is overlooked. By assessing achievement, it helps the teacher determine which pupils are ready to move ahead in instruction, and it helps identify those pupils who need additional help with specific skills. By providing supplementary exercises, it insures that additional practice is suited to each pupil's specific needs.

SUBJECT AREA(S)

LMS assesses the specific outcomes of the 1973 edition of Addison-Wesley's *Investigating School Mathematics*.

INTENDED USERS AND BENEFICIARIES

The system was developed for all elementary students using Addison-Wesley's *Investigating School Mathematics*.

GOAL(S) OR PURPOSE(S)

LMS helps the teacher: (1) To identify explicitly what the children are to learn from the Addison-Wesley *Investigating School Mathematics* series, (2) to determine when the intended learning has taken place, and (3) to provide appropriate supplementary instruction.

PATTERNS OF USE

Teachers perform the following sequence of activities in using LMS:

Refer to the activities and materials guide. The teacher begins instruction for each LMS unit by referring to the activities and Materials Guide for the unit. Activities and materials guides are convenient reference tools for all LMS unit information.

Conduct unit instruction. Using the Addison-Wesley materials, the teacher conducts instruction, emphasizing outcomes identified on the activities and materials guide.

Assess pupil skills. After completing the Addison-Wesley mathematics instruction for each LMS unit, a criterion exercise is administered to assess pupil achievement of the skills taught in that unit.

Provide supplementary instruction. Based on pupil criterion exercise results, additional instruction is assigned. Review/supplemental activities are provided for use with pupils whose scores indicate a need for review and practice with fundamental concepts taught in the unit. Extension activities are assigned to those pupils whose scores indicate satisfactory attainment of unit concepts and skills. These activities provide advanced work related to the unit outcomes.

ASSESSMENT PROVISIONS

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific mathematics program skills. Practice exercises for review or extension exercises for extended instruction in a skill are assigned on the basis of each child's criterion exercise scores.

The LMS Quality Assurance (QA) system includes the resources to identify and report instructional accomplishments attained during LMS use. This information provides a basis for instructional planning by teachers and administrators. The QA system also provides a means by which pupil proficiency, attained with the instructional program, can be credited in a manner that is understandable by parents and others interested in education.

TIME REQUIREMENTS

The total time required for both end-of-unit assessment and supplementary instruction is generally 1 or 2 class periods, 8 to 10 times during the school year.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the LMS efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training that is required, to use the programs effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the installation system are materials for performing administrative functions related to LMS; for example, suggestions for ordering and distributing materials, monitoring the operation of the system during the school year, and integrating the system with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The product materials and procedures have been designed for convenient use by the teacher. There are no requirements for specialized personnel. During tryouts involving over 2,500 classrooms and 88,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in such areas as sexual stereotyping, cultural and racial diversity, dangerous substances, and religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products, and the criteria against which the instructional product has been evaluated during development, provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as "Quality Assurance" (QA) has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and are available for sharing with parents. This information has proved especially useful in furthering parent/school communication and in fostering parental support.

SWRL LEARNING MASTERY SYSTEM HOUGHTON MIFFLIN MATHEMATICS

A program which augments the effectiveness of the Houghton Mifflin Mathematics Program for grades 1-6

The *SWRL Learning Mastery System for Houghton Mifflin Mathematics* is a set of text-referenced materials and procedures designed to assist teachers in enhancing the effectiveness of the Houghton Mifflin Mathematics Program. The systematic approach to the management of instruction provided by the learning mastery system (LMS) does not alter the structure and content of the mathematics program; rather, it insures that all program outcomes receive adequate attention. LMS has been developed to accompany grades 1-6 of the Houghton Mifflin Mathematics Program. LMS organizes the mathematics content of each Houghton Mifflin mathematics text into sequenced and easily managed units.

LMS increases the effectiveness of the Houghton Mifflin Mathematics Program by helping teachers perform three important functions:

1. Identifying explicitly what pupils are to learn. LMS lists the specific learning outcomes that the Houghton Mifflin program is designed to promote.

2. Determining when the intended learning has occurred. Periodic assessment enables the teacher to identify pupils who have acquired the learning outcomes and those who need additional instruction.

3. Providing appropriate additional instruction. LMS materials and procedures enable the teacher to furnish pupils with the additional instruction and practice appropriate to their needs.

LMS helps teachers and pupils obtain greater instructional benefits from a program. By identifying outcomes, it insures that no facet of instruction is overlooked. By assessing achievement, it helps the teacher determine which pupils are ready to move ahead in instruction, and it helps identify those pupils who need additional help with specific skills. By providing supplementary exercises, it insures that additional practice is suited to each pupil's specific needs.

SUBJECT AREA(S)

LMS assesses the specific outcomes of Houghton Mifflin's *Modern School Mathematics*. LMS is available to accompany the 1967 and 1972 editions of *Modern School Mathematics*. LMS for the 1967 edition can also be used with the 1970 edition, which was published in California.

INTENDED USERS AND BENEFICIARIES

The system was developed for all elementary students using Houghton Mifflin's *Modern School Mathematics*.

GOAL(S) OR PURPOSE(S)

LMS helps the teacher: (1) To identify explicitly what the children are to learn from the Houghton Mifflin *Modern School Mathematics* series, (2) to determine when the intended learning has taken place, and (3) to provide appropriate supplementary instruction.

PATTERNS OF USE

Teachers perform the following sequence of activities in using LMS:

Refer to the activities and materials guide. The teacher begins instruction for each LMS unit by referring to the activities and materials guide for the unit. Activities and materials guides are convenient reference tools for all LMS unit information.

Conduct unit instruction. Using the Houghton Mifflin materials, the teacher conducts instruction, emphasizing outcomes identified on the activities and materials guide.

Assess pupil skills. After completing the Houghton Mifflin mathematics instruction for each LMS unit, a criterion exercise is administered to assess pupil achievement of the skills taught in that unit.

Provide supplementary instruction. Based on pupil criterion exercise results, additional instruction is assigned. Review/supplemental activities are provided for use with pupils whose scores indicate a need for review and practice with fundamental concepts taught in the unit. Extension activities are assigned to those pupils whose scores indicate satisfactory attainment of unit concepts and skills. These activities provide advanced work related to the unit outcomes.

ASSESSMENT PROVISIONS

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific mathematics program skills. Practice exercises for review or extension exercises for extended instruction in a skill are assigned on the basis of each child's criterion exercise scores.

The LMS Quality Assurance (QA) System includes the resources to identify and report instructional accomplishments attained during LMS use. This information provides a basis for instructional planning by teachers and administrators. The QA system also provides a means by which pupil proficiency, attained with the instructional program, can be credited in a manner that is understandable by parents and others interested in education.

TIME REQUIREMENTS

The total time required for both end-of-unit assessment and supplementary instruction is generally 1 or 2 class periods, 8 to 10 times during the school year.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the LMS efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training that is required, to use the programs effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the installation system are materials for performing administrative functions related to LMS; for example, suggestions for ordering and distributing materials, monitoring the operation of the system during the school year, and integrating the system with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The product materials and procedures have been designed for convenient use by the teacher. There are no requirements for specialized personnel. During tryouts involving over 2,500 classrooms and 88,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in such areas as sexual stereotyping, cultural and racial diversity, dangerous substances, and religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products, and the criteria against which the instructional product has been evaluated during development, provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions apart from SWRL a set of procedures referred to as "Quality Assurance" (QA) has been developed. As the tryout monitoring procedures did for the SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and are available for sharing with parents. This information has proved especially useful in furthering parent/school communication and in fostering parental support.

SWRL PROFICIENCY VERIFICATION SYSTEM: MATH

A testing program to be used in connection with 10 widely used mathematics text series

The *SWRL Proficiency Verification System* (PVS) can be most expeditiously described in terms of the situation in which it will operate. The situation is typical in the schools of the Nation at the present time. An educational agency—a school district most likely, but possibly a State or a subunit within a district—has adopted two or more text series from which education units may "subadopt" as a basis for instruction. The agency wishes to credit the instructional accomplishments attained by students and teachers with these series and to convey such information in forms that are understandable and useful to school personnel and also to parents through the teacher and to the community through district officials. The agency also wishes to obtain information for instructional planning purposes regarding the differences in accomplishments with the different series being used within the agency. However, it is immediately within reach of, if not within, the state of the art of educational research and development to satisfy.

The *SWRL Proficiency Verification System: Mathematics* is initially being developed to operate in connection with all, or a subset of, 10 widely used mathematics text series. PVS operates as follows: Each participating agency indicates the number of students and school location, and instructional placement of students for each series in use. PVS resources provide text-referenced assessment measures for administration by teachers approximately four times a year, depending on instructional pacing. PVS generates reports for teachers, principals, and district officials crediting instructional accomplishments and summarizing instructional planning data.

PVS resources include operating guides, text-referenced proficiency verification booklets for students, and interpretation guides.

SUBJECT AREA(S)

The subject area is mathematics.

INTENDED USERS AND BENEFICIARIES

PVS is being developed for use with all students involved in instruction with the set of instructional products defined by the text series. It is being field tested with a range of different educational situations. PVS provides an operational mechanism for involving parents and community advisory groups as users and beneficiaries of instructional planning information with the professional guidance of educational personnel.

GOAL(S) OR PURPOSE(S)

Agencies participating in PVS receive organized and interpretable information regarding instructional accomplishments. The information is referenced to the specific instructional products that have been procured to provide resources for school personnel to equip students with mathematics proficiency.

PATTERNS OF USE

PVS assessment measures are referenced to text resources. Thus, PVS is adaptive to the instructional pace at the student, teacher, school, and district levels. An important feature of PVS is that the reports yield systematic information on proficiency rate as well as proficiency substance.

ASSESSMENT PROVISIONS

Assessment is the nuclear core of PVS. The assessment, however, does not reference either abstract "criteria" or "people as products." Rather, it references the instructional products that school personnel use as resources to attain mathematics proficiency criteria with individual students.

TIME REQUIREMENTS

PVS augments regular classroom instruction. Typically, during the course of 1 academic year, it requires about 2 hours of student time. Special teacher time for PVS operations is negligible. The greatest segment of professional time is devoted to the use of the PVS reports in instructional planning. This time allocation is at the professional discretion of the report recipients.

IMPLEMENTATION PROCEDURES

A comprehensive, self-contained training system is provided. The training system enables district supervisors to assume all responsibility for training teachers and other school personnel in the use of PVS and to conduct this training within the time conventionally available to school personnel.

Installation system materials facilitate the performance of administrative functions related to PVS, for example, suggestions for conducting briefing sessions for school boards, parents, and community members; monitoring the operation of PVS during the school year; reporting pupil proficiency to parents and others interested in the schools; and conducting between-program comparisons.

ASSURANCES AND CLAIMS

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During development, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema and has served to assure user acceptability and product transportability.

The product does not appear to possess bias or imbalance in such areas as sexual stereotyping, cultural and racial diversity, dangerous substances, and religion.

MATERIALS AND EQUIPMENT

CURRICULUM DEVELOPMENT IN ELEMENTARY MATHEMATICS: NINE PROGRAMS

Descriptions of nine mathematics programs that grew from the education reform efforts of the 1950's

Curriculum Development in Elementary Mathematics: Nine Programs describes and analyzes nine major mathematics programs that grew from Government-financed educational reform efforts that began in the 1950's. Eight of the reports probe American curriculums developed with funding from the Office of Education, the National Institute of Education, or the National Science Foundation. The ninth looks at mathematics reform in the United Kingdom undertaken by the Nuffield Foundation and the National Schools Council.

The introduction discusses the impact of the new mathematics, the importance of inservice training for teachers, and differing educational philosophies and approaches taken by mathematics curriculum developers. Each report begins with statements of the goals and theoretical foundations of the curriculum and then details its mathematics content, teaching strategy, implementation, history of development, and evaluation results. Summary sections at the beginning of each report provide thumbnail descriptions and basic information about content, style, and availability. The book as a whole provides case studies of the research and development process of curriculum development in mathematics; it is not intended to be a comprehensive directory of mathematics programs.

SUBJECT AREA(S)

The subject area is elementary mathematics curriculums.

INTENDED USERS AND BENEFICIARIES

The book is intended to provide school people who make mathematics curriculum decisions with a framework for judging the appropriateness of mathematics programs for their special needs and contexts. The book is also addressed to those who develop new curriculums.

GOAL(S) OR PURPOSE(S)

The book is not intended to give school superintendents, mathematics curriculum specialists, or the classroom teacher a Government-certified, guaranteed, fail-proof elementary mathematics program. It is intended to help school people in the selection of programs that will meet their own educational goals for children and to fit their own assessment of their children's needs in mathematics, their district's resources, and their beliefs about how children and teachers learn.

PATTERNS OF USE

This book serves as a background and reference document for school people involved in selecting elementary mathematics curriculums.

GOING METRIC: AN ANALYSIS OF EXPERIENCES IN FIVE NATIONS AND THEIR IMPLICATIONS FOR U.S. EDUCATIONAL PLANNING

A report to help planners and policymakers benefit from the metrication experiences of other countries

The United States is approaching total commitment to "going metric." This pervasive change will present substantial education and training problems. We are in a unique position to make effective and timely use of the metric conversion experiences now occurring in five other countries: The United Kingdom, Australia, South Africa, New Zealand, and Canada.

In the final report for this project, the approach to metrication in each of the five target countries is documented. Techniques of teacher and student training in the metric system and major areas of instructional materials development activity are discussed. Problem areas in metric education are identified. These include resistance to change, inadequate materials, equipment conversion, teacher training, vocational training, communication and coordination, and policy and schedule difficulties. In addition, special problems in the instruction and use of the metric system and the coping strategies used overseas are described. How respondents in each country would change their approach to metrication, if they had the opportunity, is also summarized. Finally, nine major recommendations for how these experiences of other countries can be utilized by the United States are presented.

SUBJECT AREA(S)

Mathematics and Science

General background information and guidelines for policymakers and educators in planning metric education programs and strategies are discussed. Topics include: Early history of metric conversion, recent U.S. experience, and a discussion of the impact of metric conversion on educational practices; an overview of metrication in the United Kingdom, Australia, South Africa, New Zealand, and Canada; findings, presented in terms of overseas experience in teacher training, instructional strategies, and major areas of instructional materials development in the metric system; and problem areas in the planning, design and implementation of metric education programs, along with solutions identified overseas and implications for United States educators.

INTENDED USERS AND BENEFICIARIES

The primary intended users are education policymakers, planners, and program designers at the Federal, State, and local school district levels. School principals and teachers in all subject areas will be assisted in their metric curriculum development activities, as well as individuals concerned with adult education and vocational/technical education (e.g., home economics, agriculture, and industrial training). Ultimately, the students and the adult community will benefit from a well-designed system of metric education in all areas of society.

GOAL(S) OR PURPOSE(S)

The major goals are to assist individuals in their efforts: (1) To develop comprehensive policies which will minimize the human problems of metrication, (2) to plan effective metric education programs for both adults and children, (3) to learn from the experiences of other English-speaking countries currently undergoing metrication and (4) to be aware of the potential contribution that educators and school systems can make to a national metrication program.

PATTERNS OF USE

There are no restrictions on usage. Portions of the report, as well as the bibliography, can appropriately be included in background courses in metric awareness for teachers and administrators.

ASSESSMENT PROVISIONS

No provisions are made for evaluation of learning achievement.

TIME REQUIREMENTS

Time requirements are dependent on the individual's reading 125 pages of text.

IMPLEMENTATION PROCEDURES

No special procedures are required.

ASSURANCES AND CLAIMS

No indications have been received to indicate that the product induces harm or that it perpetuates racial, religious, or any other social biases. Based on informal feedback from users, the product can stand alone and does not require intervention by the developer.

METRIC IN-SERVICE TEACHER TRAINING: LEARNING FROM THE ENGLISH AND AUSTRALIAN EXPERIENCE

A report which offers recommendations to assist in the planning of metric teacher-training programs

To gather information for assisting teachers and administrators charged with the responsibility for inservice training, AIR undertook a study of metric inservice training experiences in England and Australia.

In the final report, various approaches to metric inservice training in England and Australia are described. Organization, planning, training strategies, and teaching materials are reviewed. Specific problems impacting on teacher training in England and Australia at the elementary and secondary levels are identified. Proposed solutions are discussed. A total of 13 recommendations is offered to teachers and administrators to assist in the planning and design of metric inservice teacher training programs in the United States.

SUBJECT AREA(S)

Teacher training concerns in England and Australia and their implications for inservice teacher training in the United States. Specific topics include: (1) Review of data-collection procedures through the use of an interview guide and the use of an overseas information network; (2) characteristics of metric teacher training, teacher training problems, and general views of respondents in England; (3) characteristics of metric teacher training, teacher training problems, and summary of teacher training efforts in Australia; and (4) implications for U.S. metric teacher training with specific recommendations for policymakers, administrators, and teachers involved in planning metric education.

INTENDED USERS AND BENEFICIARIES

The report is intended for individuals in Federal, State, and local educational agencies concerned with the planning and design of teacher inservice training programs. Ultimately, the students should benefit from better designed inservice training programs.

GOAL(S) OR PURPOSE(S)

The goals of this product are: To assist in the overall planning and design of teacher inservice programs so that the teachers benefit from the experiences of two countries which have accomplished most of their metric inservice training of elementary and secondary schoolteachers.

PATTERNS OF USE

There are no restrictions of product use; only the reading of the final report is required.

ASSESSMENT PROVISIONS

No assessment provisions are required.

TIME REQUIREMENTS

The only time required is that for reading the project final report.

IMPLEMENTATION PROCEDURES

No special procedures are required.

ASSURANCES AND CLAIMS

This product has not been distributed as yet, but review of the draft by the NIE project officer and four independent reviewers has not indicated any likelihood of harm or any evidence of social bias.

MINICOURSE 5: INDIVIDUALIZING INSTRUCTION IN MATHEMATICS

A program to help 4th- to 6th-grade teachers improve their skills in tutoring mathematics students

Individualizing Instruction in Mathematics is one of a series of minicourses developed by the Far West Laboratory for Educational Research and Development. The minicourses are based on the Stanford microteaching program. This is a self-contained inservice or preservice program to help teachers improve their skills in tutoring math students by improving one teaching skill at a time. In the typical self-instructional sequence, a teacher reviews an instructional and model lesson film, then plans and conducts two brief 10-20-minute tutoring sessions which are recorded. The teacher then plays back the recording and evaluates use of the skills. One or two days later, the teacher conducts two more brief tutoring sessions, and after evaluating recordings of these sessions to assure mastery of the skills, goes on to the next skill.

SUBJECT AREA(S)

Inservice or preservice teacher-training program to learn to conduct effective tutoring sessions with elementary school mathematics students is the subject area.

INTENDED USERS AND BENEFICIARIES

The minicourse was designed for teachers in grades 4-6, but has proven effective for teachers in grades 1-7. The skills would be of use to teachers of individualized and traditional mathematics programs.

GOAL(S) OR PURPOSE(S)

Trainees will learn to conduct effective tutoring sessions by using skills in math tutoring: Verbal praise, asking diagnostic questions, demonstrating mathematics skills and concepts, using evaluation examples to check student learning, and assigning practice examples to consolidate student learning.

PATTERNS OF USE

Minicourse 5 is an autoinstructional package. It consists of a teacher's handbook, a coordinator's handbook, and a package of nine reels of 16mm color film with instructional and model lessons. The handbook and film are interdependent, and lessons should be taken sequentially.

ASSESSMENT PROVISIONS

Minicourse 5 is autoinstructional. Teachers evaluate their own performance, as there are no provisions for evaluation by anyone else.

TIME REQUIREMENTS

Approximately 1 hour per day for 13 days is required.

IMPLEMENTATION PROCEDURES

The coordinator should arrange for facilities to show the instructional/model films to participating teachers. A room with the video taping equipment and seating for the teacher and four to five students should be set up and made available for microteaching.

The coordinator schedules participating teachers to use the microteaching room and should arrange for someone to relieve the teachers from regular classroom duties during microteaching.

Summary Cost Information

Initial cost to the user includes the purchase of the instructional films. The coordinator's handbook may be reused. Each teacher taking the course will require a handbook, as consumable evaluation forms and checklists are provided therein. Initially the school or district should provide a 20-minute blank video tape to be used by each teacher for microteaching and evaluation. These tapes can be reused by teachers taking the course later.

The minicourses are designed to be used with video tape equipment so that teachers can see themselves perform. However, this minicourse can use a regular audiotape recorder instead of the video taping equipment. Through field testing, the Far West Laboratory discovered that for this particular course, the use of tape recordings proved as effective as video tapes. Because of this, the program may be used by districts for whom the purchase of a video taping system would be a financial burden.

Personnel Required for Product Adoption and Implementation

A coordinator recruits teachers to take the course, introduces the course and methods to the teachers, sets up the course schedule, and maintains the video tape equipment. Any staff member could fill this role, but it is usually filled by a principal or district supervisor.

ASSURANCES AND CLAIMS

Minicourse 5 was field tested 3 times with a total of 346 teachers in grades 3-6. The course has also been used by a large school district in California. Conversations with independent teachers who have taken *Minicourse 5* indicates that the materials are effective as presented and are not harmful either to teachers or pupils.

Teachers made major gains in use of verbal praise, diagnostic questions, and demonstration techniques such as expanded notation, number line, estimation, and drawing pictures to illustrate problems and improved in assigning practice examples to reinforce learning. These changes in teacher behavior were consistent under various methods of using the course, and the behaviors have proved replicable.

The preliminary form of the course was developed after careful search of the literature on tutoring. Intensive classroom observations revealed areas needing skill development. After testing the preliminary form of the course with 7 teachers, revisions were made and the main field test was conducted with 49 teachers in 3 predominantly middle-class school districts. Results of effectiveness in learning mathematics tutoring skills are based upon results of this main field test. After further course revisions, the minicourse was put through an operational field test with 290 teachers. The operational field test is conducted without participation by the developer to insure that the course can be used independently, thus assuring its transportability and replicability.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Instructional/model films	1 set	1,600.00*	Reusable	
Teacher's handbook	1 per teacher	3.00	Not reusable	
Coordinator's handbook	1	4.00	Reusable	
20-minute video tape	1 per teacher	22.00	Annually**	3M, Sony, Memorex, Ampex, Karex

*Films may be purchased or rented for 6 weeks for $200.

**A video tape can be recorded, erased, and rerecorded about 400 times. Unless a teacher wishes to keep the tape, it can be reused about five times. However, each teacher taking the course needs a tape—he/she cannot share.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 020 036

ELEMENTARY SCIENCE INFORMATION UNIT

A review of six science curriculums to aid school personnel in deciding which of the programs suits their own situation

The *Elementary Science Information Unit* reviews and compares six science curriculums in such a way as to aid school personnel in deciding which of the programs best suits their own situation. (*Conceptually Oriented Program in Elementary Science* (COPES), *Elementary Science Study* (ESS), *Inquiry Development Program* (DP), *Minnesota Mathematics and Science Teaching Project* (MINNEMAST), *Science Curriculum Improvement Study* (SCIS), and *Science Process Approach* (SPA) are all described in parallel fashion. An introductory booklet outlines procedures to be followed when a group is being conducted step-by-step through the review process. A review booklet gives readers a brief introduction to all six programs. Each program is treated to a color filmstrip-audiotape review after being compared and contrasted via an introductory filmstrip-audiotape presentation. Finally, each program is described in detail in 30- to 40-page booklets.

SUBJECT AREA(S)

The subject area is elementary science curriculums.

INTENDED USERS AND BENEFICIARIES

The intended users are administrators and teachers in elementary schools, preservice trainees, science consultants, and instructors in curriculum methods.

GOAL(S) OR PURPOSE(S)

The purposes of this information unit are to assist school decisionmakers in gaining information about, and selecting between, some of the major Federally funded elementary science curriculums and to provide a multimedia model to help train educators in the process of curriculum decisionmaking.

PATTERNS OF USE

The information unit is planned for use by groups responsible for science curriculum decisions at the school district level. The group views an introductory filmstrip with cassette tape, then surveys the various curriculums in depth through filmstrips and detailed program reports. In preservice training programs, an instructor would make student assignments; but in a school district, leadership in the use of the unit might be assigned by the district office.

ASSESSMENT PROVISIONS

No assessment techniques are provided in the unit. Choice of curriculums will depend on various factors; e.g., district needs, interests, demographic characteristics. Presumably, users assess the options in terms of predeterminal local criteria for a suitable science program.

TIME REQUIREMENTS

The seven filmstrips and eight booklets (plus supplement) could conceivably be reviewed, read, and discussed in 1 day. However, use over a period of several weeks is recommended.

IMPLEMENTATION PROCEDURES

A filmstrip projector and reel-to-reel audiotape recorder are required.

ASSURANCES AND CLAIMS

Assurances

During development and field testing and in the several years that the product has been distributed and used nationally, no difficulties have been revealed.

Claims

The content of the material is now somewhat out of date, since development work ended in 1970 and the only supplement was released in 1971. However, the product as a decisionmaking model has been very thoroughly validated, as reported in *An Educational Development Case Study*. To obtain the study, No. ED 043 515, $0.76 (microfiche), $3.32 (paper), add $0.26 (postage), order from:

INDIVIDUALIZED SCIENCE (IS)

A basal science program closely integrated with an individualized learning management system

Individualized Science (IS) is a basal science program comprising 17 mainstream units and 6 alternative pathways units. The mainstream units are organized into 6 levels (designated A-F). Each level is appropriate for use at several different school grades. For example, level A materials designed for the "average" 1st-grade child may be used with equal success by a more advanced kindergarten child or a less advanced 2d-grade child.

IS is a science curriculum closely integrated with an individualized learning management system. The program provides the child with science experiences designed to develop, by means of the child's active involvement, a comprehensive view of the scientific enterprise. Instruction in the program imparts to the child knowledge about science, its methodologies, and its influence on society and individuals. Science instruction is individualized in order that each child can derive maximum benefit from personal experiences in science.

Each unit is composed of many (30-50) different instructional segments, some designed for self-instruction and others for children to learn together. The instructional strategy used in an instructional segment depends on the kind of learning the segment is designed to engender. Individual Lessons (IL's) are used primarily to impart information to the child. Miniature Explorations (MinEx's) are laboratory exercises to give children opportunities to engage in discovery learning, to practice using scientific apparatus, and to be exposed to models of scientific exploration. MinEx's and IL's are examples of the 10 or so different kinds of learning resources for both individual and small-group study that are used in each level of IS. The program's individualized learning management system places a sizable part of the responsibility for managing and evaluating learning on the child.

A typical day in IS begins as a child consults the planning booklet to find out which activities to do. If an individual lesson is selected, the child obtains the appropriate lesson booklet, answer booklet, and manipulative materials. (Each lesson booklet has an associated read-along tape which the child can elect to use.) In doing the lesson, the child reads (or listens), carries out investigations with concrete objects, records observations, and writes answers to questions. A second child may elect to do a MinEx together with another child. In doing the MinEx, the children will have considerably less direction and will do more investigating and manipulating of equipment than the child doing an individual lesson.

At the same time, other children in the room can be found working with various other learning resources that the program provides. Some will be engaged in instructional games and other group activities. Others may be using a filmstrip or doing a project activity. Another child is having a conference with the teacher. The room is orderly, but there is a buzz of excitement as all the children pursue their science learning.

SUBJECT AREA(S)

The subject area is general science, with emphases on: (1) Concepts from human physiology, (2) physical and biological systems, (3) interactions of science and society, and (4) processes of scientific inquiry.

Learning-to-learn skills: Planning and self-direction of learning and evaluation of one's learning are the methods used in the package.

INTENDED USERS AND BENEFICIARIES

Students of all abilities in grades K-6 are the intended users.

The six levels, A-F, of the program have been designed to correspond with the abilities of the "average" child in grades 1-6. However, the match between IS levels and school grades is only approximate since this is an individualized program. The students progress at their own rate and work with materials from an IS level appropriate to individual development. Field test data indicate that advanced kindergarten children can successfully use level A materials and that materials from IS levels E and F are suitable for students in grades 7 and 8.

GOAL(S) OR PURPOSE(S)

The program is designed to enable children: (1) To acquire a foundation of scientific literacy; (2) to be skillful in using the processes of scientific inquiry and to be able to carry out inquiries; (3) to display positive attitudes towards their study of science and scientific inquiry and to display an informed attitude toward the scientific enterprise; (4) to view the learning process as primarily self-directed and self-initiated; and (5) to play a major role in evaluating the quality, extent, and rapidity of their learning.

Each of these five major goals of IS has several components, which are specified as student terminal behaviors. In addition, the components under each goal are further specified by student competencies for each IS level and behavioral objectives for each unit.

School-wide use. IS is a complete sequential science program consisting of 3 introductory units, 17 mainstream units, and 6 alternative pathways units. A child can successfully enter the program or a school can implement the program at any grade level through the use of the introductory units. Mainstream units comprise the basic science core which each student is expected to study. alternative pathways units are optional explorations which are available to the student.

The three introductory units are the mechanisms by which the child learns the individualized learning management procedures and prerequisite academic skills or science content necessary for successful participation in IS mainstream and alternative pathways units. Thus, the start unit is designed to introduce the child to management procedures used in the Simpson unit (the first unit of level A). The unit also assesses the child's competence in certain academic skills (recognizing and writing numbers, for example) which are essential to successful participation in the Simpson unit.

The launch unit teaches all those management procedures taught in the start and level A and B units and certain essential science content taught in units of levels A and B. Hence, the launch unit provides a mechanism by which a 3d- or 4th-grade student can enter the IS program without first doing start, level A, and level B.

The link unit is the mechanism by which students in grades 5 or 6 gain entry to level E of the program. It teaches the management procedures and certain essential science content taught in all the units of IS that precede level E.

The existence of introductory units means that IS can be implemented in an elementary school in various ways.

Classroom use. Several levels of IS can be used simultaneously in an elementary school science classroom or in a self-contained classroom. Levels are sequential and cumulative. Some units within levels must be taken in a specific sequence; but for others, the students may select the order in which they will do the units. Within a unit, there are certain learning resources which each child must do. Individual lessons are generally required and generally must be done sequentially, but the other kinds of learning resources can be used in any order.

ASSESSMENT PROVISIONS

Formal and informal mechanisms for the assessment of all five goals of IS are an integral part of the curriculum materials. Provisions for assessment of the inquiry, self-direction, coevaluation, and affective goals are largely informal. For each of these goals, competencies that the child should display upon completion of an IS level are defined. The teacher or other evaluator can use the competency statements as a checklist to assess the child's progress toward attaining each of these goals.

More formal assessment procedures are defined for the scientific literacy goal. Each mainstream unit has a pretest which is used to assess the knowledge that the child possesses about the unit's science content. Results of the pretest are used to help the children plan their work in the unit. Most of the IS learning resources require that the children make written responses to questions. Answers to these questions are available to the children so that they can check their progress through the learning resource. Individual lessons have semiformal checkups, usually at the end, which the children use to determine whether they have satisfactorily learned the content of the individual lesson.

Each mainstream unit includes a posttest. Results of the posttest are used to determine whether a child has satisfactorily completed a unit, or to plan further work in the unit if the results are not satisfactory. Posttest scores are used by some teachers as a basis for assigning grades.

TIME REQUIREMENTS

The amount of time an individual child takes to complete a unit varies greatly, as does the amount of time individual schools set aside for science instruction at various grades. Thus, exact specification of time requirements is impossible. On the average, however, one IS level should provide adequate science instruction for 1 year in the school grade level for which it is designed.

IMPLEMENTATION PROCEDURES

Before implementing IS, classroom teachers should complete "Preparation for IS." This is a self-instructional packaged program designed to teach that information which is necessary for successful implementation of IS. The product is listed in the "Materials and Equipment" section.

A large number of students can use the same set of IS materials when science time is carefully scheduled. The sets of IS materials are made available for student use either by setting them up permanently in a science room or in some other central area, or by moving them on a cart from one self-contained classroom to another. (A specially designed cart for IS materials is available as an optional purchase.) In the latter arrangement student paperwork for each IS unit remains in the individual classrooms. The figure of 450 students using the same set of IS materials is based on 15 classes of 30 students, each class scheduled for science 2 times per week. The figure of 300 students using the same set of IS materials is based on 10 classes of 30 students, each class scheduled for science 3 times per week.

Summary Cost Information

School-wide installation of levels A through D complete, level E mainstream units, start, and launch units for 630 students would cost $5,559.95, or an average cost per student of $8.80.

The average continuing cost per individual student with replacement of all student paperwork would be $1.97. The average continuing cost per individual student with use of plastic sleeves to reuse paperwork would be $1.40.

Installation purchases of particular levels of the IS program may also be made. In addition, starter packages are available for initial installation of IS at modest cost.

Personnel Required for Product Adoption and Implementation

The regularly certified classroom teacher can teach IS. It is recommended that all teachers using the program complete the "Preparation for IS" unit. No special support services are required.

ASSURANCES AND CLAIMS

Assurances

During the course of formative evaluation, several thousand elementary schoolchildren worked with IS materials. Currently, the commercial version of the program is being used in over 250 schools. On the basis of these experiences, the following assurances of harmlessness, social fairness, and transportability are made.

There is no evidence that participation in IS exposes the child to any psychological or sociological harm or undue physical harm. It should be noted that IS is a science program that relies heavily on direct student involvement with objects of the physical world. Such mishaps as insect stings and minor cuts, burns, and bruises have occasionally occurred. None have been serious. Curriculum materials contain adequate precautions and directions for the safe use of all scientific equipment, physical objects, and chemical substances.

In the original writing of the curriculum materials and in their revisions, constant attention was given to eliminating any phrasing and illustrations that might perpetuate sexism, racism, or other biases. The commercial version of the IS materials reflects the positive results of the attention given to this problem. (Also see Claims section.)

Claims of Careful Product Development, Effectiveness, and Social Fairness

Each IS unit undergoes extensive formative evaluation. The science content is validated by a member of a panel of university scientists. Classroom testing of the materials takes place in two steps. A small-scale classroom test of prototype materials is carried out by the developers. Then a more comprehensive field test of materials is carried out by Research for Better Schools (RBS). After each of these classroom tests, revisions are made. (Further discussion of this process can be found in Audrey B. Champagne's and Leo E. Klopfer's "Formative Evaluation in Science Curriculum Development," *Journal of Research in Science Teaching*, 1974, 11, 185-203.) For the IS program as a whole, the formative evaluation includes reviews of its goals, objectives, organization, and instructional strategies by science educators, elementary schoolteachers, psychologists, and instructional technologists, none of whom are directly associated with the program's development.

The results of formative evaluation during the development of IS and the experiences of users of the commercial version justify the following claims. For each claim, the nature of the supporting evidence is indicated in parentheses.

1. The science content is accurate. (Expert reviews of science content.)

2. Children are capable of performing the learning tasks required of them when they work in an IS unit designed for their level of development. (Field test reports from RBS; observations in prototype tests.)

3. IS operates smoothly in various kinds of instructional settings such as science classrooms, self-contained classrooms, and open-space schools. (Field test reports from RBS; commercial purchasers' feedback.)

4. IS operates smoothly under the direction of teachers with various teaching styles. (Field test reports from RBS; commercial version purchasers' feedback.)

5. IS improves children's skills in self-management of their learning activities. (Commercial version purchasers' feedback.)

6. Most children enjoy learning science with IS more than they enjoyed learning science in the "traditional" format of textbook reading plus teacher demonstrations. (Commercial version purchasers' feedback; direct reports from children.)

7. IS printed materials give fair treatment to the two sexes and are free from obvious or subtle racial bias. (Report on sex and race bias study by RBS.)

8. The logical and pedagogical structures of IS are internally consistent, and they are consistent with the program's five major goals. (Curriculum analysis report.)

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Multiple classroom or science room set including same items as level A	1 set for 300 students maximum	Not determined		
Student paperwork including same items as level A	1 set per 30 students	Not determined		
Alternative pathways units (1 unit to be selected for level D; 1 unit to be selected for level E; 2 units to be selected for level F. Available units: Comstock, Linnaeus, Archimedes, Volta, Copernicus, Lyell)				
Multiple classroom or science room set including student exploration booklets, booklet of readings, activity cards, audiotapes, filmstrip, manipulatives, and teacher's manual	1 set for 300 students maximum	Not determined		
Student paperwork for each unit	1 set per 30 students	Not determined		
Basic equipment and materials				
Cassette tape player with headphones	8 per set of IS levels A and B; 2 per set of IS level C, D, E, or F	40.95	Every 4 years	Distributor or any A-V supplier
35mm filmstrip viewer or projector	1 per set of any IS level	22.00-55.00	Every 5 years	Any A-V supplier
Hotplate	1 per set of any IS level	18.00	Every 5 years	
Student folder with pockets	1 per student	.20	Yearly	
Teacher "Preparation for IS" unit with print materials, audiotapes, filmstrips, and coordinators' manual	1 per school	125.00		
Optional equipment				
Cart (for storing and moving materials)	1 for IS levels A and B; 1 each for IS levels C-F	110.00		
Aquarium	1 per science room or classroom	25.83		Distributor or other supplier
Plastic sleeves and pens (for reuse of student paperwork)	30 per IS level	29.85 per 30 students	Every 4 years

AVAILABILITY

Start and launch units, levels A through D, and the Joule unit of level E have been published (copyright 1972-74). Beaumont and Voit units of level E are scheduled for release in July 1975.

Field testing of four alternative pathways units has been completed, and revisions for commercial publication have been made. The link unit, level F mainstream units, and two alternative pathways units are being field tested.

Six alternative pathways units, link unit, and level F mainstream units will be published in 1976 and 1977.

Two sound filmstrips showing the IS program in actual classroom use are available: "Typical Day in Individualized Science (Grades K-2)" and "Typical Day in Individualized Science (Grades 3-6)."

A list of demonstration schools around the Nation that are teaching IS and are open to visitation is also available.

Sample materials including kits, printed materials, and filmstrips are available at no charge on loan. Teacher's manuals are also available on request from the distributor:

Imperial International Learning Corporation
Box 548, Route 45 South
Kankakee, Ill. 60901

INFORMATION CURRENT AS OF MARCH 1975 ■

INQUIRY ROLE APPROACH (ADAPTED FOR USE WITH SILVER-BURDETT'S HIGH SCHOOL PROGRAM "BIOLOGY")

A complete instructional system for teaching secondary-level biology

Inquiry Role Approach (IRA) is an instructional system for teaching secondary biology which includes teacher-training materials, a teacher's manual with instructions for day-to-day classroom activities, and student materials.

While the goals of IRA include the learning of biology content—factual information, concepts and principles of biology—the goals also emphasize inquiry-skill development, social interaction skills, and attitude development necessary for good inquiry. The IRA method is based on the premise that biology content understanding, inquiry skills, social skills, and attitudes are interdependent and can be achieved best in a program that integrates them.

A combination of individual, small-group, and whole-class activities is used to expedite learning of important skills and concepts. Major emphasis is given to learning and using four roles of responsibility by members of the four-pupil small groups. These responsibilities complement one another and are periodically reassigned as pupils master them.

The product moves pupils through three steps or "themes" of activity, each one culminating in a several-week inquiry project. These projects, or laboratory explorations in biology, are successively less structured and open-ended to serve as a vehicle for demonstration of the gradually developing inquiry skills and attitudes of pupils. The structure of and dependence on teams gives way by "theme III" to freedom to work individually or select teammates. This developing competence is formatively assessed through the year by individuals, teams, the class, and the teacher. All data are shared and procedures are established to put the data to use by indicating specific areas needing remediation. Instruments for measuring content, inquiry skill, social skill, and attitude are part of the product.

Development of the role of the teacher as manager and facilitator is carefully spelled out in the teacher's manual.

SUBJECT AREA(S)

The current adapatation is to the published text mentioned above. McREL retains the rights to adapt the product to texts of other publishers, and in other subject areas. IRA's intrinsic subject emphasis is in the development of measurable skills of scientific inquiry and productive interpersonal relations, as well as attitudes which are positively related to these areas. The pupils are trained to function and assess their progress relatively independent of the teacher, beginning with the establishment of firmly structured learning and leading to independent problem solving. A subject area of emphasis is, therefore, learning how to learn.

INTENDED USERS AND BENEFICIARIES

Classes of high school biology students with average to above average previous scholastic achievement and their teachers. The reading level is 8th grade.

GOAL(S) OR PURPOSE(S)

Goals of the IRA are: (1) To be able to apply inquiry skills in attempting to resolve relatively unstructured problems, (2) to develop attitudes which complement the development of inquiry skills, (3) to be able to apply social skills to facilitate interacting with one or more pupils in discussions keyed to problem solving, and (4) to be able to apply biologic subject matter (content) in problem solving situations.

PATTERNS OF USE

Activities are sequenced within each "theme" to facilitate logical accumulation of knowledge and skills and to reflect the consensus of field-test teachers whose feedback resulted in rearrangements, deletions, and additions. Wholesale rearrangement of activities would confuse teachers and students. The sequence of themes is also hierarchical, leading from high to low structure of learning activities.

IRA, when used with the text *Biology* and normally available biology equipment and supplies, is the complete high school general biology course.

ASSESSMENT PROVISIONS

Tested items and instruments to measure fulfillment of IRA's objectives and their derivatives are included for use at the activity, theme, and pretest-posttest levels. Special attention was given by the developers to provide instrumentation needed to assess, particularly, the inquiry skill, social skill, and attitude dimensions of IRA. Explicit guidelines for teacher and student administration, scoring, and data interpretation of instruments are included in the product.

TIME REQUIREMENTS

IRA is normally implemented and assessed over a 2-semester year of daily biology classes. Many teachers use the two semesters, to implement only themes I and II which falls short of independent inquiry. These teachers have offered theme III as an advanced biology course the next year. The speed of pupil movement through the themes is largely dependent on teacher willingness to allow pupils to progress at their own pace.

IMPLEMENTATION PROCEDURES

Special services—During field testing, IRA teachers were trained and coordinated in a given district by a fellow teacher who received prior special training from McREL staff members. This procedure, operated by intermediate agents in addition to the developer would facilitate proper implementation in the critical "first year" in a given district.

The current availability of special services is limited to very occasional demonstrations by the publisher at professional meetings. Establishment of several dissemination centers (intermediate agencies) has been proposed by the developer who would coordinate the process and cooperate with the publisher.

Maintenance of users through provision of installation tips newsletters, product updating, and onsite assistance in situations of unusual problems would be desirable in addition to preinstallation workshops and orientations.

MATERIALS AND EQUIPMENT

The required materials consist of the IRA package (at $32.00 per teacher). They can be used for all the teachers' biology students over a 1-year period. Textbooks and classroom supplies and equipment are no different from those required of a teacher using the text *Biology* or other popular texts without IRA; e.g., the IRA package is required for a biology teacher who is already set up to teach biology and who plans to use the Silver-Burdett text *Biology* as the main text for the year.

Additional or special services for implementation would depend on the availability of funds to enable the developer to cooperate and share with the publisher to provide such support or approximate the sort of teacher training which preceded field testing of the product and is desirable in the initial installation of any new curriculum and instruction program.

ASSURANCES AND CLAIMS

During the 6 years that the product was under development, and during formative and summative evaluation, no evidence was uncovered as to negative effects on users. Classes of students heterogeneously mixed with respect to sex, race, academic ability, and socioeconomic standing, as well as classes characterized by homogeneity of one or more of these factors participated in tests of the product. The final field test of the product showed that students of all DAT quartile groups could show improvement in the product's focus skills and attitudes. However, the developers recommend that its use be restricted to classes characterized by previous average to above-average academic performance—this is primarily a function of reading level (8th grade) which could restrict progress of very slow readers.

Assurances of Harmlessness

There is no evidence of any harmful incidents which have been reported during tests of the product. Such incidents would have been revealed in anecdotal reports from field-test teachers. These reports were regularly collected during field testing.

Assurances of Social Fairness

The materials show no bias either in favor or against a particular social, sexual, racial, religious, or other group. The developers have taken special care to avoid any bias.

Assurances of Replicability or Transportability

The developer assures that the IRA product adaptation to Silver-Burdett's text *Biology* is based on the IRA materials used during final field test in the school year 1972-73. Except as revised, the activities and instruments contained in the product should enable replicability. While the IRA product itself is published and transportable, implementation success may vary according to the amount of orientation or workshop facilitation made available to teachers. It is the developer's position that the product's self-contained implementation guidelines are explicit; however, since field testing included orientation workshop training, the developer recommends such activity to increase the probability of implementation success.

Claim of Effectiveness

The product is effective in developing inquiry skill and related attitudes. This claim has been supported throughout the formative and summative evaluation of the product and was recently documented in:

a. *Inquiry Role Approach Field Test Report* (1972-73), L. Seymour et al., McREL, August 1973.

b. "A Successful Inquiry Methodology," L. Seymour et al., *The American Biology Teacher*, vol. 36, No. 6, September 1974 (based on report a).

c. "Social Skills and Attitudes Acquisition by Secondary Biology Students" and "Inquiry Role Approach Student's Acquisition of Inquiry Skills and Knowledge of Biology"—two papers presented by the developers at the National Association for Research in Science Teaching Convention, April 1974, Chicago, Ill.

Claims of Careful Product Development

Both implementer and learner input and feedback were used in initial product development and for en route and final revisions. Sound principles of behavioral objective planning, implementing, and evaluating were incorporated into the product; and psychologists and social psychologists served as consultants in development of the group discussions/role-taking areas of IRA. Content accuracy and instructional approach were guided by input from McREL to non-McREL biologists and science educators, including a committee composed of McREL and biological science curriculum study staff that produced an extensively disseminated and used document of inquiry objectives and attitudes. *Inquiry Objectives in the Teaching of Biology*, a joint publication of Biological Science Curriculum Study and Mid-continent Regional Educational Laboratory, served as the primary set of constructs upon which IRA developers based inquiry-skill activities in the product.

AVAILABILITY

The "Paper and Pencil" parts of the IRA (teacher's manual and student materials) are available from the publisher, Silver-Burdett, Morristown, N.J.

Trainer of trainer (intermediate agent) materials and supplementary audiotapes and video tapes have not yet been published.

Development of trainer of trainer (intermediate agent) materials and supplementary audiotapes and video tapes will be completed dependent on availability of funds.

The IRA product is available from:
Silver-Burdett Co.
A Division of General Learning Corp.
250 James St.
Morristown, N.J. 07960

The film, "Learning Through Inquiry: The Search for Mount Everest," showing unrehearsed IRA classroom episodes filmed in 1971 may be rented from the producers:

"MEN AND IDEAS" FILMSTRIPS SERIES

Filmstrips which explore some of the interactions between science and society, as well as the differences among scientists as individuals

The human and social aspects of science are too infrequently considered in science instructional materials, despite the generally acknowledged importance of young people's need for better understanding of science and its impact on everyone's life. The "Men and Ideas" filmstrips series provides opportunities for students to learn about the lives and work of people who have made significant contributions to the physical and biological sciences. The filmstrips explore some of the interactions between science and society, as well as the differences among scientists as individuals.

Some of the scientists whose work is described in the series include Galileo Galilei, Marie Curie, Luther Burbank, John Dalton, Archimedes, Nicolaus Copernicus, William Beaumont, and Carl Linnaeus.

Each of the 35mm color filmstrips with accompanying audiotape cassettes can be used independently by individual students or as a basis for class or small-group discussion. A printed teacher's guide containing background information on the scientist, questions for discussion topics, and suggestions for followup activities is provided with each filmstrip.

The following summaries of several filmstrips indicate the scope and emphases of the series:

ANDREAS VESALIUS (1514-1564). The modern study of anatomy dates from Vesalius' work at the University of Padua. He was one of the first scientists to investigate human anatomy by dissection, and published a major text filled with highly accurate drawings of the various systems. In the filmstrip, his life and scientific work are described, and several of his still-famous anatomical drawings are shown. The filmstrip stresses Vesalius' teaching that the human body is a system composed of different systems that interact.

ANTOINE LAVOISIER (1743-1794). This French scientist completely reformed the system of classifying the then-known elements, and revised the system of chemical nomenclature. He is perhaps best known for his explanation of burning, and the filmstrip focuses on this work. His contact with the English scientist Joseph Priestley, and the effect of Priestley's discovery of oxygen upon Lavoisier's ideas and experiments, is explored. The filmstrip includes biographical information leading up to Lavoisier's execution in the aftermath of the French Revolution.

JOHN SCOTT HALDANE (1860-1936). Research on respiration and the solution of practical problems in mining and deep sea diving, were the major contributions of John Scott Haldane. This English scientist did major work on the effects of different levels of carbon dioxide and oxygen on the breathing process. His practical contributions include decompression tables still used in diving work today, an improved gas mask used in World War I, and important advances in overcoming the problem of deadly "mine damp" in coal mining. The filmstrip explores Haldane's life and focuses on both his scientific and practical contributions to society.

ANNA B. COMSTOCK (1854-1930). The foremost woman naturalist in America in her day, Anna Comstock strongly supported nature study in schools. She wrote a number of books on nature and taught many teachers how to incorporate nature study into their classes. She was also an accomplished wood engraver, illustrating many books, and became the first woman professor at Cornell University. In the filmstrip, her life is traced from earliest "nature walks" with her mother to her teaching days at Cornell. The filmstrip depicts many of the plants and animals studied by Anna Comstock.

RD 020 039

SUBJECT AREA(S)

The subject area covered in the filmstrips can be characterized as general science. (Most of the filmstrips can also be usefully employed in teaching social studies.)

INTENDED USERS AND BENEFICIARIES

Students of all abilities in grades 1 to 6 are the intended users.

Six of the filmstrips are designed primarily for children in grades 1 to 4 (see package A in "Materials and Equipment" section below); six filmstrips are primarily for children in grades 3 to 5 (package B); and six filmstrips are primarily for children in grades 4 to 6 (package C).

Although the primary audience is children in grades 1 to 6, the filmstrips later in the series (packages B and C) have been successfully used with 7th- and 8th-grade students during prototype and field testing.

GOAL(S) OR PURPOSE(S)

The filmstrip series is intended: (1) To provide the student with information about the lives, personalities, scientific accomplishments, and social contributions of men and women who have contributed to science; (2) to illustrate and examine the interactions between science and society; and (3) to help develop informed attitudes toward science and positive attitudes toward scientists.

PATTERNS OF USE

The filmstrips in the series are self-contained instructional materials and may be used singly or in any order. As noted in the "Intended Users" section above, the filmstrips earlier in the series are more suitable for younger children, while those later in the series are more suitable for older children. They may supplement any science program and may also be used in teaching social studies.

ASSESSMENT PROVISIONS

There is no formal testing. Questions included in the teacher's guides might suggest items that a teacher can use for assessing students' learning.

TIME REQUIREMENTS

Viewing and discussing each filmstrip normally requires one class period. If the suggested followup activities are done, more time is needed, the amount depending on student interest and teacher planning.

IMPLEMENTATION PROCEDURES

No special equipment, facilities, or organization is required.

ASSURANCES AND CLAIMS

Assurances

The "Men and Ideas" filmstrips have been widely used for 1 year. There is no evidence that any of them induces physical, psychological, or social harm.

There is no evidence that the filmstrips perpetuate sexism, racism, or other biases related to religion, age, or socioeconomic stereotypes. The word "men" in the series title produced some consternation among field-test teachers when the particular filmstrip was about a female scientist, but these incidents helped to call attention to and underscore one of the series' themes that both women and men contribute to science. The series includes persons with diverse personalities and representatives of both sexes and various cultural groups.

The field testing of the "Men and Ideas" filmstrips was conducted outside of the development site by Research for Better Schools, Inc. The developers have no direct control over the use that various purchasers are making of the approximately 2,300 copies of the commercial versions of the several filmstrips distributed to date.

Claims

The "Men and Ideas" filmstrips were originally developed for the Individualized Science (IS) program and underwent prototype and field testing as a part of the formative evaluation of IS. (For a discussion of this process, see Audrey B. Champagne and Leo E. Klopfer, "Formative Evaluation in Science Curriculum Development," *Journal of Research in Science Teaching*, 1974, 11, 185-203.) Based on the results of the several stages of critical examinations, classroom tests, and revisions that make up the formative evaluation of curriculum materials, it is claimed that the scientific, historical, and biographical content of the filmstrips is accurate and that the content of the filmstrips is appropriate for children in the school grade levels for which the filmstrips are intended.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Filmstrip and cassette tape, teacher's guide	1	12.95*	Every 5 years	
35mm filmstrip viewer or projector	1	30.00-55.00	Every 5 years	Any A-V supplier
Cassette tape player	1	25.00-40.00	Every 4 years	

*The following packages of six filmstrips, cassettes, and teacher's guides are available at $74.50 each:
Package A: Simpson, Galileo, Michelson, Burbank, Hooke, Curie
Package B: Lagrange, Vesalius, Black, Lavoisier, Dalton, Haldane
Package C: Comstock, Joule, Beaumont, Voit, Volta, Archimedes
For all 3 packages (18 titles), the price is $216.00.

AVAILABILITY

Eighteen filmstrips in the series have been published, copyright 1972-74 (claimed until 1984). Three additional filmstrips are at the field-testing stage, and three more are being prepared for testing.

The six filmstrips at or near the field-testing stage are expected to be released in 1976 or in 1977 from:
Imperial International Learning Corp.
Box 548, Rte. 45 South
Kankakee, Ill. 60901

INFORMATION CURRENT AS OF MARCH 1975 ■

OVERVIEW

RONALD LESLIE
New York University
New York, New York

Today's educational challenge is to provide appropriate instruction for a wide variety of learners. This is no small task. Many of our current educational practices are suspected of being ineffective because of a national decline of scores on reading and writing tests. New types of instructional programs, designed to reverse this trend, may pose new difficulties. For example, a major effort is currently being made by groups of parents and teachers to place students with special difficulties in the regular classroom. One of the immediate implications of this approach is a larger diversity of learners in the classroom than ever before. Educational researchers are thus faced with a twofold problem: They are asked to find ways of reversing the downward trend in communication skills and, at the same time, to create programs which are designed to meet the needs of an increasingly diverse school population.

The preparation of instructional programs which are appropriate for learners of different backgrounds and aptitudes requires a knowledge of the instructional process. This knowledge must be focused in several areas: (a) The state or characteristics of the learner, (b) the characteristics of the tasks and materials which we expect the learner to master, (c) the procedures and conditions of the learning environment (e.g., instructional methods and school organization) which can affect the learner's understanding, and (d) the methods of assessing individual and institutional change.

Historically, the improvement of educational outcomes has been attempted through one or both of two widely used innovations: (a) The adoption of new instructional programs, and (b) the reorganization of the school or classroom. The effectiveness of these innovations is determined by the nature of the changes. Frequently the changes do not reflect an increased understanding of the learner or the reading and writing process, but rather reflect some theoretical hypotheses of the authors which have not been adequately investigated. All too often a cycle of short-term increases in learner performance is followed by a decline in program effectiveness after the first few years of adoption. However, within the past decade there has been a change of emphasis in educational research, and an attempt is being made to develop and validate programs which reflect more than a speculatively theoretical understanding of reading and writing.

Conceptually, there are few coherent methods of developing instructional programs, of which two are the focus for much current activity. The first may be termed a skill strategy of curricular development and the second a process strategy. The skill strategy is to identify the skills (behavioral performance of specific tasks) which are either necessary or beneficial in reaching some other goal (e.g., reading a fourth-grade social studies text with understanding requires lexical, semantic, syntactic, and decoding skills). The isolation of the skills, the validation of their importance to reading or writing performance, and the sequencing of the skills for optimal transfer learning require extensive research. The result provides a basis for curricular development. The skills identified through research largely determine the goals of the curriculum and characteristics of the materials used. Information on the skill sequences are used in making decisions on the instructional sequence. Specific day-to-day instructional strategies are not determined by the information on the skills. Day-to-day instructional methods may be evaluated as the program is being implemented in the schools (formative evaluation). Many of the curricular programs developed by the NIE-sponsored educational laboratories and centers have used the skill strategy. In fact, these research programs have made major contributions to the development of methods to implement such an approach to curriculum development.

While there are many examples of the skill strategy, the process strategy remains an ideal which has not been implemented. This strategy assumes that the underlying psychological processes involved in skilled behavior often overlap for different skills. This would indicate that the basis of skilled performance often is not independent abilities. This approach also assumes that there may be performance abilities which reflect not only learning but also developmental changes in the learner. As noted by John B. Carroll, *Psychometric Tests as Cognitive Tasks: A New "Structure of Intellect,"* Office of Naval Research, 1974, the differences in the functioning of the underlying psychological processes may be used to account for individual differences such as those on intelligence tests. Since the process strategy is developed in terms of underlying psychological processes, this approach must seek an understanding of the factors which affect these processes. That is, the aim is to facilitate the learner's development of processing strategies which enable the learner to perform reading and writing tasks. Therefore, the particular characteristics of each instructional situation must be examined to determine whether or not it is likely to facilitate the specific processing abilities desired. The implementation of the process approach must concentrate on the day-to-day factors which affect learning, the factors which can conceivably change the way the learner processes the material in the instructional task. Logically, one of the first steps in implementing this strategy is the analysis of skilled performance in terms of processing capabilities and strategies

Dr. Ronald Leslie is an Assistant Professor of Educational Psychology at New York University.

of the learners. As of now, this programmatic task is just being started.

Federally funded research through the NIE has led to the creation of a number of successful curricular programs in reading and writing. While all of these programs and the research behind them cannot be covered here, a few programs will be noted which have made a major contribution to our knowledge of curricular development in reading and writing.

The learner

What have we learned about the characteristics of the learner that are clearly relevant for curricular development in reading and language arts? The clearest examples of using research about learner characteristics to develop curriculum are found in the area of beginning reading. Educational research on the skills necessary for learning to read has had a major impact on instructional programs (e.g., Beginning Reading Program, New Primary Grades Reading System, Wisconsin Design for Reading Skill Development (WDRSD): Word Attack, and the Prereading Skills Program). One particularly good example of using the skills strategy to develop a program is exemplified by the Prereading Skills Program. Research on the skills related to learning to read revealed the importance of distinguishing among global perceptual and auditory skills to isolate specific tasks important in the early reading instruction (e.g., distinguishing the order versus the orientation of letters as separate skills). The clear specification and validation of the skills led to another result, the elimination of skills not empirically related to the goal of learning to read (e.g., learning color names). Identified skills were used to define the program's objectives. Instructional methodologies which were not determined by the skills to be taught (e.g., learning some system for referring to sounds) were tested independently for effectiveness. The entire program was then evaluated in a series of test-and-revise evaluations which identified real and potential problems in the implementation of the program. The funding for such extensive development and evaluation has permitted the creation of an instructional program which uses the research knowledge to create a program, and extensive evaluation to see that the program is amenable to classroom implementation.

It is not clear that this skills strategy will be as successful with more complex reading comprehension programs. It is clear that our present knowledge does not identify and sequence the skills necessary for comprehending written material. The IRI Reading Program, which was under development at the Learning Research and Development Center (LRDC) and then at Research for Better Schools (RBS), was to implement such a strategy for a fourth-grade through sixth-grade program. However, the personnel at RBS came to the conclusion that there was not a sufficient base for creating a program based solely on reading comprehension skills. The resulting program, SPIRAL, combines specific skill instruction with high-interest literature in a uniquely designed program. Currently, there is no assurance that the skills-strategy approach will be more successful in the future.

Instructional tasks and materials

There are several reasons to examine the characteristics of materials which affect learner performance. If we understand the elements which contribute to the difficulty of performing some task such as understanding a passage of material, measures may be taken to reduce such difficulties either through instruction or changes in the material itself. Skill instruction, controlled vocabulary, and readability indexes are examples which have been used to achieve this result.

Future research will need to concentrate on identifying new characteristics of the text which are important in reading and writing. Textual material consists of a set of words, sentences, and paragraphs which follow some rules of organization. The ability to use the organizational structures as source of clues to the meaning of the text along with the more easily identified words, sentences, and paragraphs will determine, to a large part, the success of the communication. We have generally assumed that much of the knowledge is available from an understanding of the spoken language. But there is increasing evidence that by the fourth grade there are formal structures and logical operations in textual materials which are not often found in spoken language. An understanding of these forms will be necessary if programs are to be created which can deal with reading comprehension in the intermediate grades.

Learning environment

Many of the programs developed through the laboratories and centers attempt to integrate within new curricular programs changes in the instructional materials, the methods of instruction, and the classroom organization in which learning is to occur. Programs which specify the skills which are to be mastered by each child and which develop implementation strategies to teach these skills only to children who have not already learned them are exemplary of the concept of individualization. The specific benefits of individualization are becoming well documented. However, the methods of creating individualized instruction are often left to the teacher whose job it is to implement the program.

The research carried on at LRDC and WDRSD on implementing individualized curriculums have made these centers leaders in the field. Yet we are still a long way from understanding how to overcome all of the practical classroom problems involved in trying to insure that each child is considered as an individual with specific instructional needs.

Summary

The research emphasis in reading and language arts is changing. Strategies for translating research on the characteristics of the learner, the characteristics of the tasks and material to be mastered, the procedures and conditions of the learning environment, and methods of assessment into curricular programs are being developed and tested. Therefore, the possibility of providing appropriate instruction for a wide variety of learners may be considered a realistic goal.

SWRL/GINN SPELLING PROGRAM

*A program for conducting sequential spelling instruction
for children in grades K-6*

The *SWRL/Ginn Spelling Program* provides research-based, classroom-verified resources for conducting sequential spelling instruction. The performance-based program is generally used in grades K-6.

The program provides students with the skills needed to spell words used in their written communication. The program is based on linguistic research which has demonstrated that English spelling is regular: The relationship between the pronunciation and spelling of English words facilitates the spelling of a large number of words. Using these relational principles, students can spell large classes of words without learning each word individually. While spelling of words taught in the program provides the specific context for spelling instruction, the learned spelling skills will enable students to spell many other words.

The program content sequence has been designed to provide cumulative learning experiences. New spellings build on previously learned spellings and are maintained and reused in subsequent instruction.

SWRL/Ginn Spelling Program instruction moves through an orderly progression:

First, students practice visual recognition of spellings and oral discrimination sounds.

Second, students practice spelling sounds. While this practice focuses on individual sounds and spellings, it is conducted within the context of whole words; thus students' attention is drawn to specific features of English spelling without losing sight of the words in which they occur.

Third, students can spell sounds individually, they spell program words containing newly taught spellings as well as previously learned spellings.

Fourth, students apply spellings to new, unpracticed words, thus moving beyond a restricted list of words to the larger number of words which they can spell by means of their newly acquired skills.

The program is integrated into regular classroom instruction and is typically teacher-directed in large-group instruction or teacher-, tutor-, or aide-directed in small-group or individual instruction.

SUBJECT AREA(S)

The *SWRL/Ginn Spelling Program* promotes specific English language spelling skills and an understanding of relationships between English pronunciation and English spelling.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in grades K-6.

GOAL(S) OR PURPOSE(S)

The product stresses six outcome areas:

1. Predictable spellings—The pupil learns to spell words with predictable or regular spellings. Predictable spellings are those that can be determined on the basis of the sounds in the word. An example is "bat."
2. Unpredictable but common spellings—The pupil learns to spell a set of frequently used words with unpredictable but common spellings and to use a dictionary to determine the spelling of other words. An example is "heat."
3. Unpredictable and rare spellings—The pupil learns to spell words with unpredictable and rare (irregular) spellings. The spellings in these words do not follow rules and are learned through frequent exposure and use. An example is "laugh."
4. Affixes and affixation rules—The pupil learns to spell a set of frequently used suffixes and prefixes and learns to apply the rules for adding them to root words. An example is "hoping."
5. Punctuation rules—In addition to spelling rules, the pupil learns a set of punctuation rules, including use of capital letters, periods, and apostrophes.
6. Reference sources—The pupil learns to use reference sources to determine the spelling of words.

PATTERNS OF USE

The program is organized into ungraded blocks of instruction. This organization permits pupils to be placed in the program at a point appropriate to their current spelling ability. Each block consists of six units of instruction. Within each unit, there are three types of activities: Instruction, assessment, and supplementary instruction.

The block structure of the program facilitates pupil placement, instructional planning, and grouping based on pupil attainment of specific program skills. Program resources enable the teacher to supplement planned spelling activities in accordance with pupil interest and learning.

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on sound information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific spelling program skills. Suggestions are provided for assisting those pupils who might benefit from supplementary instruction on program skills.

The spelling program Quality Assurance (QA) system includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The QA system also provides a means by which the pupil proficiency attained with the program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

Scheduling and length of lessons will vary with teacher judgment of pupil learning needs. In kindergarten, three lessons a week of 10-15 minutes are generally completed. Other grades typically require daily lessons of 20-30 minutes each. Pupils receiving instruction on such a schedule complete two blocks of the program in a school year.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the spelling program efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the programs effectively, and to conduct this training within the time conventionally available to school personnel. Also included in the installation system are materials for performing administrative functions related to the *SWRL/Ginn Spelling Program*.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 35 tryouts involving in the aggregate more than 750 classrooms and 20,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which they have been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance has been developed. As the tryout-monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and made available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

MATERIALS AND EQUIPMENT

SWRL/GINN COMPOSITION PROGRAM

A program for conducting sequential composition instruction for children in grades K-6

The *SWRL/Ginn Composition Program* provides research-based, classroom-verified resources for conducting sequential composition instruction. The performance-based program is organized into ungraded blocks of instruction, generally used in grades K-6.

Program outcomes develop a carefully designed sequence of skills leading to the fluency and clarity necessary for children to communicate using a variety of written forms. Early blocks of the program develop basic handwriting skills. The children systematically develop writing fluency to the level where they can plan and write short stories containing several well-punctuated sentences. Children practice carefully sequenced writing tasks that gradually increase in complexity until they are able to write entire story beginnings and create and write their own original endings.

Later blocks of the program teach students to communicate effectively using formats that include prose paragraphs, lists, stories, letters, and summaries. A plan-write-revise sequence is followed. Many activities involve group discussions in which students orally analyze compositions to discover what makes them effective and then plan similar compositions of their own. Editing and rewriting skills are stressed throughout the program.

SUBJECT AREA(S)

The program teaches a variety of composition skills to children in the elementary grades.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in grades K-6.

GOAL(S) OR PURPOSE(S)

Pupils participating in the *SWRL/Ginn Composition Program* develop numerous skills necessary for effective written communication. Program skills progress from writing letters and single words, to writing phrases and sentences, to writing creative compositions for a variety of purposes. Major skill areas include: Planning, analyzing, and summarizing; describing, informing, and persuading; and handwriting, punctuating, and editing.

PATTERNS OF USE

The program is organized into ungraded instructional blocks, each containing two units of instruction. Within each unit, there are three types of activities:

Instruction—Varied materials and procedures introduce and provide practice on the program outcomes.

Assessment—Criterion exercises identify the extent to which pupils have attained the program outcomes.

Supplementary instruction—Practice exercises provide supplementary instruction for individuals or groups of pupils who have not yet attained the unit outcomes.

The block structure of the program facilitates pupil placement, instructional planning, and grouping based on pupil attainment of specific program skills. Program resources enable the teacher to supplement planned activities in accordance with pupil interest and learning

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on sound information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific program skills. Suggestions are provided for assisting those pupils who might benefit from supplementary instruction.

The Composition Program Quality Assurance (QA) system includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The QA system also provides a means by which the pupil proficiency attained with the program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

Scheduling and length of lesson activities depend upon pupil learning needs and interests, and the amount of instructional time available. Each of the composition program blocks represents approximately one semester of instruction. Generally, pupils complete two instructional blocks during a school year when three 30- to 40-minute sessions of composition instruction are conducted weekly.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the composition program efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the program effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the installation system are materials for performing administrative functions related to the *SWRL/Ginn Composition Program*. For example, there are suggestions for: Conducting briefing sessions for school boards, parents, and community members; ordering and distributing materials; conducting followup training sessions for teachers; monitoring the operation of the program during the school year; and integrating the program with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 17 tryouts involving more than 3,000 classrooms and 90,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance has been developed. SWRL/GINN EXPRESSIVE LANGUAGE PROGRAM

A program designed to develop the oral language and expressive skills of elementary school children

The *SWRL/Ginn Expressive Language Program* provides research-based, classroom-verified resources for conducting instruction that develops oral language and expressive skills of elementary school children. The performance-based program is generally used in grades K-6.

The program outcomes develop a carefully designed sequence of skills important to both the academic and social development of children. In early blocks, children learn nonverbal expressive skills as they use movements, gestures, and facial expressions to portray various characters and situations. As the children gain confidence, they learn to read scripts and improvise dialog to convey a variety of moods and feelings, create entertaining story endings, and give short talks in a public-speaking format. In later blocks, students perform interpretative pantomime, further extend their story-creating skills, and present talks that persuade the listener or explain how to do something. They begin to act out fully scripted plays.

Program materials provide comprehensive resources for the teacher with no background or training in drama and public speaking and enhance the resources available to the teacher experienced in program areas.

Instructional resources combine flexible format and multimedia design. They provide classroom-verified options for development of expressive language skills. Materials including activity posters, dialog sheets, play scripts, story ideas, tongue twisters, paper puppets, story sheets, and audiotapes insure a rich variety of learning experiences.

Teacher materials provide suggestions for introducing specific expressive language skills, for conducting activities that promote attainment of the skills, and for effective utilization of all program resources during instruction.

The program is integrated into regular classroom instruction and is typically teacher-directed in large- or small-group instruction. Aides or other paraprofessionals can be used in directing small-group instruction.

SUBJECT AREA(S)

The program promotes development of specific oral language and expressive skills.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in grades K-6.

Program resources were designed for teachers with varying expressive language backgrounds. They provide comprehensive materials and procedures for teachers with little or no background in areas related to drama and public speaking, and enhance the instructional options of teachers who have expressive language experience.

GOAL(S) OR PURPOSE(S)

Program activities, designed to be enjoyable and meaningful for the pupil, promote skills in the following outcome areas:

1. Nonverbal Expression—The pupil uses gestures, movements, and facial expressions that accurately portray a given situation, story, or character, or are appropriate to a given talk.
2. Vocal Expression—The pupil speaks clearly with adequate volume and uses vocal expressions which appropriately communicate a given character, mood, or purpose.
3. Fluency—The pupil fluently and confidently verbalizes complete sentences without long pauses.
4. Planning—The pupil plans and presents stories and story endings that contain interesting problems and solutions (plots). In public speaking, the pupil plans talks that contain a beginning, middle, and end.
5. Verbal Content—The pupil creates and uses coherent dialog that follows a given story line. In talks, the pupil uses statements, examples, and reasons that accomplish a given purpose (e.g., to describe, instruct, persuade, inform).
6. Evaluation—The pupil states likes about performances and offers constructive suggestions for improvement.

PATTERNS OF USE

The program is organized into ungraded instructional blocks that contain two units per block. Within each unit, there are three types of activities:

1. Instruction—Program materials and procedures introduce and provide practice on the program outcomes.

2. Assessment—Criterion exercises identify the extent to which pupils have attained program outcomes.

3. Supplementary instruction—Practice exercises provide supplementary instruction for individuals or groups of pupils experiencing difficulty on the unit outcomes.

The block structure of the program facilitates pupil placement, instructional planning, and grouping based on pupil attainment of specific program skills. Program resources enable the teacher to supplement planned activities in accordance with pupil interest and learning.

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on sound information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific program skills. Suggestions are provided for assisting those pupils who might benefit from supplementary instruction.

The Expressive Language Program Quality Assurance (QA) System includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The QA system also provides a means by which the pupil proficiency attained with the program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

Scheduling and length of lesson sessions will vary with teacher judgment of pupil learning needs and the amount of instructional time available. Generally, pupils complete two instructional blocks during a school year, when three sessions a week are scheduled for the program (approximately 20 minutes per session for kindergartners and 30-40 minutes for subsequent grade levels).

IMPLEMENTATION PROCEDURES

The Training and Installation System includes the resources that enable a school district to install the *SWRL/Ginn Expressive Language Program* efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the program effectively, and to conduct this training within the time conventionally available to school personnel. Also included in the Installation System are materials for performing administrative functions related to the product.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 16 tryouts involving in the aggregate more than 2,600 classrooms and 78,300 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

SWRL/GINN BEGINNING READING PROGRAM (BRP)

A program to help children with sequential instruction in beginners' reading, generally used in kindergarten

The *SWRL/Ginn Beginning Reading Program* (BRP) provides research-based, classroom-verified resources for conducting sequential instruction in beginning reading. The performance-based program is generally used at the kindergarten level.

The program provides comprehensive materials and procedures that assist the teacher in promoting each child's reading skills. Program resources include storybooks, pupil practice exercises, comprehension exercises, suggestions for instructional games, assessment exercises and record sheets, a teacher's manual, and a resource kit including various flashcards and procedure cards.

Instruction in the program was designed to be a pleasant and successful experience for young children and to maximize their active participation in the learning process. Children have the opportunity to read many appealing short stories and to take part in a variety of instructional games. They receive personal copies of each storybook and are encouraged to use the books in practicing their newly acquired reading skills at home, as well as in the classroom.

Instructional support options accompanying BRP include the tutorial, parent-assisted learning, and summer reading programs.

SUBJECT AREA(S)

The program develops the reading competence of young children.

INTENDED USERS AND BENEFICIARIES

This program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been used successfully with a wide range of pupils in prekindergarten, kindergarten, and 1st grade.

GOAL(S) OR PURPOSE(S)

The majority of skills taught in the program can be classified under four outcomes to be attained by children:

(1) Words—The ability to read the 100 words taught directly in the program,

(2) Word Elements—The ability to identify 23 initial and ending word elements,

(3) Word Attack--The ability to sound out and read any one-syllable word composed of word elements taught in the program,

(4) Letter Names—The ability to name each letter of the alphabet, when shown the printed letter in either uppercase or lowercase forms.

The reading skills to be acquired by the children are listed explicitly throughout the program.

PATTERNS OF USE

The program is organized into 10 units to provide checkpoints for assessment of each child's progress. Instruction in each unit promotes basic reading skills through carefully planned and sequenced activities.

Three instructional support options accompany the program, enabling the teacher to utilize the structured assistance of parents, aides, and tutors.

(1) The Tutorial Program—Upper-grade pupils, aides, or other nonprofessionals are trained to use specially prepared materials and procedures to tutor kindergarten pupils. The tutorial program supplements regular classroom instruction in the BRP by providing additional practice for those children who have not yet attained program outcomes.

(2) The Parent-Assisted Learning Program (PAL)—PAL supplements regular classroom instruction in the BRP by providing the teacher with active and structured assistance from each child's parents. Each week the teacher sends home materials relating to instruction presented the previous week. Parents use instructional exercises and learning games that provide practice on the specific reading skills being developed by the teacher in the classroom.

(3) The Summer Reading Program—A 10-week, parent-guided summer program following the kindergarten year helps children maintain and improve the reading skills acquired in kindergarten. Sequenced materials and explicit instruction are provided for parents to follow.

ASSESSMENT PROVISIONS

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific reading skills. Practice exercises are provided for those pupils whose scores indicate they would benefit from supplementary instruction on program skills.

The BRP Quality Assurance System includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The system also provides a means by which the pupil proficiency attained with BRP can be credited in a manner that is understandable to parents and others interested in the schools.

TIME REQUIREMENTS

Scheduling and length of instruction activities depend upon teacher determination of pupil learning needs and the amount of instructional time available.

Previous use of the program indicates that most children attain the planned learning outcomes in 1 school year when approximately 3 weeks per unit and 25 minutes per day are allocated to BRP instruction.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the *SWRL/Ginn Beginning Reading Program* efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the program effectively, and to conduct this training within the time conventionally available to school personnel.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 57 tryouts involving more than 14,400 classrooms and 480,200 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance (QA) has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and are available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

SWRL/GINN READING PROGRAM

A program to assess the reading level of students in grades K-12

The *SWRL/Ginn Reading Program* provides research-based, classroom-verified resources for conducting instruction that helps children become effective independent readers. The performance-based program is organized into ungraded instructional blocks, generally used in grades K-3.

The program is based on three premises: (1) Spelling-to-sound correspondences are basic in learning to read, (2) the vocabulary for reading materials should match the vocabulary of the child, and (3) reading skills should be extended to tasks useful to the child in academic and personal endeavors.

Emphasis in the *SWRL/Ginn Reading Program* is on two classes of reading outcomes—word recognition and reading comprehension. In word recognition, pupils are taught to read most program words through a decoding process. The content and sequence of these decoding skills are based upon extensive linguistic research. The result is a unique reading program that takes maximum advantage of the phonetic regularities of the English language. The words that pupils read illustrate and provide practice for recently learned letter sounds. These letter sounds enable pupils to quickly decode a large number of frequently used words.

Throughout the program, comprehension activities are integrated with the word recognition content. Early emphasis is placed on the literal meaning of words and sentences already familiar to the pupil. By employing newly acquired decoding and comprehension skills in other program activities, pupils have frequent opportunities to extend their reading vocabulary. Upper blocks of the program emphasize more complex comprehension skills such as understanding words in sentence and paragraph contexts, and story interpretation. These comprehension activities are structured to give additional practice on previously taught word recognition skills.

Other program outcomes, including library reading, alphabetizing, and summarizing textual materials, extend pupils' reading activities into the broad reading environment in which they live. The program is designed to provide enjoyable and successful reading experience.

SUBJECT AREA(S)

The *SWRL/Ginn Reading Program* helps children develop the skills needed to become effective, independent readers.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in grades K-3.

GOAL(S) OR PURPOSE(S)

The program promotes independent reading skills in elementary school children. Program outcomes are: (1) To develop word-attack skills and (2) to develop comprehension skills. Word-attack proficiency includes learning decoding skills and sight words. Comprehension skills include study of word, sentence, and paragraph meanings in a variety of contexts. Instruction includes a wide array of literal and interpretive information-processing activities.

PATTERNS OF USE

The ungraded program is organized into eight instructional blocks. This organization facilitates pupil placement consistent with current reading skills. Each block consists of four to six units of instruction. Within each unit, there are three kinds of activities:

Instruction—materials and procedures introduce and provide practice on the program outcomes;

Assessment—criterion exercises identify the extent to which pupils have attained program outcomes; and

Supplementary Instruction—practice exercises provide supplementary instruction for pupils who have not yet attained specific unit outcomes.

The block structure of the program facilitates pupil placement, instructional planning, and grouping based on pupil attainment of specific program skills. Program resources enable the teacher to supplement planned reading activities in accordance with pupil interest and learning.

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on sound information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific Reading Program skills. Materials are provided for those pupils whose scores indicate they might benefit from supplementary instruction on program skills.

The Reading Program Quality Assurance (QA) System includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The QA System also provides a means by which the pupil proficiency attained with the Reading Program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

The scheduling and length of instructional lessons will vary with teacher judgment of pupil learning needs. The program is organized into eight ungraded blocks of instruction. When approximately 30 minutes of teacher-directed reading instruction is presented daily, pupils generally complete two blocks of instruction in a school year.

IMPLEMENTATION PROCEDURES

The Training and Installation System includes the resources that enable a school district to install the program efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the program effectively, and to conduct this training within the same time conventionally available to school personnel. Also included in the Installation System are materials for performing administrative functions related to the program.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 25 tryouts involving more than 1,800 classrooms and 53,700 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

SWRL/GINN ADVANCED READING PROGRAM

A program used in grades 4-6 which emphasizes critical reading

The *SWRL/Ginn Advanced Reading Program* provides research-based, classroom-verified resources for conducting reading instruction. The performance-based program is generally used in grades 4-6.

The program emphasizes critical reading and literary criticism and is appropriate for use with pupils who have attained basic word recognition and decoding skills. Critical reading outcomes relate to the student's ability to comprehend logical and persuasive techniques while reading. Instruction is designed to teach the nature of explanatory and logical development and to identify common persuasive writing techniques. Instructional content includes both descriptive and explanatory passages.

Literary criticism outcomes relate to the student's ability to identify and understand literary techniques used and their intended effects on the reader. Content for these outcomes is drawn from selected works of fiction containing examples of plot, setting, characterization, theme, and certain aspects of style.

Extended reading lessons have been designed to provide options that are responsive to different learner requirements. Students who have acquired the desired instructional concepts practice applying them in the wider range of reading materials available in the classroom, home, and library. Students having difficulty in attaining the instructional outcomes receive supplementary practice.

SUBJECT AREA(S)

Advanced reading skills emphasizing critical reading and literary criticism are promoted in the program.

INTENDED USERS AND BENEFICIARIES

The program was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been field tested with a wide range of pupils in grades 4-6.

The program goal helps beginning readers who have attained word recognition and decoding proficiency to become advanced readers. Pupils who have completed block 8 of the program, for example, have attained this proficiency.

GOAL(S) OR PURPOSE(S)

The *SWRL/Ginn Advanced Reading Program* has two major outcome areas: Critical reading and literary criticism. Critical reading outcomes relate to the student's ability to comprehend logical and persuasive techniques as they are read. Literary criticism outcomes relate to the student's ability to identify and understand literary techniques used and their intended effects on the reader. Students develop and use skills that allow them to describe, analyze, evaluate, and interpret what they have read.

PATTERNS OF USE

The program is organized into ungraded instructional blocks. This organization allows pupils to be placed in the program at the point most appropriate to their current level of reading ability. Each block contains 4 instructional units of 8-15 lessons each.

Classroom instruction generally relates to five activities that recur throughout the lessons:

Introduction—Tells the students what they are going to learn about and why it is important.

Defining the concept—Gives the students an explanation of the concept, including its defining characteristics.

Acquiring the concept—Gives students practice in identifying the concept.

Applying the concept—Provides materials for students to use in practicing the outcome independently. The concept is practiced in the context of stories and poems as well as arguments, essays, articles, and charts.

Extending the concept—Encourages students to use their newly acquired skills in their outside reading.

Extended reading lessons—Provide instructional options that are responsive to differing learner requirements.

The block structure of the program facilitates pupil placement, instructional planning, and grouping based on pupil attainment of specific program skills. Program resources enable the teacher to supplement planned reading activities in accordance with pupil interest and learning.

ASSESSMENT PROVISIONS

Placement materials and procedures facilitate assignment of pupils to instructional blocks based on sound information regarding pupil skill attainment.

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific reading program skills. Suggestions are provided for assisting those pupils who might benefit from supplementary instruction on program skills.

RD 030 006

The Quality Assurance (QA) System includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The QA System also provides a means by which the pupil proficiency attained with the Reading Program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

Lesson scheduling and length will vary with the complexity of the outcome, the emphasis the teacher wishes to place upon the outcome, and teacher judgment of pupil learning needs.

The program is organized into eight ungraded blocks of four instructional units each. A unit includes 8-15 lessons, generally requiring 45-60 minutes of classroom time. Pupils typically complete two blocks of instruction during a school year.

IMPLEMENTATION PROCEDURES

The Training and Installation System includes the resources that enable a school district to install the Advanced Reading Program efficiently and effectively. For example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the programs effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the Installation System are materials for performing administrative functions related to the *SWRL Advanced Reading Program*. For example, there are suggestions for: conducting briefing sessions for school boards, parents, and community members; ordering and distributing materials; conducting followup training sessions for teachers; monitoring the operation of the program during the school year; and integrating the program with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 18 tryouts involving more than 50 classrooms and 1,300 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance as related to compliance with extant codes in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as Quality Assurance has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and available for sharing with parents. This information has proved especially useful in furthering parent/school communication and in fostering parental support.

TEACHING STRATEGIES IN COMMUNICATION

A package for 9th-grade students who are not succeeding in the usual language arts approaches

Strategies in Communication was originally designed for 9th-grade students who were not succeeding in the language arts taught by the traditional approaches. The program is now designed to be used in a regular classroom, without the necessity of segregating the so-called "slow learners." It provides a valuable experience for all students.

The materials in this package include a manual for teachers, strategy guides, student strategies, and a listening record.

The teacher's manual gives the teacher the background of the project, a full description of the techniques used in the teaching strategies, a description of how to use the strategies, a list of program and course goals, an appendix on the use of role playing in the classroom, an appendix of models, and a table of contents listing objectives for all the strategies and an index to the manual and the strategy guides.

There are 117 strategy guides in interaction, listening, speaking, reading, and writing. Each strategy is on a separate card for easy reference and various combinations.

Learning strategies for students in inexpensive pads accompany the guides so that they may be given to students and serve as introductions and guidelines for their participation. They are not workbook or programed exercises, but rather guides which allow students to select their own learning objectives, activities, and evaluation strategies. A record of sounds in various groupings is provided, with suggestions for a number of uses.

The instructional design allows for complete individualization of learning activities, with teachers and pupils able to select themes or topics for interaction and individuals selecting or designing their own learning strategies and pursuing their own unique interests. The teacher uses the teaching strategies for motivation and exploration, while the students use their learning strategies for specific activities.

SUBJECT AREA(S)

This is a set of language arts materials including listening, speaking, reading, and writing.

INTENDED USERS AND BENEFICIARIES

The intended users are junior high school students, grades 7 to 9, who are not succeeding in traditional English courses.

The field test indicated that the materials, if selected properly, can be effective at any of the above grade levels with students of any ability.

GOAL(S) OR PURPOSE(S)

The program goals are to aid the teacher in the promotion of student growth and helping the student: (1) To learn that a student's own perceptions, experiences, and values—a personal world view—are valid measures of what the student hears and reads; (2) to develop responsibility for a student's own learning; (3) to recognize a student's own responsibility to the group; (4) to gain and improve skills in group communications processes; (5) to gain respect for the fruitful exchange of ideas; (6) to gain a workable understanding of the dynamics of reading, writing, speaking, and listening; (7) to gain a meaningful experience in identifying the exploring issues and in making decisions; and (8) to learn various approaches to learning, interpreting, and measuring information.

In addition, there are 117 specific behavioral objectives, one for each strategy, all of which support the program goals.

PATTERNS OF USE

Teaching Strategies in Communication is intended for supplementary classroom use as an extra resource for teachers and students who want and need to individualize their programs. They are organized in a sequence in order to systematically build toward broader concepts and more highly developed skills. However, no particular sequence is necessary.

ASSESSMENT PROVISIONS

Each teaching strategy has a list of evaluation suggestions for teacher use at the conclusion of the learning activities which reference each objective. Teachers are encouraged to assist students in planning their own assessment.

TIME REQUIREMENTS

Some activities take as little as 15 or 20 minutes, while others could grow into extended sequences lasting several class periods of 40 or 50 minutes each. The strategies are flexible.

IMPLEMENTATION PROCEDURES

The strategies are mostly content free; they can be used in conjunction with an almost infinite array of curricular materials. This attempt to provide the teacher with strategies which are instructionally sound is, therefore, compatible with numerous curriculums.

The strategies articulate well with any number of class organizational plans. In the field test, they were used in self-contained homerooms, departmentalized arrangements, cross-grade groupings, and team situations.

The strategies were designed to be free of specific media requirements. Equipment and other materials readily available in every junior high school can and should be used with the strategies. For example, all field test teachers had cassette players and recorders available and were able to use regular library and other materials existing in their schools. The strategies are not dependent on any one specific piece of equipment or set of books.

Personnel training costs would be minimal, although inservice support would enhance the use of the strategies. Because some teachers expressed a feeling of inadequacy in carrying on group activities suggested by strategies like role playing, small discussion sessions, and dramatizations, a set of interaction strategies was added to help teachers establish a classroom climate for interaction.

ASSURANCES AND CLAIMS

Assurances

The materials were reviewed inhouse for fairness to human subjects and were found not to be harmful or place any individual, sex, or group at risk.

Claims

The materials have been used and studied carefully in more than 30 classrooms and have been reviewed by content experts. Classroom teachers who used the materials and the experts who reviewed them agreed that the package was one of the best collections of a variety of activities for teaching language arts of which they were aware. Most teachers reported that the materials worked well as a supplement to their regular curriculum and style of teaching. Of the teachers completing an analysis of the materials, 96 percent said the materials had merit, 75 percent thought the product met needs not addressed by other existing materials, and 81 percent said they would recommend them to a fellow teacher.

The comments of teachers and experts indicated that the materials did contribute toward achieving student involvement and responsibility goals. The materials also provided a variety of suitable activities and guidelines which were viewed as a valuable support and aid for the teacher who wanted to use group-teaching techniques. When used as a supplementary curriculum, teachers found the materials interesting, relevant, and challenging. A detailed evaluation report for the materials is available from the developer upon request. Indications for minor revisions of the materials based on evaluation data are included in the report.

All field test teachers were selected randomly throughout the Pacific Northwest. The materials were found to be transportable to rural, city, and suburban sites without special teacher education or other installation activities.

PRE-READING SKILLS PROGRAM (PRS)

A program which insures that children will be ready to learn to read when they begin formal reading instruction

The *Pre-Reading Skills Program* (PRS) is an instructional program developed to prepare kindergarten children to learn reading. PRS represents a new approach to reducing reading failure. It is based on the conviction that with proper instruction prior to formal reading, a significant number of reading failures can be avoided. The program does not teach reading; rather, it insures that children will be ready to learn to read when they begin formal reading instruction.

The selection of skills taught in PRS is based on more than 5 years of research on the reading process and on learning to read. To be included in the program, a skill had to meet two basic criteria: A direct relationship to the reading process or to learning to read, and a high correlation with reading success. In addition, a skill was selected if a significant number of children lacked it when entering kindergarten. Five visual and sound skills form the basis of instruction for PRS: Letter order, letter orientation, word detail, sound matching, and sound blending. In addition to these five skills, sound-picture association, letter-sound correspondence, and rhyming are taught in PRS.

The center's research showed that abilities in these prereading skills vary widely within a group of children, thus implying that an individualized program is necessary to meet each child's needs. Individualized instruction is, therefore, a fundamental concept of PRS.

The instructional program to teach the five skills consists of a wide variety of interesting activities. For each skill, the child is guided from simple concrete applications of the skill to more complex and abstract applications. The instructional program includes large-group, small-group, and individual activities. Large-group instruction is used primarily to introduce new concepts and materials. Individual activities, which include take-home games (games that children make in school and keep), are used to reinforce the skills. However, the primary means of instruction in PRS is small-group games. Children are assigned to games according to their individual needs. Small-group games are the instructional focus of PRS not only because they provide a means to individualize instruction, but also because they actively involve a child in learning the skills. Small-group games also give the child valuable social experiences and aid in the development of a positive attitude toward reading.

PRS is easy for a teacher to implement. The sequences of activities to teach the skills are presented in two separate schedules—one for visual skills and one for sound skills. Each activity listed in the schedule is described on a card in the teacher's resource file. PRS teacher's materials are designed to assist a teacher in effectively individualizing instruction. There are a diagnostic test to determine each child's skill needs and a management system to help the teacher keep track of each child's progress.

SUBJECT AREA(S)

Subject areas are reading readiness and prereading skills.

INTENDED USERS AND BENEFICIARIES

PRS was developed as an instructional program for kindergarten children. However, it is also used with older and younger children who need instruction in prereading skills.

Although PRS was designed to be used with English-speaking students, it is currently being used with approximately 275 children whose primary language is Spanish. The developers feel that, with minor adaptations, this program will benefit children in this special target audience. These adaptations are currently being made.

GOAL(S) OR PURPOSE(S)

The goals of PRS are: (1) To teach children the five prereading skills, thus insuring that children have the ability to match letters, letter strings, or printed words, taking into account the orientation and order of the letters and the full configuration of the words; the ability to match words on the basis of constituent sounds and to decide whether a given word contains a particular sound; and the ability to blend sounds into real words using letters as stimuli for the sounds; (2) to accustom children to a reading environment so that they feel comfortable with reading instruction; (3) to acquaint children with the vocabulary used in beginning reading instruction and a variety of books, stories, and other language art materials; and (4) to insure that children acquire a positive attitude toward reading.

PATTERNS OF USE

The instructional activities to teach the five skills are organized into two independent schedules, and for each skill there is an independent unit or sequence of activities. The three units to teach the three visual skills comprise the visual schedule, and two units to teach the two sound skills comprise the sound schedule. Within each visual-skill unit, the lessons are sequential, but the three skill units may be done in a variety of orders. Information for determining the most appropriate order of instruction for the three visual skills is provided in the teacher's guide folders. Within each of the sound-skill units, the lessons are also sequential; but, unlike the visual units, the two sound units must be done in the order in which they appear in the sound schedule.

PRS is an individualized program which children may move through at their own pace. They may skip any of the visual and sound skill units, based on the results of the diagnostic test that is included in the program.

There are many ways to schedule PRS into the daily curriculum. One way is to allot a 20- to 30-minute block of time daily for the lesson. Another way is to allot less time specifically for PRS activities and to integrate selected program activities into different areas of the curriculum. A third way to use the program is to incorporate the activities into a learning-center approach.

PRS is a self-contained instructional system. Each activity listed in the sound and visual schedules is keyed to an activity card which describes the purpose, group size, materials, and procedures for doing the activity. All the materials necessary for the activities are included in the kit.

ASSESSMENT PROVISIONS

PRS uses two types of assessment—formal and informal. Formal skill assessment is done with the skills tests, which consist of individually administered tests for each of the five prereading skills. The skills test booklet contains a single test for each of the skills, a practice test, and an administrator's manual. Each test is a diagnostic criterion-referenced test. A teacher may use the skills test to determine whether children need instruction in a specific skill. The skills tests may also be used to determine whether children need to participate in PRS or whether the children are ready to begin formal reading instruction; if the children master four of the five skills tests, they have the necessary visual and auditory skills to begin reading instruction. Informal assessment is done by evaluating children as they play games, do practice sheets, and learn sound-picture and letter-sound correspondences. Informal assessment of activities shows the children's levels of development for a specific skill and whether the children are succeeding with materials at those levels. An evaluation criterion is provided for each activity. Mastery of an activity is recorded on each of the children's record card.

TIME REQUIREMENTS

The sequences of activities for the sound and visual skills in PRS are given separately so that the teacher has maximum flexibility in incorporating the program into the kindergarten curriculum. Most teachers use PRS 5 days a week, alternating daily between visual and sound activities. Some teachers prefer to use PRS only 3 to 4 days a week, doing a visual activity 1 day and a sound activity the next. Other teachers use PRS 3 days a week and do both a sound and visual activity each day.

Most lessons in PRS are designed to take about 20 minutes a day. However, early in the year, the lessons are shorter to accommodate children's short attention spans, while lessons later in the year may be as long as 30 minutes. The length of time any one child spends daily on PRS activities will depend on the amount of instruction the child requires for mastery of a skill, as well as the organizational methods adopted by the teacher.

IMPLEMENTATION PROCEDURES

Information from the 1974-75 field test of teacher training techniques indicates that a teacher can implement PRS using only the information in the teacher's materials. The teacher's guide folders provide all the information a teacher needs to be able to implement the program, including step-by-step procedures for starting PRS. However, a preservice workshop will aid a teacher in beginning PRS, and it is recommended that a workshop be held if a number of teachers in one area will be using PRS.

Summary Cost Information

One PRS kit containing enough materials for 1 teacher and 60 children (2 kindergarten sessions) can be purchased for $455. The continuation costs of yearly consumable items (record cards, sound-picture cards, and letter-sound cards) is $52.40 for 64 children—which averages less than $0.90 per child. The continuation cost of ditto masters, which are consumable every 2 years, is $20.95.

Personnel Required for Product Adoption and Implementation

A classroom teacher can implement PRS without any special training.

ASSURANCES AND CLAIMS

Assurances

All the PRS materials have been designed to be free of racial, sexual, and other biases and have been submitted to qualified consultants to verify this. During 4 years of field testing, information gathered from teachers has never included reports of possible harm associated with the program.

PRS is self-contained and can be used by teachers with no special training, as evidenced by its current use in 32 States. Most of the teachers using PRS have had no instructional or informational contact with the developers beyond the teacher's guide folders included in the PRS kit. Studies in progress indicate that there is no major difference in implementation between these teachers and teachers who have taken part in an inservice workshop. However, a 1/2-day preservice workshop will decrease the teacher's initial burden in starting the program.

Claims

PRS has a substantial positive effect on children's achievement on prereading skills. In an evaluation study of over 170 children sampled from 43 classes, children who used PRS scored significantly higher than nonusers on 2 types of measures, 1 measure based on the program tests and another based on a standardized reading readiness test. That study also showed that children retain the skills taught in PRS between kindergarten and 1st grade. In addition, PRS was found to be especially effective for children who would not otherwise develop the prereading skills and would, therefore, have difficulty in learning to read.

PRS is enjoyed by children, appreciated by parents, and supported and endorsed by teachers and principals. These attitudes have been reported by teachers in an extensive questionnaire and interview survey. These teachers state that children look forward to the program activities, choosing them during their free playtime. In response to materials the children take home, parents frequently voice their appreciation in being informed about the program and in being given games to play at home with their children. Teachers feel the program is worthwhile, practical to implement, and completely equipped. Principals have commented to center staff that they are pleased with the 1st-grade reading performance of children who have had PRS.

The claims that the prereading skills stressed in PRS are necessary and sufficient for success in reading instruction awaits results of long-range evaluation. Studies have established part of this claim; namely, that few children who are reading successfully at the end of the 1st grade fail to show mastery of these skills. Thus, the prereading skills are logically necessary for reading success.

The research base for the *Pre-Reading Skills Program* is an important factor in its development. Development at the Wisconsin Research and Development Center assures the quality of the initial research studies and of the 4 years of field-test evaluations. The research for the program has been described in 15 reports; most of which have also been published in scholarly journals. The complete developmental history of the program has also been documented and is reported in seven technical reports.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
1 PRS kit including student and teacher materials	1 kit per kindergarten classroom (1 teacher and 2 sessions of children)	445.00 (subject to change)	Reusable except consumable materials listed below:	
Student materials including games, books manipulatives, record, sound picture cards, and letter sound cards			Sound picture and letter sound cards replaced yearly;	
Teacher materials including schedule book, resource file, diagnostic test, teacher's guide folders, management system (including student record cards), ditto masters, and class charts			student record cards replaced yearly; ditto masters replaced every 2 years

AVAILABILITY

PRS was copyrighted in 1974 by the Board of Regents of the University of Wisconsin System and is currently available from the publisher.

An adaptation of specific PRS materials for Spanish-speaking children is being planned. The estimated date of completion for the preliminary version is September 1976.

An awareness brochure about PRS is available from Encyclopedia Britannica Educational Corporation (EBE). A filmstrip presenting a general overview of PRS is presently being developed by EBE, although it is not yet known whether the filmstrip will be available to the general public. An implementation filmstrip entitled "Small Group Games" has been developed at the Wisconsin Research and Development Center. PRS demonstration sites are presently being identified. WISCONSIN DESIGN FOR READING SKILL DEVELOPMENT (WDRSD): WORD ATTACK

A program which enables the teacher to focus instruction on specific reading development of students in grades K-6

The *Wisconsin Design for Reading Skill Development* (WDRSD) is an objective-based management system that provides structure and substance for an elementary school reading program, kindergarten through grade 6. It provides the basis for a skill-oriented approach to the teaching of reading and is based on the assumption that mastery of essential subskills will contribute to successful reading performance. To state objectives for reading instruction is to specify what teachers want children to learn. Writing objectives permits teachers to focus instruction for each child and thus to facilitate the child's learning. Focusing skill instruction demands that the teacher know: (1) Which skills are essential, (2) where each child is in the development of skills, and (3) what is available to teach those specific skills.

The word attack element of the design enables the teacher to systematize and focus instruction on the specific reading skills that will help the child decode words independently. Forty-five skills, organized into four levels and described in terms of behavioral objectives, comprise the word attack element. These four levels, A-D, correspond roughly to grade levels K-3.

The word attack components are: (1) A criterion-referenced instrument for each of the skills which allows the teacher to ascertain where each child is in the development of these abilities; (2) a pupil profile card which lists all 45 skills, and serves as the major means of recordkeeping for each individual child; (3) the teacher's resource files which aid the teacher in the organization of instructional materials for each skill (in addition to providing references to previously published commercial materials and providing recommended activities, these files serve as repositories into which materials and activities can be inserted by each teacher).

The materials are designed to assist teachers in their efforts to individualize instruction by focusing on skills. In practice, a teacher determines the appropriate instructional level for each student by administering the criterion-referenced tests. After the test results are recorded on the pupil profile cards, the teacher forms instructional skill groups according to the needs of each child. Then, employing the teaching techniques most suitable for that teacher's personality and abilities as well as for students' individual learning styles, focused skill instruction begins. Following the instructional period, students are assessed with the criterion-referenced mastery test available for each skill; upon mastery of a skill, the pupil cards are used to regroup students for instruction in a new skill.

Thus, individual progress is monitored as students move from skill to skill and from one level to the next as each subsequent level is mastered. Upon completion of all four word attack element skill levels, the student will be able independently to attack phonically or structurally regular words and will recognize all common irregular Dolch list words.

SUBJECT AREA(S)

Reading

Within each level of the word attack element, the skills and objectives are clustered and sequenced into three major types of word decoding strategies: Sight word vocabulary, phonic analysis, and structural analysis. Skills and objectives to develop each of these strategies are presented at each level. In addition to these three major word attack strategies, selected traditional readiness skills are developed at levels A and B.

INTENDED USERS AND BENEFICIARIES

Elementary teachers who work with students in grades K to 3 are the primary users of the word attack element. Although it is assumed that the essential skills in word attack will be introduced to the average child in the early elementary school years, many teachers in grades 4 to 6 have used the materials with their students. Likewise, reading teachers have found that these materials can profitably be used with disabled readers at all age levels.

RD 030 009

GOAL(S) OR PURPOSE(S)

The purpose of this system is to organize instruction to enable children to attack independently phonically and/or structurally regular words and to recognize all common irregular Dolch list words.

PATTERNS OF USE

This instructional system may be used in a multiunit organizational framework or in a traditional self-contained classroom. Word attack may be implemented at any grade level if the teacher feels the child needs the particular skills. The level of instruction of each child is determined by the criterion-referenced tests. Skills are taught sequentially from one level to the next, and a child progresses to the next level only by mastering all skills at the previous level. However, the skills within a level are not arranged in a strict hierarchy so there is flexibility in sequencing instruction. The *Wisconsin Design* provides the skill development aspect of the total reading program, and it can be used in addition to the regular reading program of the school. On the other hand, the design objectives can serve as the basis for the reading program, in which case provision must be made for systematic and extensive application of the skills.

ASSESSMENT PROVISIONS

Thirty-nine of the 45 skills are assessed by the use of criterion-referenced tests which are paper-and-pencil and group administerable with two parallel forms. For the remainder of the skills, a written test is either not appropriate or not definitive. Therefore, guidelines for individual performance tests are provided. Throughout, teachers are encouraged to be aware of informal written and oral observations to assess the child who does not perform well in formal assessment situations.

Assessment procedures include: (1) Break-in testing to determine the instructional level of each student (the first level administered is determined by teacher judgment based on all available information), (2) retesting to find the instructional level of a child who may have been inappropriately tested the first time, (3) posttesting after skill instruction to determine whether the specific skill has been learned to the criterion set locally, and (4) pretesting after completion of skill instruction at one level to determine whether the student has "picked up" any skills at the next higher level.

Break-in testing and retesting are done only once; posttesting and pretesting are repeated as needed, using parallel forms of the tests.

TIME REQUIREMENTS

Skill instruction for 25 minutes per day, approximately 2 hours per week for 2 to 3 weeks, is recommended for each skill not previously mastered. For the average child the program should be completed by the end of the 3d grade if instruction begins at the kindergarten year, level A of the word attack objectives.

IMPLEMENTATION PROCEDURES

Teacher communication, organization, cooperation, and flexibility are required if the word attack element is to be successfully implemented. Teacher inservice time is required at the local level: Prior to implementation, inservice time is necessary to acquaint each teacher with the system and is again important after the teachers have begun implementing the system. Inservice should be provided to help teachers schedule instruction and catalog locally available materials and teacher-developed activities for appropriate skills. Based on the center's model for implementation of IGE and its components, these types of inservices are optionally available through the center or National Computer Systems of Minneapolis, Minnesota. Changes in the physical environment are not required; however, to make the most efficient use of teacher time, teacher cooperation in the sharing of students is most desirable. This requires advance scheduling and planning and flexibility in organization.

MATERIALS AND EQUIPMENT

Although it is desirable to have an extra person available to aid the teacher, the system does not require extra personnel for implementation. If this extra help is provided, special training is not required. However, implementation would be facilitated if these people were to participate in a 3-day workshop. If outside assistance is needed, the publisher/distributor provides special consultants for a fee.

A starter kit which contains sufficient quantities of materials for 4 teachers and up to 175 students, grades K to 3, is available from the publisher/distributor. The cost of this kit is $275. Spirit masters that are needed for the remainder of the year cost $102. Therefore, initial cost for implementation of word attack is approximately $377 for 175 students. The cost per individual student for the first year is $2.15. Beyond this initial year, the continuation cost is $0.57 per individual student.

ASSURANCES AND CLAIMS

Assurances

Over 4,000 schools in 48 States of the United States integrate 1 or more elements of the *Wisconsin Design* into their reading curriculums. There have been no reports that use of the word attack element has had any harmful effects on students or teachers. Every effort has been made to eliminate content which could in any way be interpreted as perpetuating biases relating to religion, age, sex, or socioeconomic status. If a potential user feels any such bias does exist in materials for any skill, the user is encouraged to delete this material and add more pertinent material to the teacher's resource file folder.

Although many users attend a 3-day workshop offered by the publisher/distributor prior to beginning implementation of the design, many others do not. Inservice in each school district is essential for effective implementation, but that inservice can be efficiently accomplished on a completely local level.

Claims

Conceptualization of the word attack element of the *Wisconsin Design* was done with extreme care, proceeding from a study of current practices and relevant reading research to review and evaluation by reading specialists and practitioners. From this emerged sequentially arranged strands of skills. Each strand represented instructionally important, consensually validated skills which were then stated as measurable and instructable behavioral objectives. The quality of the conceptualization of the *Wisconsin Design* has been confirmed by an independent panel of experts.

All materials developed in the word attack element were prepared and reviewed by highly trained specialists in curriculum, measurement, and evaluation. Development of the tests and instructional materials followed the center's established model of empirical tryouts, pilot tests, and field tests over a period of 5 years. Appropriate revisions were made. The commercial version reflects the program alterations dictated by logical and empirical validation techniques. Commercial publication was not authorized until the project and evaluation staff members were convinced that the program was of the highest quality. An independent comparative study has confirmed this judgment.

Field tests conducted by the center and studies conducted by other educational agencies confirm that both urban and nonurban students in several sections of the country who are instructed with the design word attack are able to master the program objectives at acceptable criterion levels. Students who are instructed in the program perform better on program objectives than students who are not. Year-to-year school-wide improvements in skill acquisition occur in schools implementing the program. Furthermore, students who complete the word attack element perform substantially better on the terminal objective than students at the same level who have not completed the program.

Although norm-referenced test results are of lesser concern to the design that attainment of program objectives, field tests conducted by the center have shown that urban and nonurban students who are instructed in the program perform on relevant standardized measures as well as or better than students in the same school performed prior to implementation of the program.

The center conducted two field tests which indicated that the element can be effectively implemented in a wide range of elementary schools without substantial assistance from the developers.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Tests, levels A-D	1 per child plus extras for retesting	Available only in package of 35; tests individually range .25-.56	Consumable with each use	
Spirit masters	1 set per school	102.00	Consumable yearly	
Pupil profile cards	1 per child	Available only in package of 100; individual card, .07	Reusable throughout program	
Rationale and Guidelines	1 per school	5.00	Reusable	
Test administrator's manuals, levels A-D	1 per level for each 35 students at that level	1.00 per level	Reusable	
Teacher's Planning Guide: Word Attack	1 per teacher	3.00	Reusable	
Teacher's Resource File: Word Attack	1 per 3-4 teachers	20.00	Reusable	
Teacher's Resource File: Word Attack, Supplement No. 1	1 per 3-4 teachers	12.50	Reusable	
Card notcher	1 per 2 teachers	10.00	Reusable	
Card skewer	1 per 3-4 teachers	1.25	Reusable

Wayne Otto, Principal Investigator

AVAILABILITY

The *Wisconsin Design for Reading Skill Development: Word Attack* element was copyrighted in 1972 by the Board of Regents of the University of Wisconsin System for the Wisconsin Research and Development Center for Cognitive Learning. This copyright is claimed until 1980. The word attack materials are available from:

National Computer Systems/Educational Systems Division
4401 West 76th St.
Minneapolis, Minn. 55435

A specimen set which provides a sample of the various components of word attack is available from NCS/Educational Systems Division at a cost of $5. A series of 12 filmstrips, each dealing with a specific topic of introduction to the *Wisconsin Design*, may be purchased from NCS for $100. NCS offers free 1/2-day orientation sessions to acquaint interested individuals with the rudiments of the *Wisconsin Design*.

More comprehensive information can be acquired by attending a 3-day implementation workshop. These workshops are designed to train key school district personnel who in turn will offer inservice sessions for teachers in their own community. The cost of such a workshop is $95. In addition to the instruction, participants receive some design materials.

INFORMATION CURRENT AS OF MARCH 1975 ■

WISCONSIN DESIGN FOR READING SKILL DEVELOPMENT (WDRSD): STUDY SKILLS

Behavioral objectives that a child must master to read maps, graphs, and tables

The Wisconsin Design for Reading Skill Development (WDRSD) is an objective-based management system that provides structure and substance for an elementary school reading program, kindergarten through grade 6. It provides the basis for a skill-oriented approach to the teaching of reading and is based on the assumption that mastery of essential subskills will contribute to successful reading performance. To state objectives for reading instruction is to specify what teachers want children to learn. Writing objectives permits teachers to focus instruction for each child and thus to facilitate children's learning. Focusing skill instruction demands that the teacher know which skills are essential, where each child is in skill development and what is available to teach those specific skills.

The study skills element of the WDRSD is composed of 71 skills organized into 7 levels and described in terms of behavioral objectives which specify for the teacher the essential skills a child must master in order to competently read maps, graphs, and tables, and to efficiently use reference sources.

Study skills components include: 1. A criterion-referenced instrument for each skill allows the teacher to ascertain where each child, grades K-6, is in the development of these abilities; (2) a unique recordkeeping system—pupil profile cards—allows the teacher to monitor each child's skill development; and (3) a teacher's resource file folder for each skill organizes available materials, some of which are references to previously published commercial materials, others of which are recommended teacher activities, that allow for focused skill instruction.

The teacher first administers the criterion-referenced tests for the skills according to the appropriate levels of the students. After the test results are recorded on the pupil profile cards, the teacher forms instructional skill groups according to the established developmental needs of each child. Specific, focused skill instruction then begins, employing the teaching techniques most suitable for that teacher's personality, abilities, and competencies.

Instruction for the subskills of the study skills element begins at the individual's level with continuous progress dependent upon the student's capacity to master skills. With completion of the highest level of study skills, the child should have attained mastery of the terminal, or broad, objective of the study skills element.

SUBJECT AREA(S)

Reading, social studies, mathematics and language arts.

The Study Skills element of the *Wisconsin Design for Reading Skill Development* is divided into three broad areas: Maps, graphs and tables, and reference skills. Each of these areas is further subdivided to enable teachers to focus instruction properly on each of the subskills. The subskills for developing mapreading abilities are those identified specifically for understanding the principles of representation, orientation, and measurement. The progression of subskills for graph and table reading includes direct extraction of information, comparisons, interpolations, projections, and problem solving. Reference subskills include those which center on utilization, location, organization, and evaluation of a variety of resource materials.

INTENDED USERS AND BENEFICIARIES

Elementary school teachers who work with children of all abilities in grades K-6 are the primary users of the study skills element of the *Wisconsin Design.* Although designed for use in the elementary school, the study skills objectives have been used and are being used by junior high teachers as well. There have been no formal field tests of implementation at the postelementary-school level.

GOAL(S) OR PURPOSE(S)

The purpose of this system is to organize instruction which will enable the child to learn: (1) To derive information from maps, graphs, and tables; (2) to competently use standard reference sources; and (3) to independently locate and make use of information from several types of sources.

PATTERNS OF USE

This K-6 instructional system may be used in a multiunit organizational framework or a traditional self-contained classroom. The student may begin using the program at any grade level with criterion-referenced assessment determining the instructional level. Skills are taught sequentially from one level to the next, and a child progresses to the next level only by mastering all skills at the previous level. However, the skills within a level are not arranged in a strict hierarchy, so there is flexibility in sequencing instruction. It is possible to implement the Study Skills instruction during the time of the school day set aside for reading instruction. Owing to the diverse nature of the skills, however, some teachers prefer to teach map skills during the social studies time allotment, graphs and tables in the mathematics time segment, and reference skills during the language arts period. The skills for any of the three areas of the Study Skills can be used as an instructional base or as an instructional monitor depending upon the specific school situation. In general, published materials already available in the school are sufficient to instruct for any one particular skill. The focusing of instruction on that one skill allows more efficient use of those materials.

ASSESSMENT PROVISIONS

Each of the 71 skills in the program is assessed by the use of a criterion-referenced test. For most skills, a paper-and-pencil, group-administerable test is available. For many skills, two parallel forms exist for each skill. For some skills, a formal, written test would not be appropriate; thus guidelines for individually assessed performance are provided. Throughout, teachers are encouraged to be aware of informal written and oral observations to assess the child who does not perform well in formal assessment situations. The assessment procedures include: (1) Break-in testing to determine the instructional level of the student (the first test level administered is determined by teacher judgment based on all available information), (2) retesting to find the instructional level of the students inappropriately tested previously, (3) posttesting after instruction to determine whether the skill has been mastered at the level selected locally (80 percent is recommended), and (4) pretesting after completion of skill instruction at one level to determine whether the student has "picked up" any skills at the next higher level. Break-in testing and retesting are done only once; posttesting and pretesting are repeated periodically as needed, using parallel forms when available.

TIME REQUIREMENTS

Skill instruction for 25 minutes per day, approximately 2 hours per week for 2 to 3 weeks, is recommended for each skill not previously mastered. The length of time needed for an individual to complete all of the study skills objectives is determined by: (1) The instructional level at entry, (2) the individual learning capacity of each child, and (3) whether instruction is properly focused. For the average child, if instruction begins at the kindergarten year with level A of the study skills objectives, the program should be completed by the end of grade 6.

IMPLEMENTATION PROCEDURES

Teacher communication, organization, cooperation, and flexibility are required if the study skills element is to be successfully implemented. Teacher inservice training is mandatory. Prior to implementation, inservice time is necessary to fully acquaint the teacher with the system. Once the program is implemented, inservice time is necessary to schedule instruction and to become familiar with, and properly catalog to the appropriate skill, all locally available published materials and all locally developed teacher activities.

No changes need be made in the physical environment of the school. To make the most efficient use of teacher time, however, teacher cooperation in the sharing of students is most desirable. This requires advance scheduling and flexibility in organization.

Following the Wisconsin R & D Center model for implementation of IGE and its components, these inservices are optionally available from the Wisconsin R & D Center or National Computer Systems, Minneapolis, Minnesota.

Summary Cost Information

The publisher/distributor has made available a Starter Kit which contains sufficient quantities of materials for 6 teachers and up to 245 students, grades K-6. The Starter Kit costs $396. Spirit masters, for use throughout the remainder of the year, amount to $96. The total amount is $492, or about $2 per child.

Beyond the initial year, the continuation cost per individual student for the same size school would be approximately $0.45 per pupil.

Personnel Required for Adoption and Implementation

This program may be adopted without additional personnel; however, it is desirable to appoint one person to coordinate the implementation efforts. This person can direct the implementation without training, but implementation is facilitated by attendance at a 3-day workshop. Consultants are available through the publisher/distributor at quotable rates.

ASSURANCES AND CLAIMS

Assurances

One or more elements of the *Wisconsin Design* are used with more than 1,250,000 children in over 4,000 schools in 48 States. The developers and publishers have not received reports of harmful effects resulting from the use of the study skills element or any other element of the design.

Every effort has been made to eliminate content which could, in any way, be interpreted as perpetuating biases relating to religion, age, sex, or socioeconomic status. If a potential user feels any such bias does exist for any skill, that user's own materials can and should be added to the teacher's resource file folder for that skill.

Although many users attend a 3-day workshop offered by the publisher/distributor prior to beginning implementation of the design, many other users do not. Inservice in each school district is essential for effective implementation, but inservice can be efficiently accomplished on a completely local level.

Claims

1. Conceptualization of the study skills element of the *Wisconsin Design* was done with extreme care, proceeding from a study of current practices and relevant reading research to review and evaluation by reading specialists and practitioners. From this product emerged sequentially arranged strands of skills. Each strand represented instructionally important, consensually validated skills which were then stated as measurable and instructable behavioral objectives. The quality of the conceptualization of the Wisconsin Design has been confirmed by an independent panel of recognized experts.

2. All materials developed in the study skills element were prepared and reviewed by highly trained specialists in curriculum, measurement, and evaluation. Development of the tests and instructional materials followed the Wisconsin R & D Center's established model of empirical tryouts, pilot tests, and field tests over a period of 4 years. Revisions were made when data indications required them. The commercial version reflects the program alterations dictated by logical and empirical validation techniques. Commercial publication was not authorized until the design project and R & D Center evaluation staff members were convinced that the program was of the highest quality. An independent comparative study has confirmed this judgment.

3. Since the *Wisconsin Design* is a criterion-referenced system of consensually validated skills, the major evaluation question to be answered is whether the program is able to meet its own objectives. Field tests conducted by the R & D Center confirm that both urban and nonurban students in several sections of the country who are instructed with Wisconsin Design Study Skills are able to master the program objectives at acceptable criterion levels. Students who are instructed in the program perform better on program objectives than students who are not instructed in the program. Further, year-to-year, schoolwide improvements in skill acquisition occur in schools implementing the program.

4. Although norm-referenced test results are of lesser concern to the design than attainment of program objectives, field tests conducted by the R & D Center have shown that urban and nonurban students who are instructed in the program perform on relevant standardized measures as well as, or better than, students in the same school prior to implementation of the program.

5. Being a tightly designed, complex reading management system, a critical question is whether the design can be implemented in schools without substantial assistance from the developers. The Research and Development Center conducted two field tests to ascertain whether such implementation is possible. Evidence indicates that the element can be effectively implemented in a wide range of elementary schools without the presence of Research and Development Center staff. It should be noted that this program has been enthusiastically accepted by teachers and administrators.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Tests, levels A-D	1 per child plus extras for retesting	Available only in package of 35; tests individually range .25-.77	Consumable each time unit is used	
Tests, levels E-G	1 per child plus extras for retesting	Available only in package of 35; tests individually range 1.37-1.71	Reusable	
Answer sheets, tests, levels E-G	1 per child plus extras for retesting	Available only in package of 100; individual sheet .11	Consumable each time unit is used	
Spirit masters for retesting, all levels	1 set per school	96.00 total for set	Consumable yearly	
Pupil profile cards	1 per child	Available only in package of 100; individual card .07	Usable throughout program	
Rationale and Guidelines	1 per school	5.00	Reusable	
Test administrator's manuals, levels A-G	1 per level for each 35 students at that level	1.00 per level	Reusable	
Teacher's planning guide: Study skills	1 per teacher	3.00	Reusable	
Teacher's resource file: Study skills	1 per 3-4 teachers	26.00	Reusable	
Card notcher	1 per 2 teachers	10.00	Reusable	
Card skewer	1 per 3-4 teachers	1.25	Reusable

WISCONSIN DESIGN FOR READING SKILL DEVELOPMENT (WDRSD): SELF-DIRECTED, INTERPRETIVE AND CREATIVE READING

The basis for a skill-oriented approach to the teaching of reading in grades K-6

The *Wisconsin Design for Reading Skill Development* (WDRSD) is an objective-based management system that provides structure and substance for an elementary school reading program, kindergarten through grade 6. It provides the basis for a skill-oriented approach to the teaching of reading and is based on the assumption that mastery of essential subskills will contribute to successful reading performance. To state objectives for reading instruction is to specify what teachers want children to learn. Writing objectives permits teachers to focus instruction for each child and thus to facilitate the child's learning.

Six areas of essential skills have been identified in the design: Word attack, comprehension, and study skills; and self-directed, interpretive, and creative reading skills. The self-directed, interpretive, and creative reading areas differ from the first three in that the objectives for these skills are expressive or descriptive, as opposed to being behavioral or prescriptive.

The components of the program are designed to be used by the teacher. They include: (1) Teacher's planning guide—contains the expressive objectives and overview for each element, an explanation of the components, and suggestions for possible methods or implementation; (2) pupil profile card—used for monthly or yearly recording of the number of exposures for each pupil with regard to each skill; (3) wall chart—used to record daily or weekly exposures for each child in the classroom with regard to each element; and (4) teacher's resource file—48 folders, each of which contains activity suggestions for teachers to use in exposing pupils to the skills. There is one folder for each skill at each level. There are three levels; and at each one there are five skills in self-directed reading, six in interpretive reading, and five in creative reading.

In order to implement the program, a teacher identifies an appropriate time during the day (e.g., language arts class) when one or more pupils may focus on a skill. The teacher selects the skills by checking a wall chart to determine the area of skills to which each child has had the least exposure. The teacher then consults the teacher's resource files, selects one or more appropriate activity suggestions, gathers or makes any suitable materials, and presents the lesson to the child or group of children. Some activities may be performed independently by the student. After the activity is completed, the exposure is recorded on the classroom wall chart. At the end of the month or year, pupils' recordings for all the skills are transferred to their individual profile cards.

SUBJECT AREA(S)

Self-Directed, interpretive, and creative reading

Subject areas include: Selecting books automatically, reading rate and purpose, following directions, self-direction, library use; writer's purpose, fact or fiction, character traits, emotional reactions, imagery, figurative language, story outcomes; and dramatization, oral/musical interpretations, personal narrative, written expression, and visual expression.

INTENDED USERS AND BENEFICIARIES

The product is designed to be used by all elementary school children. There are activity suggestions at each of three levels which pertain to children at a certain age/grade: the A to C activities are appropriate for grades K to 2; the D to E are for grades 3 and 4; and F to G, for grades 5 and 6. The developers feel, however, that the skills at levels F to G are also appropriate for junior high pupils, and the activities for that level would need only minimal adaptation for use with 12- to 14-year-old.

GOAL(S) OR PURPOSE(S)

The purposes of the *Self-Directed, Interpretive, and Creative Reading* are: (1) To provide a basis for a skill oriented approach to the teaching of expressive objectives; (2) to help teachers systematize and focus their instruction; (3) to help students focus on their learning tasks; (4) to provide both the teacher and student with an invitation to explore issues of particular interest to them; and (5) to permit a focus on all of the important aspects of reading instruction for which there are intended, yet unassessable, results.

RD 030 011

PATTERNS OF USE

This K-6 instructional program may be used in a multiunit organizational framework or a traditional self-contained classroom. In *Self-Directed, Interpretive, and Creative Reading* the developers recommend that each child be exposed to every skill (at the child's level) a minimum of three times per year. For example, a child in 2d grade would be exposed three times each to the five skills in self-directed reading at levels A to C, the six skills in interpretive reading at levels A to C, and the five skills in creative reading at levels A to C. There is no sequencing of skills or of activity suggestions either among the three elements or within any one element. The produce may be used as a specific focus for a language arts class or as a supplement for students not currently involved in instructional groups for basic skills such as word attack.

ASSESSMENT PROVISIONS

No assessment instruments were developed for *Self-Directed, Interpretive, and Creative Reading*. Expressive objectives merely describe a behavior as opposed to prescribing it. The results are not expressed in common objectives since they are related to each individual's own abilities. No screening or placement is necessary in implementing the program since all pupils are exposed to the same skills, but they work according to their own capacity.

TIME REQUIREMENTS

Self-Directed, Interpretive, and Creative Reading is designed to be used from the beginning of kindergarten through grade 6. The child is exposed 3 times to each of 16 skills during each year of school. An exposure consists of a child doing an activity that provides an opportunity to practice a skill (e.g., predict an outcome of a story). These activities may vary in length from 5 minutes to 1 hour. Because of such diversity, and because many activities can be done independently by the student, specifying a total time in terms of numbers of hours would have little meaning.

IMPLEMENTATION PROCEDURES

Implementation may be carried out by the classroom teacher, intern, aide, or librarian. Communication among all staff members is important in an individualized program since scheduling of skill times and locations, students, and preparation time is important. The program works most effectively if the staff shares ideas and experiences regarding the skills. Although the areas of this product are included in the implementation workshops for the *Wisconsin Design* and a general understanding of the design is highly desirable for implementation, the program can easily be installed without attending these workshops.

MATERIALS AND EQUIPMENT

Total product installation, on the basis of a 1:25-30 teacher-to-pupil ratio in an elementary school of 600, would approximate $0.47 per pupil. Successive annual costs would approximate $50, or $0.08 per pupil.

ASSURANCES AND CLAIMS

Assurances

The information gathered from the field test of the materials which involved 1,500 pupils in 3 schools indicates that the materials can stand alone in the hands of a competent teacher and can be successfully implemented without additional aid beyond that given in the teacher's planning guide. The developers and publishers have not received any reports of harm associated with the use of this product.

Activity suggestions in the teacher's resource file have been carefully scrutinized to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content. Any question of such material in the folders would cause an appropriately directed review of the materials by a qualified person from outside of the program. The materials are revised to eliminate such shortcomings.

Claims

Conceptualization of the *Self-Directed, Interpretive, and Creative Reading* element of the *Wisconsin Design* was done with extreme care, proceeding from a study of current practices and relevant reading research to review and evaluation by reading specialists and practitioners. From this emerged sequentially arranged strands of skills. Each strand represented instructionally important, consensually validated skills which were then stated as measurable and instructable behavioral objectives. The quality of the conceptualization of the *Wisconsin Design* has been confirmed by an independent panel of experts.

All materials developed in the *Self-Directed, Interpretive, and Creative Reading* elements were prepared and reviewed by highly trained specialists in curriculum, measurement, and evaluation. Development of the tests and instructional materials followed the center's established model of empirical tryouts, pilot tests, and field tests over a period of 5 years. Revisions were made when data indicated that they were required. The commercial version reflects the program alterations dictated by logical and empirical validation techniques. Commercial publication was not authorized until the project and evaluation staff members were convinced that the program was of the highest quality. An independent comparative study has confirmed this judgment.

The center conducted a pilot study which determined that this program can be implemented without assistance from the developers.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Pupil profile card	1 per child	7.00 per package* of 100	Usable throughout program	
Teacher's planning guide	1 per teacher	2.00	Reusable	
Teacher's resource file	1 per 4 teachers	28.50	Reusable	
Wall chart	1 per teacher	2.00	Consumable yearly

THE SPELLING PROOF PROGRAM (SPRUF)

A program that requires the student to choose the correctly spelled work from a set to complete an analogy or a sentence

The Spelling Proof Program (SPRUF) is a computer-assisted spelling program that requires the student to choose the correctly spelled word from a set of distractors to complete an analogy or a sentence. The distractors used in the program are frequent misspellings of the target word (based on errors found in paper-and-pencil tests), homophones, and misspellings containing plausible phonetic alternatives. Practice is also provided in the selection of homophones appropriate to semantic contexts. The student selects the correct spelling and is provided immediate feedback. Incorrect items are saved and presented again later in the instructional session. Students work in the program until every item has been answered correctly once.

There is a total of 17 SPRUF lessons that can be used as stand-alone instructional resources. They provide computer-assisted instruction for certain units of the off-line Kottmeyer and Ware spelling curriculum, but could be coordinated with other textbook series as well. Teachers assign the program by writing the appropriate lesson name on a flowchart which contains directions to the student for entering and using the program. When the student completes the program, a percentage score is given, and the student writes this score on the back of the flowchart. The percentage score reflects the student performance level in the program and is used to provide feedback to the classroom teacher.

SPRUF can be used either independently or with any or all of the other learning resources available in the Computer Assisted Elementary Spelling Program. These are: SPLPAT, which teaches alternative spellings for the same sound; DPSPEL, which provides practice in spelling root words and adding prefixes and suffixes; and TRYSPL, which permits students to generate multiple spellings and select the one that "looks" correct.

SUBJECT AREA(S)

The subject area is basic spelling skills, specifically, homophones.

INTENDED USERS AND BENEFICIARIES

The prime users include elementary school students (grades 2-6) and junior high students in remedial reading and spelling.

GOAL(S) OR PURPOSE(S)

A child successfully completing this program is expected to be able to select the correct spelling for the appropriate semantic context and to be able to select the correct spelling from a set of plausible alternative spellings for the same sound.

PATTERNS OF USE

Teachers assign the program when the child reaches a target unit contained in the textbook spelling program. The child then works individually at a computer terminal until a lesson is completed; that is, until every item in the lesson is answered correctly once.

The program can be used to supplement any elementary school spelling curriculum and contains words of appropriate difficulty for children in grades 2-6. Patterns of use depend on teachers' chosen methods of implementation and on individual student spelling proficiency.

ASSESSMENT PROVISIONS

The program provides for pretesting and posttesting to assess spelling mastery. A child's first pass through the items in the computer-assisted program serves as a pretest, or teachers can assign the program when a child has failed to demonstrate mastery on an offline cassette-led pretest. Upon completion of the program, the child takes an off-line cassette-led posttest. A percentage score reflecting the student's levels of performance is fed back to the teacher through the record on the back of the student flowcharts.

TIME REQUIREMENTS

An average lesson takes about 20 minutes. With 17 lessons, 5.3 instruction hours are typically required to complete the entire program. Students usually complete a lesson in one session at the terminal.

IMPLEMENTATION PROCEDURES

To use SPRUF, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype-compatible cathode-ray tube (CRT) and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. A month of expert programing would be required to adapt the program to local time-sharing systems.

Teacher orientation requires approximately 15 minutes, and each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performing within the program. Students work individually on the program, so any school organization that allows for students to work at their own pace on different objectives within the same classroom can support work on the program.

ASSURANCES AND CLAIMS

Assurances

During 2 years of operation in a school setting, no observations were made of harm to students as a result of using the program. Students are treated uniformly, regardless of race or sex. The content of the program is sentences and words, and there are no sex, racial, age, socioeconomic, or religious biases.

At the field-test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites once an initial implementation plan is devised.

Claims

Many children who did not demonstrate mastery on a pretest of a selected homophone unit were able to demonstrate mastery on a posttest after receiving practice on SPRUF. The number of children demonstrating mastery after SPRUF was identical to the number receiving an off-line paper-and-pencil prescription on the unit.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student flowcharts	17 per student	.10	Consumable yearly	
Teacher resource sheet	1 per teacher	1.00	Reusable	
Computer program	1 per computer system	Cost of duplication	Reusable	

Note: The required computer hardware, software, and time-sharing systems necessary to implement the program in a school are described under "Implementation Procedures." Implementation of this program requires either a consultant or school district personnel to plan its use in the context of a classroom spelling program. Assistance in planning for implementation is available from the developer.

THE DRILL AND PRACTICE SPELLING PROGRAM (DPSPEL) (PART OF THE COMPUTER ASSISTED ELEMENTARY SPELLING PROGRAM)

A program that provides practice in spelling root words and adding prefixes and suffixes

The Drill and Practice Spelling Program (DPSPEL) is a computer-assisted spelling program that provides practice in spelling root words and adding prefixes and suffixes. Lessons are of two general types: Application of structural rules, which includes forming and adding regular noun plurals or verb past tense or third singular; and vocabulary building lesson, where the affixed form must be discovered through sentence clues and then spelled.

To elicit a word to be spelled, the computer console displays a sentence such as "Make the -ing form of trap." The root word is highlighted by asterisks. The child spells the affixed form—"trapping"—and is given immediate feedback on the correctness of the spelling. Misspelled words are presented again for more practice, and the lesson ends when the child has typed a correct spelling for each word. Practice is provided in both directions, from root to derived form and vice versa.

The lessons are coordinated with the offline individualized Kottmeyer and Ware spelling curriculum. Computer-assisted instruction is available for 18 of the textbook units. Teachers assign the program by writing the appropriate lesson name on a student flowchart that contains directions to the student for entering and using the program. Student completion of the program is indicated on the back of the flowchart, which the student returns to the teacher.

DPSPEL can be used independently or with one or all of the other learning resources in the Computer Assisted Elementary Spelling Program. These are: SPRUF, which teaches children to select the correct spelling from a set of similar but incorrectly spelled words; SPLPAT, which teaches alternative spellings for the same sound; and TRYSPL, which teaches children to generate alternative spellings and select the one that "looks" right.

SUBJECT AREA(S)

The subject area is basic spelling skills; specifically, structural and lexical spelling rules.

INTENDED USERS AND BENEFICIARIES

The prime users include elementary school students (grades 2-6) and junior high students in remedial reading and spelling.

GOAL(S) OR PURPOSE(S)

Children using DPSPEL successfully are expected to be able to spell a root word and its affixed form correctly.

PATTERNS OF USE

Students may be assigned this program when they reach units in the textbook series for which computer-assisted instruction is available. They work individually at a computer terminal until a lesson is completed; that is, until every item in the lesson is answered correctly once. In addition, individual words within the program can be accessed for concentrated practice.

The program can be used to supplement any elementary school spelling curriculum and contains words of appropriate difficulty for children in grades 2-6. Patterns of use depend on teachers' chosen methods of implementation and on individual student spelling proficiency.

ASSESSMENT PROVISIONS

The program contains its own pretest. An offline cassette-led posttest can be used, or the pretest routine can be reaccessed to assess mastery.

TIME REQUIREMENTS

An average lesson takes 33 minutes. With 18 lessons, there is typically a total of 10 hours of instruction.

IMPLEMENTATION PROCEDURES

To use the program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype compatible cathode-ray tube (CRT) and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. A month of expert programing would be required to adapt the program to local time-sharing systems.

Teacher orientation requires approximately 1/2 hour, and each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performing within the program. Students work individually on the program, so any school organization that allows students to work at their own pace on different objectives within the same classroom can support work on the program.

ASSURANCES AND CLAIMS

During 2 years of operation in a school setting, no observations were made of harm to students as a result of using the program. Students are treated uniformly, regardless of race or sex. The content of the program is sentences and words, and there are no sex, racial, age, socioeconomic, or religious biases.

The program is in its third year of use at the Oakleaf School. Teachers continue to use it regularly as children place in the target units. At this field test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

RD 030 014

THE TRY SPELLINGS PROGRAM (TRYSPL) (PART OF THE COMPUTER ASSISTED ELEMENTARY SPELLING PROGRAM)

A program that allows children to generate multiple spellings for a word they wish to spell and then choose one that looks correct

The Try Spellings Program (TRYSPL) is a computer-assisted spelling program that permits children to generate multiple spellings for a word they wish to spell, then choose the one that "looks" correct. Immediate feedback is provided, and the correct spelling of the word is printed. It is designed for use in grades 2-6 as an important component of off-line spelling curriculum. There are 19 different TRYSPL lessons, each containing an average of 16 words.

The program was suggested by the Simon and Simon theory of spelling performance, which holds that spelling is in part a generate-and-test-process, i.e., alternative spellings of a word are generated and compared with visually encoded information used to recognize words in reading. The program is designed to provide practice in the second stage of spelling performance, the visual evaluation stage.

Teachers use TRYSPL in conjunction with various units of standard offline spelling curriculums or in tandem with SPLPAT, which teaches alternative spellings for selected phonemes. Teachers assign the program by writing the appropriate lesson name on a student flowchart which contains directions to the student for entering and using the program. When the student completes the program, a percentage score is given, and the student writes his score on the back of the flowchart. The percentage score reflects the student performance level in the program and is used to provide feedback to the classroom teacher.

TRYSPL may be used independently, with SPLPAT, or with any of the other learning resources available in the computer assisted elementary spelling program. These are: SPRUF, which teaches children to select the correct spelling from a set of similar but incorrectly spelled words; and DPSPEL, which provides practice in spelling root words and adding prefixes and suffixes.

SUBJECT AREA(S)

The subject areas are basic spelling skills; specifically, generating and testing alternative spellings.

INTENDED USERS AND BENEFICIARIES

The prime users include elementary school students (grades 2-6) and junior high students in remedial reading and spelling.

GOAL(S) OR PURPOSE(S)

Students using TRYSPL are given practice which enables them: (1) To manage spelling processes effectively, e.g., to generate and test when needed; (2) to learn that visual recognition information can be used to supplement recall in spelling; and (3) to apply information about plausible phonetic alternatives to the generation of alternative spellings.

PATTERNS OF USE

The lessons are arranged to be used as followup activities to SPLPAT (which teaches alternative spellings for sounds). Since the lessons were initially designed to follow instruction in phoneme-to-alternative-grapheme mapping, the words in TRYSPL contain the specific sounds taught in SPLPAT. Most lessons contain words of a level of reading difficulty appropriate to grades 4 and above.

The program need not be used exclusively in conjunction with SPLPAT. In fact, teachers generally prefer to use the two programs independently, prescribing them on the basis of perceived learner needs.

The program can be used to supplement standard elementary school spelling curriculums or as a stand-alone program for practice in generation and selection of correct spellings.

ASSESSMENT PROVISIONS

There are no pretests for this program. Teachers are free to use it according to their own assessment of student needs. Percentage scores reflecting the students' levels of correct responding are fed back to the classroom teacher through the student flowcharts to aid the teacher in this evaluative and prescriptive process.

TIME REQUIREMENTS

An average lesson takes about 40 minutes. With 19 lessons, approximately 13 hours are typically required to complete the entire program.

The lessons are often used on an assigned-time basis. Students work on a lesson for about 20 minutes, stop, and return to the program in the next few days. The computer automatically enters the student at the point at which the last session was terminated. The style of use depends upon individual teachers.

IMPLEMENTATION PROCEDURES

To use the program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype-compatible cathode-ray tube (CRT) and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. A month of expert programing would be required to adapt the program to most local time-sharing systems.

Teacher orientation requires approximately 1/2 hour, and each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performing within the program. Students work individually on the program, so any school organization that allows students to work at their own pace on different objectives within the same classroom can support work on the program.

ASSURANCES AND CLAIMS

Assurances

During 2 years of operation in a school setting, no observations were made of harm to students as a result of the program. Students are treated uniformly, regardless of race or sex. The content of the program is sentences and words, and there are no sex, racial, age, socioeconomic, or religious biases.

At the field test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites.

Claims

TRYSPL appears to have practical utility in spelling. Some children can increase their scores by generating several spellings and choosing among them rather than accepting their single first-produced spelling. Gains of up to 13 percent in spelling test scores are attributable to use of the program. There are, however, differences in the effectiveness of this procedure among individual children.

MATERIALS AND EQUIPMENT

THE SPELLING PATTERNS PROGRAM (SPLPAT) (PART OF THE COMPUTER ASSISTED ELEMENTARY SPELLING PROGRAM)

A program teaching the concept that a target sound can be spelled by alternative letters or graphemes

The Spelling Patterns Program (SPLPAT) is a computer-assisted spelling program which teaches the concept that a target sound or phoneme (e.g., /K/) can be spelled by alternative letters or graphemes (/K/, /CK/, /C/). It is designed for use in grades 2-6 as an important component of standard off-line spelling curriculum. There are 16 different lessons that teach 21 different phoneme-to-alternative-grapheme mappings. The program has been used in two ways—as prerequisite instruction prior to practice in generating alternative spellings provided by another computer-assisted spelling program (TRYSPL) or as remedial instruction for poorer spellers who require review and maintenance instruction in basic spelling generalizations.

The program was suggested by the Simon and Simon theory of spelling performance, which holds that spelling is in part a generate-and-test process, e.g., alternative spellings of a word are generated and compared with visually encoded information used to recognize words in reading. The program is designed to teach the first stage of spelling performance, the generation stage.

The teaching strategy is that of guided discovery and is implemented by the finding-counting-sorting teaching routines: (1) Finding words with a target phoneme out of a larger set of words, (2) counting the number of different spelling patterns that represent the sound in the sample of words, and (3) sorting the sample of words into a columnar array according to the spelling patterns they contain. These instructional routines are generalizable and can be applied to teach other kinds of content. As with all computer-assisted programs, there is immediate feedback and branching appropriate to the nature of the student's answer.

SPLPAT lessons can be coordinated with standard off-line individualized spelling curriculums. Teachers assign the program by writing the appropriate lesson name on a student flowchart which contains directions to the student for entering and using the program. When the student completes the program, a percentage score is given, and the student writes this score on the back of the flowchart. The percentage score reflects the student performance level in the program and is used to provide feedback to the classroom teacher.

SPLPAT can be used independently or with one or all of the other learning resources in the computer assisted elemtnary spelling program. These are: SPRUF, which teaches children to select the correct spelling from a set of similar but incorrectly spelled words; DPSPEL, which provides practice in spelling root words and adding prefixes and suffixes; and TRYSPL, which permits students to generate multiple spellings and select the one that "looks" correct.

SUBJECT AREA(S)

The subject area is basic spelling skills, specifically, mapping sounds to spelling patterns.

INTENDED USERS AND BENEFICIARIES

The prime users include elementary school students (grades 2-6) and junior high students in remedial reading and spelling.

The program can also be used as a training device for research and development staff who develop Computer-Assisted Instruction (CAI) programs, inservice teacher training institutes, and graduate education programs in various specialties (e.g., curriculum design).

GOAL(S) OR PURPOSE(S)

SPLPAT provides instruction and practice designed to enable the student: (1) To relate written words in terms of similar spelling patterns, (2) to relate spoken words in terms of similar sounds, and (3) to generate at least two different plausible spellings based on the sound of a word.

PATTERNS OF USE

The lessons are arranged primarily in order of the reading difficulty of the word instances and secondarily according to the difficulty of the target sound. There is room for rearrangement within the three grosser categories of easy, medium, and hard. Lessons are not tightly sequenced, nor are they cumulative.

The program can be used to supplement any standard elementary school spelling curriculum or can be used as a stand-alone program for teaching the specific phoneme-to-grapheme mappings contained in the lessons. It can also be used as preparation for practice in generating alternative spellings to provide knowledge of plausible alternatives.

ASSESSMENT PROVISIONS

There are no pretests for this program. Teachers are free to use it according to their own assessment of student needs. Percentage scores reflecting the students' levels of correct responding are fed back to the classroom teacher through the student flowcharts to aid the teacher in this evaluative and prescriptive process.

TIME REQUIREMENTS

An average lesson takes about 50 minutes. With 16 lessons, approximately 13 hours are typically required to complete the entire program.

The lessons are often used on an assigned-time basis. Students work on a lesson for about 20 minutes, stop, and return to the program in the next few days. The computer automatically enters the student at the point at which the last session was terminated. The style of use depends upon individual teachers.

IMPLEMENTATION PROCEDURES

To use the program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype-compatible cathode-ray tube (CRT) and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. A month of expert programing would be required to adapt the program to most local time-sharing systems.

Teacher orientation requires approximately 1/2 hour, and each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performing within the program. Students work individually on the program, so any school organization that allows students to work at their own pace on different objectives within the same classroom can support work on the program.

ASSURANCES AND CLAIMS

Assurances

During 2 years of operation in a school setting, no observations were made of harm to students as a result of using the program. Students are treated uniformly, regardless of race or sex. The content of the program is words and spelling patterns, and there are no sex, racial, age, socioeconomic, or religious biases.

At the field test site, the program operates with minimal producer intervention, so it is likely that the program will operate successfully at other sites.

Claims

Preliminary study suggests that instruction on the program appears to influence the quality of alternative spellings generated in a set of transfer words. Instruction encourages use of the plausible alternatives, e.g., the ones that are taught by the program. Definitive statement of the program's effectiveness awaits further study.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student flowcharts	16 per student	.10	Consumable yearly	
Teacher resource sheet	1 per teacher	1.00	Reusable	
Computer program	1 per computer system	Cost of duplication	Reusable	

Note: The required computer hardware, software, and time-sharing systems necessary to implement the program in a school are described under "Implementation Procedures." Implementation of this program requires either a consultant or school district personnel to plan its use in the context of a classroom spelling program. Assistance in planning for implementation is available from the developer.

SWRL LANGUAGE ANALYSIS PACKAGE

A computer-assisted package which enables the user to reduce textual data to a form amenable to analysis

For years there have been packaged sets of computer programs in statistical areas. These packages have made available sophisticated generalized computational and analytic capabilities in a form especially suited for easy use by researchers whose basic orientation is not that of computer science. The *SWRL Language Analysis Package* (LAP) offers analogous service for the analysis of textual data. Just as a social scientist can use a package like BMD or SPSS to analyze numerical data, a linguist or language researcher can use LAP to analyze textual data; convert the textual data to a form amenable to statistical analysis; and prepare references such as indexes and concordances.

The LAP consists of a group of modularly structured computer programs, coordinated and integrated into a cohesive package. A nontechnical user's manual is available that describes the capabilities of LAP and the mechanics of its use. A simple user language has been developed to facilitate the translation of user processing requirements into machine compatible form.

The package includes file manipulation functions of sorting, merging, comparing, and selecting. Any file may be reformatted into a readable table with user-specified headings and variable column arrangement. It performs various indexing, statistical, and content-analysis functions.

Carefully constructing the package in a highly independent modular manner, LAP developers have made it easy for individual routines to be "unplugged" and replaced when a more efficient or powerful routine is made available or when a new approach dictates new combinations of functions. Thus, the system will be dynamic and open-ended, capable of being easily updated to keep pace with the state of the art.

SUBJECT AREA(S)

Analysis of textual data in any subject area is the subject area.

INTENDED USERS AND BENEFICIARIES

LAP opens up sophisticated language analysis capability to the novice, which heretofore required highly specialized training. It is of benefit to the academic school and publishing communities in particular.

GOAL(S) OR PURPOSE(S)

The goals of this program are to offer generalized computational capabilities for the analysis of textual data in a form especially suited for easy use by inquirers whose basic orientation is not that of computer science.

PATTERNS OF USE

Language processing typically involves inquiry where the output of one program must serve as the input to another step of processing. Such linkages are easily facilitated with LAP where one single and consistently structured command language may be used to communicate.

LAP provides the inquirer with many options, permitting one to select precisely and easily only the functions of interest. The inquirer is not limited to simply an exclusive "or"-type selection where one must choose either a key word in context (KWIC) list or an index. It is possible, for example, to produce KWIC's and frequency counts on certain words while simultaneously producing an index and a frequency count of every word in the text.

IMPLEMENTATION PROCEDURES

LAP is currently resident at the computer centers of SWRL and UCLA. Interested inquirers may use the package by telecommunication or by batch mail. The computer software is also available for installation on other computers.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
User's manual	Access by user	5.00	Archival	
Computer software	Access by user	Public domain		

DEVELOPER/AUTHOR:

SWRL Educational Research and Development
4665 Lampson Ave.
Los Alamitos, Calif. 90720

AVAILABILITY

The package is accessible at the SWRL and UCLA computer centers, and computer software is available for installation on other configurations. SWRL claims common law copyright on these materials.

COLOR KEYS TO READING (FORMERLY CALLED STEPPING STONES TO READING)

A program based on the concept that symbols presented to the beginning reader must be limited

Color Keys to Reading is based on the concept that in order to teach the beginning readers to respond to a wide variety of visual symbols, the number of symbols presented to them must be limited or controlled in some way. During the past decade, several reading programs have worked toward accomplishing such control by limiting phonemes and graphemes, limiting the number of words presented to the learner, or introducing special symbols that regularize grapheme-phoneme relationships. This product is designed to accomplish control of symbols through color-coding. It emphasizes a phonics approach to the decoding process as the primary strategy to be used by the beginning readers until they are able to replace it with syntactic and semantic cues in the written text. The program, by using color-coding, has been able to aid decoding without limiting vocabulary or altering traditional orthography. It is unique in sequencing sound-to-sight or auditory-to-visual materials in such a way that the various visual representations of vowel sounds can be introduced simultaneously, thereby allowing for the introduction of a more extensive vocabulary than is usual for beginning reading programs.

The program consists of a prereading workbook and auditory pretraining exercises, 12 readers and alternate readers, 8 supplementary readers, and 12 workbooks. Each of the readers in the program is divided into teaching pages (pages on which the vocabulary is presented) and stories in which this vocabulary is practiced. In addition to the above materials, teacher's guidebooks have been prepared containing procedures, suggestions, and techniques for optimizing the use of readers, workbooks, and supplementary materials. Assistance and instruction about coordinating other language-arts skills (specifically, handwriting and spelling) with the program are included in the guidebooks.

The teaching method used is a phonics approach—beginning with word analyses (involving a response for each element of the word) followed by blending of the elements. The general outline of the procedures used in presenting the material is as follows:

(1) Letter-sound association—The teacher guides the children in identifying the new phoneme and associating it with the printed letters

(2) Vocabulary study—The teacher guides the children in decoding and defining color-coded word lists on the teaching page by sounding and blending

(3) Practice—Children read color-coded stories containing the new vocabulary and do associated workbook exercises.

The product has special features which facilitate teaching and learning. When consonant graphemes are introduced, each represents only one sound. Phonemes are introduced sequentially on the basis of the frequency of the appearance of their printed representations in the text.

Unsounded or silent letters, such as the "b" in "lamb," are printed in a different type style. Materials are printed in a special font which has been modified to minimize visual confusions, such as between the letters "h" and "n." Each of the first 11 vowel phonemes is associated with a color, and the multiple graphemic representations of the vowel are printed in that color (e.g., the "e" in "he," the "ea" in "meat," and the "y" in "happy" are all printed tan). Each color association is taught, used in stories, and is systematically withdrawn from the text.

The workbooks have been designed to parallel the sequence of materials and provide a major vehicle for transfer to regular print. They have been printed using the chemical process "Write and See." When the child marks the correct answer in a box in the workbook, the box changes color, thereby allowing the child to obtain immediate feedback.

SUBJECT AREA(S)

Color Keys to Reading is a beginning reading program. With a heavy emphasis on phonics, the program is designed to ease the decoding problem for beginning readers in a way that allows them to acquire a relatively large vocabulary. It is a self-contained program individualized by degree of structure and method.

INTENDED USERS AND BENEFICIARIES

Students of all abilities in grades K-2 who are learning beginning reading in English are the intended users.

GOAL(S) OR PURPOSE(S)

A student successfully completing this program is expected: (1) To acquire a reading vocabulary to 2,000 words, (2) to be able to discriminate the critical differences among visually different forms and to be sensitive to where these differences occur, (3) to be able to use the sound-symbol relationship of elements within words to decode those words, and (4) to learn "phonic rules" (either explicitly or implicitly) and their applicability.

PATTERNS OF USE

Color Keys to Reading is a self-contained program, individualized by degree of structure and method. It may be used as part of a curriculum in beginning reading for students in grades K-2. Assistance and instruction in coordinating other language-arts skills (specifically, handwriting and spelling) with the program are included in the teacher's guidebooks.

ASSESSMENT PROVISIONS

Diagnostic tests are provided for each of the 12 levels of the program. These tests are used to determine whether, in going to the next level, the student should use the version with the special color coding or the version printed in standard black-and-white type.

TIME REQUIREMENTS

When integrated into a conventional school's normal reading period, the program can be completed in 1 to 1-1/2 school years.

IMPLEMENTATION PROCEDURES

The program can be used in many kinds of classrooms and requires no special teacher training, staffing, or facilities. Teacher's guidebooks contain procedures, suggestions, and techniques for optimizing the use of readers, workbooks, and supplementary materials. Assistance and instruction in coordinating other language-arts skills (specifically, handwriting and spelling) with the program are included in the guidebooks.

Personnel Required for Product Adoption and Implementation

No special personnel are required. A classroom teacher without special training can implement this program.

ASSURANCES AND CLAIMS

Assurances

Color Keys to Reading (formerly *Stepping Stones to Reading*) is the result of a working arrangement between a publisher (Meredith Corporation, Appleton-Century-Crofts/New Century Educational Division) and a research and development center (The Learning Research and Development Center) in which the publisher was one of the original contributors of funds for basic research and development work. Prototype versions of the materials were developed, tested in small-scale field tests, and revised by The Learning Research and Development Center (LRDC) in cooperation with Harvard University, Graduate School of Education. These prototypes are in the hands of the publisher—now, New Century Education Corporation—for final testing and revision under LRDC's general supervision. Any indications of harmful effects or social unfairness will be taken into account in the publisher's revisions.

Claims

National standardized tests were administered to children in two cities at the end of 1 year of the program to assess the students' general abilities. Overall achievement as indicated in the standardized posttest score data showed that performance of children in the city where they were able to complete the program was generally far above average. In the second city, where many children were not able to complete the program due to a teacher strike, performance on the posttests was average for their grade level. In both cities, the highest subtest scores on the Stanford Achievement Tests were on Word Study Skills and Vocabulary

SYSTEMATIC PROGRESS IN READING AND LITERATURE (SPIRAL)

RD 030 018

An individualized program for grades 4-6 to maximize reading comprehension and application

Systematic Progress in Reading and Literature (SPIRAL) is an individualized reading program for the intermediate grades (4-6) which has as its central aim increasing reading achievement, encouraging academic interests and motivation, and developing autonomy and self-esteem. Development has been based primarily on assumptions concerning language development which have been proposed by psycholinguists such as Carroll, Goodman, F. Smith, and Wardhaugh. These assumptions support the belief that comprehension is a complex global process composed of many interrelated components. SPIRAL is unique in comparison to other programs in that it is a total reading comprehension program which integrates components so that interrelationships among language skills can be established. The individualized format permits the student to work at the appropriate level and at an individual rate. Many learning options are available to the student as self-management and decisionmaking skills are emphasized throughout the program. Literary skills are taught systematically and exposure to high-quality literature encourages a habit of reading for information and enjoyment. Continual experience with basic comprehension and study skills helps the student locate, organize, and interpret information. Life skills involving learning how to work with others and how to plan, execute, and evaluate one's work are stressed regularly. Also, the program's flexibility in usage and the nonconsumable nature of the materials allow for an economically viable program.

SPIRAL consists of three major components. First, there are literature anthologies. Literature forms the core of SPIRAL and is the basis for the interrelationship among the components. Selected readings representing many authors, all genres, various cultures, and many historical periods are contained in the SPIRAL anthologies. Content for the anthologies, selected on the basis of interest of intermediate-grade children, is presented in six themes entitled: "Animal Encounters," "Conflict Searching," "Communication," "Natural," "Supernatural," and "Making It." Literature lessons are taught mainly through teacher-directed small-group discussions called Teacher-Guided Reading Lessons or TGR's. A theme-related bibliography guides additional student independent reading.

The second component is entitled "Comprehension Skills." This component provides individualized instruction in syntactical and substantive (developmental) skills as well as study skills. Instruction is provided in self-instructional booklets and makes use of selections contained in the literature anthologies.

Application activities are the third component. Both literature and skill components are related to application activities in order to reinforce and apply learned concepts through speaking, writing, listening, and reading. Since many of the activities are designed for group use, students also learn many life skills such as cooperation, sharing, and planning. Application activities are presented in the form of attractive, laminated 8- by 10-inch cards.

The SPIRAL management system is self-regulated by the student and centers around the use of a "Pupil Planning Booklet," which serves as both a recording and planning device. The students, working at their own rate, meet specified minimum requirements within each theme before beginning a new one. The class is introduced to the SPIRAL program through teacher-directed orientation units which present a prototype of the total program to the student. During the orientation, the student learns how to use the planning booklet, experiences a teacher-guided reading lesson, learns the format of the skill modules, uses a study skill reference card in conjunction with activities, and experiments with application activities. After completion of the orientation unit, the students are given the theme planning booklet and anthology for their assigned level and begin work in the theme. Additionally, each theme includes a complete teacher's guide which includes an overview of SPIRAL, a description of components, program objectives, an overview of the theme, a list of application activities, teacher-guided reading lessons, skill introductory lessons, class record sheets, answer keys, and theme bibliography

RD 030 018

SUBJECT AREA(S)

The subject area is elementary reading and comprehension skills.

INTENDED USERS AND BENEFICIARIES

SPIRAL has been designed for students in grades 4-6. The readability of materials ranges from grades 3.5 to 9.0. The program is intended to be used successfully by slow, average, and advanced learners, as each student may progress according to individual interests and needs. The only prerequisite to the program is the successful completion of a primary reading program or a minimum standardized reading achievement test score of grade 4.0.

GOAL(S) OR PURPOSE(S)

SPIRAL's four goals are: (1) To teach basic comprehension skills in the context of concept development; (2) to nurture interest in reading for purposes of enjoyment, as well as for knowledge acquisition and utilization; (3) to teach self-management skills through decisionmaking and problem solving; and (4) to enhance self-esteem through increased self-confidence and self-understanding.

PATTERNS OF USE

Each theme includes student materials at three readability levels: 3-4, 5-6, and 7-9. Students move through the program working on comprehension skills at increasing levels of difficulty. Skill booklets may be used in any order as long as the student is placed, on the basis of diagnostic pretests, at the proper instructional level for the particular skill.

ASSESSMENT PROVISIONS

Skill pretests assess the student's ability with respect to a particular skill. Material contained in self-instructional and self-marking skill booklets are arranged in sequentially reinforced increments with pages for pretesting, instruction, practice, and related activities. Mastery is based upon the successful completion of a posttest which is teacher marked. The teacher is provided with evaluation questions for application and study skill activities.

TIME REQUIREMENTS

Approximately 45-60 minutes should be devoted to SPIRAL daily. An average child can complete the materials in one theme in about 3 months.

IMPLEMENTATION PROCEDURES

The implementation of SPIRAL requires no special equipment or classroom arrangement. The program does, however, rely heavily on the use of library books and reference materials, so these should be made readily available. Program materials are packaged in large, portable containers. Teacher preparation materials are self-instructional. Each theme includes a pupil orientation unit, accompanied by a teacher's manual as well as a complete teacher's guide.

Summary Cost Information

The cost figures are based on a class of 35 students meeting 45-60 minutes daily for 1 school year. Three classes could use the same materials during any one class period and, thereby, significantly reduce the costs. To use the materials for more than one class, the implementer need only purchase additional sets of consumable items at a rate of one set per additional class.

Using the present developer production arrangements, the total product installation cost and initial annual costs per school (based on 1 class of 35 students in each of grades 4-6) is $2,170. The average continuation cost is $315, or $3 per student.

At present, SPIRAL materials are produced using the developers' limited production facilities. All cost estimates are based upon these present arrangements. Expected commercialization of the product should substantially reduce the costs presented here.

Personnel Required for Product Adoption and Implementation

The SPIRAL program contains a self-instructional teacher training program as well as student orientation units. Training poses no additional requirement or cost. The program does not use an aide.

ASSURANCES AND CLAIMS

The present SPIRAL reading program was first formulated in fall 1973 from the lineage of IPI reading and an earlier SPIRAL version. As of March 1975, the first of four planned basic program divisions (i.e., themes) has been extensively reviewed by internal and external evaluators, tried out with individual students from the target population, and used with three classrooms of students from an inner-city sample of the target population. Since the developmental model employed with SPIRAL is based on a belief in successive approximations, the data gathered to date have been of a formative, rather than a summative, variety; that is, these data have been used both to make necessary revisions in theme I materials as well as to improve the assumptions and procedures of development of the remaining theme materials. A summary explanation of the developmental model employed is presented in the summary of supporting evidence.

Assurances

The assurances offered for SPIRAL and the claims made about SPIRAL are based on all of the aspects of the developmental sequence discussed above. Briefly, the formative data suggest that the program does not perpetuate social biases, is at least as effective as other comparable products, and can be used outside the developmental site. SPIRAL materials not only meet these minimum requirements but also extend them to the point of providing instructional options for the student who may not prefer particular materials, providing opportunities for exposure to various social groups, and providing content and instructional strategies not found in more traditional programs.

As a regular part of the developmental sequence, all materials are reviewed both by internal and external experts for "potential harmfulness" and "bias." Since the anthology selections present the most likely source of these problems, if any should exist, the selections are also reviewed by teachers using the program and some parents of the students in the program. Data from the reviewers on the selections will be used during the next scheduled revision phase as an aid in determining possible changes and deletions.

Students, representing various social groups, were exposed to individual program materials during an early phase of theme I development; later they were exposed to the entire program. In this group of more than 200 students, there has not been a known incident of physical, psychological, or sociological harm.

The three teachers employing SPIRAL in the developmental classrooms have over 20 years of combined teaching experience. On several occasions, each has commented that the SPIRAL materials, with few exceptions, are better than other reading programs that they have used. The students presently in the program will be posttested at the end of the school year in an attempt to substantiate these teacher perceptions.

To date, the materials in SPIRAL have been used only at the developmental site. The program is packaged and, therefore, transportable. Plans are now being formulated to install the program in spring 1975 at a second developmental site. In this second installation site, there will be no designer intervention.

Claims

The data collection process incorporated within the developmental evaluation sequence is responsible for the amassing of evidence for the following claims of program effects when SPIRAL is used as specified by the designers.

1. The SPIRAL program enables any student who meets specified prerequisites to work through skill instruction, literature, and related activities at a rate and to an extent consonant with ability.
2. Regardless of race, sex, religion, or socioeconomic status, SPIRAL promotes positive attitudes toward reading for information and enjoyment.
3. Developmental skill modules instruct students to reach mastery at a given criterion level on specified objectives.
4. Anthology selections create and maintain student interest, are well matched to students' reading and conceptual levels, and convey socially important thematic concepts.
5. The management system facilitates attempts by students to be more responsible for their own achievement and also frees the teacher to engage in instructional activities on an individualized basis.
6. Teacher-guided reading lessons reinforce the skill and literature objectives, are effective in obtaining the intended objective, and provide for meaningful group interactions.
7. Application activities reinforce both literature and comprehension skill objectives.
8. Evaluation materials (skill pretests and mastery tests) are valid, reliable, criterion-referenced measures with good discriminatory powers.

The logical and empirical rigor imposed by the evaluation/development model employed seems to afford a developmental sequence in which designer intentions will be realized in actual student performance.

INDIVIDUALLY PRESCRIBED INSTRUCTION IN READING (IPI READING)

RD 030 019

A reading program of sequenced reading skills organized into units and levels of work

Individually Prescribed Instruction in Reading (IPI Reading) is an individualized reading program for students in grades 1 through 6. IPI combines a hierarchical framework of behaviorally stated objectives, correlated diagnostic and evaluative instruments, curriculum materials, alternative instructional techniques, and systematic management into a comprehensive program of reading instruction. The curriculum has been developed by sequencing specific reading skills and organizing these skills into units and levels of work. Sample topics include visual discrimination, auditory discrimination, structural analysis, vocabulary development, literal comprehension, interpretive comprehension, evaluative comprehension, library skills, reference skills, and organizational skills.

There are four stages in IPI Reading. The first stage, Prereading, is divided into reading readiness and prereading. In addition to the usual prerequisites taught in reading readiness, there is an emphasis on specific phonemic/graphemic correspondences to prepare the child for work in the first book, the prereader. Decoding, the second stage, stresses the translation of printed symbols into meaningful speech sounds. The third stage, Transition, continues instruction in decoding and comprehension. The fourth stage of the program is divided into skills development and application, directed reading, and selected reading. In the last part of this stage, the student chooses, within certain limits, what to read. This stage uses specially prepared materials, as well as library and other commercially prepared resources.

Throughout the program, students direct their own learning activities and work at their own rate. They are expected to obtain their own materials and begin work with a minimum of teacher direction. Available learning materials include programed readers, tapes and tapebooks, skill sheets, storybooks, and language master cards. The use of other supplemental materials is encouraged.

Placement tests, pretests, curriculum-embedded tests, and posttests place the student at the appropriate reading level and isolate areas of particular learning difficulty. How the student studies the learning objectives and which materials are used depends upon the characteristics of the learner. Some students may prefer to work by themselves, others might prefer a peer tutor, while still others may do best in a small-group setting.

SUBJECT AREA(S)

Reading.

Visual discrimination, auditory discrimination, structural analysis, vocabulary development, literal comprehension, interpretive comprehension, evaluative comprehension, library skills, reference skills, and organizational skills are discussed.

INTENDED USERS AND BENEFICIARIES

The program has been developed for children of all abilities in the 1st through 6th grades.

GOAL(S) OR PURPOSE(S)

IPI Reading has three broad goals: Reading proficiency, student motivation, and student self-initiated learning.

PATTERNS OF USE

IPI Reading can be used in any kind of school setting: traditional classroom, open classroom, and learning center. The basic program is self-instructional, but individual tutoring, group teaching, peer help, and group discussion should be available when required. The curriculum is based on a highly developed hierarchy of decoding, comprehension, and application skills. Where the student begins in the hierarchy and the instructional pattern that is followed depends on individual needs, learning characteristics, and abilities.

ASSESSMENT PROVISIONS

Students are placed on the skills continuum by a placement test. Once the level and unit designations have been made, a pretest for a specific unit is given. The pretest determines the student's prescription or lesson plan. Progress within a skill is monitored by a curriculum-embedded test. Finally, posttests determine the student's mastery or nonmastery of a particular skill. Student progress is also monitored by oral tests, tapebook responses, and end-of-the-book tests. In addition, the teacher has the opportunity to hear the student read and respond to evaluation questions that determine comprehension of the reading materials.

RD 030 019

TIME REQUIREMENTS

IPI Reading should be used one period daily in the 1st through the 6th grades.

IMPLEMENTATION PROCEDURES

The program requires a center where materials, hardware, and cassettes can be stored and at the same time be readily accessible to students. Classes should be scheduled so as not to overcrowd the materials center at any one time. Also, if possible, developers recommend the assistance of a teacher's aide to carry out noninstructional tasks, if possible.

Summary Cost Information

The costs are based on a school having 1 class in grades 1-6 and 30 children per class, a total of 180 students. Costs are reduced for multiple classes at each grade level. Prices of materials from commercial sources are subject to change.

Personnel Required for Product Adoption and Implementation

The developers recommend, whenever possible, the assistance of a teacher's aide to carry out noninstructional tasks.

ASSURANCES AND CLAIMS

IPI Reading, including teacher and administrator training packages, can be easily installed and maintained in either open- or structured-learning settings by classroom teachers without any assistance from the developer. The program has been used by varied student populations in a wide variety of learning settings ranging from regular classes to compensatory education classes and special education groups (such as handicapped). Thus, the program has demonstrated transportability and replicability.

IPI Reading materials are free from social biases. The content of the program is neutral regarding religion, age, sex, ethnic, and socioeconomic stereotypes. Male and female and racial representations in the program meet design intentions for social fairness.

IPI Reading, an edition revised on the basis of field testing, has been in use in more than 80 schools throughout the country for at least 3 years. Thus far, the developers have received no reports of harmful effects due to using the program.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Primary reading package:				
Programed reading materials	*	1,736.49	Consumable	Webster Division, McGraw-Hill Book Co.
Sound tapebooks 3-20	30 each	351.00	Reusable	
Scholastic paperbacks	5 sets	39.00	Reusable	Scholastic Book Services, Englewood Cliffs, N.J.
Group and individual storybooks	20 sets group, 10 sets individual	385.00	Reusable	
Tapebook cassettes	2 sets	722.50	Reusable	Magnetix Corp., Winter Garden, Fla.

INDIVIDUALIZED SPELLING AND WRITING PATTERNS (ISWP)

An individualized spelling series to enable children in grades 2-6 to master the spelling of most commonly used words

Individualized Spelling and Writing Patterns (ISWP), formerly called *IPI Spelling*, is an individualized spelling series that is now published by Follett Publishing Company, Chicago, Illinois. ISWP includes most commonly used words found in the writing vocabulary of elementary grade children. The program also offers an inductive instructional approach for mastering the underlying phonic generalization for building spelling skill.

ISWP consists of five textbooks (books B, C, D, E, F). The books are divided into levels or words arranged by degree of difficulty. Levels are further subdivided into lists. Lists include word patterning activities, opportunities for the student to make inductive generalizations about spelling rules, exercises in word patterns, sentence patterns, phonetic spelling, and reading and writing. Students are not expected to do all the exercises in each list. They do only those which are necessary for mastery of the list.

Books C through F are divided into half-books of three levels each. A half-book is approximately one semester's work. Many students will finish a half-book in less than a semester. Students progress at their own rate and continue to the next half-book even though the semester is not over. Conversely, no student is pressured to complete a half-book in one semester.

There are three phases to ISWP. In the first phase, students are introduced to the series by being paced through all or part of the book that has been designated as appropriate for their grade level. They are oriented to the makeup of the book, the terminology, and the inductive approach to learning language patterns. In the second phase, students become involved in a self-pacing program in the appropriate level of books. Prescriptions, carefully tailored to the child's needs, placement tests, pretests, posttests, review tests, word hurdle tests, and final tests monitor progress and give objective evidence of the child's strengths and weaknesses. The diagnostic tests are on audio cassettes. Students enter the third phase after demonstrating mastery of all the books that are used in the elementary grades. At this point, they may continue in a formally organized program by going on to those books that have been designated as junior high level, or they may be freed from formal spelling work and be placed in a writing and reading program.

Throughout the program, students are responsible for their own learning. They gather their own materials and begin work with a minimum of teacher direction. In the upper grades, students are encouraged to score their own tests. In the lower grades, developers recommend the assistance of aides to carry out noninstructional duties.

SUBJECT AREA(S)

Spelling content area includes word patterns, spelling rules, sentence patterns, phonetic spelling, reading, and writing.

INTENDED USERS AND BENEFICIARIES

ISWP has been designed for children of all abilities in grades 2 through 6.

GOAL(S) OR PURPOSE(S)

Students completing ISWP will have mastered the spelling of the most commonly used words in the writing vocabulary of elementary grade children. In addition, they will be able to make their own inductive generalizations about spelling rules and underlying phonetic patterns and will be familiar with the four basic sentence patterns of the English language.

PATTERNS OF USE

ISWP can be used in any kind of school setting: traditional classroom, open classroom, and learning center. Students enter the program by taking a placement test which determines their appropriate starting point. Then, specific spelling skills are further narrowed down in a pretest. Students work through the self-instructional lessons at their own pace. The management problem created by having students within one classroom working on different spelling units is solved by the use of the cassette tapes.

ASSESSMENT PROVISIONS

A number of diagnostic tests are included in the program. These tests isolate spelling difficulties, monitor student progress, and indicate mastery. Placement tests are used to determine in which half-book the student should begin work. They consist of every sixth word of the half-book to which they apply. Pretests consist of the 20 words of an individual list and are taken before work on the list has started. Posttests are made up of the same 20 words but are taken after work on the list has been completed. Review tests are lists of every fourth word taken from the level just completed to determine mastery of that level. They are also used to place students in a specific level. Word hurdle tests are tests made up of all, or a sample, of the words which the student failed to master on the above tests. These tests are the only ones not on cassette tape. Final tests consist of the same list as the placement test but are taken after work on the half-book has been completed to determine mastery of the half-book.

TIME REQUIREMENTS

ISWP should be used at a minimum of 90 minutes per week. This time, however, can be adapted to the needs of individual schools.

IMPLEMENTATION PROCEDURES

The program requires a center where equipment (e.g., materials, hardware, cassettes) can be stored and at the same time can be readily accessible to students. Classes should be scheduled so as not to overcrowd the materials center at any one time. Teacher's aides are suggested to help students locate materials and to grade tests.

Summary Cost Information

The total cost to implement a program in grades 2-6, with 2 sections per grade and 30 students per section, yielding a total of 300 students and 10 teachers, would be $1,731.90 for the first year and $225 per year for continuation costs. These costs assure the availability of tape playback units. The number of units necessary would depend on scheduling patterns.

Personnel Required for Product Adoption and Implementation

In the lower grades (2-3), developers recommend the assistance of aides to carry out the noninstructional duties. A complete inservice teacher's manual provides information necessary for implementing the program.

ASSURANCES AND CLAIMS

ISWP, which includes a teacher training package, can be easily installed and maintained in either open- or structured-learning settings by classroom teachers without any assistance from the developer. The program has been used by varied student populations in a wide variety of learning settings, ranging from regular classes to compensatory education classes and special education groups (e.g., handicapped). Thus, the program has demonstrated transportability and replicability.

ISWP materials are free from social biases. The content of the program is neutral regarding religion, age, and socioeconomic status (SES) stereotypes. Male and female and racial representations in the program meet design intentions for social fairness.

ISWP, an edition revised on the basis of field testing, has been in use in more than 30 schools throughout the country. Thus far, neither developers nor the publishers have received any reports of harmful effects due to the program.

THE NEW PRIMARY GRADES READING SYSTEM

An individualized adaptive system for teaching reading skills to students in grades 1-3

The *New Primary Grades Reading System* (NRS) is an individualized, adaptive system for teaching the reading skills traditionally included in the first 3 years of reading instruction. LRDC's aim in developing NRS was to build a reading system that allows for individual variation but not for individual failure.

NRS is individualized in that it permits children to progress at different rates. It is adaptive in that alternative teaching strategies to meet the needs of different children are built into the system. NRS is organized in such a way that a teacher can monitor a classroom of children, each with different needs, who are doing different things at the same time.

NRS uses a code-breaking approach to beginning reading. A mixture of synthetic and analytic phonics is employed, along with text displays that illustrate linguistic principles. Sounding and blending are considered to be fundamental decoding skills. Symbol/sound correspondences are taught in an instructional sequence that is carefully designed to avoid confusion and to give children a repertoire of useful symbol/sound correspondences early in the instructional process. Then children are taught to use a systematic blending technique that enables them to slide the sounds together into words. However, decoding is not recognized as an end in itself. NRS is concerned with the early building of a recognition vocabulary, and encourages children to fade the overt blending behavior when no longer needed. Comprehension skills are considered vital and are tended to in conjunction with decoding. Many of the responses to formats in the students' workbooks can only be made after the children have read and understood the printed material.

NRS is composed of 14 levels, each containing approximately 10 instructional lessons. The term "level" was selected to suggest horizontal as well as vertical progress through the system. A prescriptive portion of NRS (blending booklets, workbooks, cassette tapes, and group readers) is intended to add new skills to the student's repertoire, while a choice portion of the system (read alone stories, games, and manipulatables—concrete objects for children to manipulate as an aid to concept development) is a series of activities intended to maintain skills and to build fluency at the student's current level.

NRS is characterized as a reading system because of the interrelationships among the component parts and the integration of those parts into a total management scheme. The design of NRS reflects concern about classroom management—the amount and kind of independent work provided; the response modes used at different levels; the kinds of games, stories, and manipulables developed; the structure and placing of tests; and the type of training necessary for teachers.

NRS facilitates individualization of instruction by providing a variety of materials and decisionmaking opportunities for which the students do not need direct teacher supervision. In the first two levels, instruction is conducted by the teacher with small groups of students; the teacher maintains contact with all children and monitors their learning directly. Starting with level III, lessons are presented by means of cassette tapes. Students operate the cassette players independently, do workbook pages independently, and work independently with the wide variety of choice activities that are available. The teacher circulates among the children as they work, helping them when needed and administering progress checks. Group stories are conducted by the teacher at specific intervals. Additional materials are provided for occasions when the teacher may request that a child recycle certain parts of the curriculum.

A teacher training package is an integral part of NRS. The developers of NRS have made available to individual teachers a variety of instructional strategies and alternatives, both within the training and within the NRS materials themselves, which are usually contained in some of the pages in the students' workbooks are notes to the teacher which suggest an instructionally relevant teacher-student interaction. This interaction zeroes in on the instructional content being presented in the lesson and helps the teacher diagnose student reading behavior.

The system has been used successfully with both urban and suburban children.

RD 030 021

SUBJECT AREA(S)

Primary grades reading.

There is a total of 14 levels in NRS. By the time students reach level V, there is approximately a 50-50 split in emphasis between comprehension and decoding; by level XII, the split is approximately 75-25.

INTENDED USERS AND BENEFICIARIES

NRS has been designed primarily for students in grades 1-3. However, because it is an individualized program, there are no set limitations or expectations placed on the students as to which parts of the program they complete during any school year. Some students complete the program in 2 years; others will probably not finish until the fourth year.

The experience of the designers and Fry Readability Graphs were used to select the level of difficulty of materials to be used at each level.

NRS was originally conceived for use in urban schools, especially among lower and lower-middle socioeconomic status (SES) populations. It has proved to be effective not only with these populations, but also with suburban and other primary pupils. The adaptive aspects of NRS increase its usability for different populations.

Although designed primarily for the primary grades, NRS has also been used effectively in kindergarten.

GOAL(S) OR PURPOSE(S)

The student successfully completing NRS will be able to read 3d-grade reading selections with understanding.

PATTERNS OF USE

NRS is a comprehensive self-contained system for teaching primary grades reading skills. NRS contains 14 levels, each with approximately 10 instructional lessons. The lessons are composed of specific content geared to build a base of fundamental skills that students must use as they progress from one level to the next. The levels, therefore, are sequential and cumulative.

Levels I and II are led by the teacher in small-group situations. Starting in level III, new instruction is presented to the children individually on cassettes. The NRS blending booklets, cassette tapes, workbooks, and group readers constitute the prescriptive category of NRS. Each lesson has a varying number of sequences, depending upon the difficulty of the content being taught. There is also a remedial sequence in each lesson for the child who needs additional review.

Approximately every fifth lesson is a group story, a story which a small group of children reads and discusses together with the teacher. Once the students are receiving their instruction from cassettes, the group story provides a regular opportunity for peer interaction and for a child to receive teacher instruction.

The choice category of NRS consists of games, read-alone stories, and manipulatables, such as flip-a-word spirals, which are related by their content to an NRS instructional level.

ASSESSMENT PROVISIONS

NRS has incorporated many traditional reading readiness skills into its early levels. When introduced in the 1st grade, therefore, it does not require any specific level of reading readiness.

Progress checks are used to diagnose and assess student reading behavior during the course of the NRS program. The progress checks are an example of the adaptive quality of NRS. They require that the teacher systematically interact with each child and assess needs individually. There are usually two progress checks per lesson, one of them following the regular instructional sequences. From that check, the teacher gets information on student reading behavior and decides whether the student is ready to go on to the next lesson or whether the student should do the review sequence. The second progress check usually follows the review sequence.

Student progress through the curriculum, end-of-year location in the curriculum, and performance on standardized reading achievement tests are other measures of student achievement.

TIME REQUIREMENTS

In general, the required student time is approximately 45-60 minutes per schoolday in grades 1-3. However, because the instruction is individualized, completion time will vary.

IMPLEMENTATION PROCEDURES

NRS as an adaptive system has been designed for a variety of school and classroom organizations. It can be taught in a self-contained classroom; or, to reduce the cost to a school, parts of NRS could be used in the resource center where the more expensive portions of the program are shared among a number of classrooms. If used in a self-contained classroom, NRS requires four to six cassette players with cue stops (and headsets) per classroom. Storage units that make the cassettes accessible to students are needed for each classroom.

Teacher training is necessary before a teacher initially uses NRS. The teacher training component of NRS is currently being prepared by the Learning Research and Development Center (LRDC) staff. The training sessions, as envisioned, will include approximately 4 to 5-1/2 days of instruction led by a local school representative who will have been trained as a leader by LRDC. Periodic inservice training will occur throughout the school year, further using the local trainer and video tape monitor.

Because NRS is an extensive system containing many components, management aspects of NRS have been designed for ease of classroom maintenance. All of the components are coded to make them accessible to both teacher and student. Further, the coding system enables students to return to their proper places materials they have used, thereby requiring the teacher to spend less time "cleaning up" the classroom.

The only consumable materials in NRS are the students' workbooks and a booklet which is used to record which choice activities the child uses. The other components need only minor yearly repairs. The estimated durability of the nonconsumable materials is 5 years.

Personnel Required for Product Adoption and Implementation

A primary grade teacher who has been trained by the NRS teacher training materials will be able to implement an NRS classroom. Curriculum consultation is currently available from LRDC. LRDC consultation will be phased out as local school representatives are trained to field users' questions.

ASSURANCES AND CLAIMS

Assurances

During the development of NRS, it has been used with approximately 175 kindergarten students, 350 1st-grade students, 150 2d-grade students, and 20 teachers in 2 developmental schools that are affiliated with LRDC. The schools have different racial and SES compositions. The developers of NRS have received no reports of harm associated with the use of this product.

Materials were reviewed by LRDC staff on the basis of two questionnaires developed at LRDC. One questionnaire identified equal/unequal treatment of the sexes, races, and ethnic backgrounds of the characters found in NRS. The other questionnaire was a demographic and genre classification of NRS text materials. Within the constraints necessitated by the instructional sequencing of NRS, very few indicators of social bias were found. Several instances of the use of "man" in occupational terms were isolated (e.g., fireman and mailman) at places in the instructional sequencing when it would have been impossible for the student to decode fire fighter, mail carrier, and so forth. A picture of a female fireman or mailman could be used to indicate that the occupational category includes women. In later levels when it is possible for the student to read more complex occupational titles, the developers plan to eliminate occupational titles that identify a particular sex. The generic use of "he" and the typing of the teacher as "she" were also noted occasionally and will be removed during the final revisions of NRS.

In September 1974, NRS was introduced into three 1st grades at an elementary school that is not an LRDC developmental site and had no previous relationship with LRDC or LRDC curriculums. On the basis of this implementation, it appears that the program is transportable. An evaluative study regarding this first test of transportability is underway and will be available in fall 1975.

Claims

One claim is that students in a large urban school who used NRS in the 1st grade are achieving (as measured by the Reading Subtest of the Wide Range Achievement Test) as well as 2d graders in the same school who used the regular Pittsburgh Public Schools basal reading program.

In addition, end-of-year student performance in reading (as measured by the Metropolitan Achievement Tests) indicates that in a large urban school, all five 1st-grade classrooms which used NRS showed achievement at grade level or above. By contrast, a number of classrooms using previous reading programs did not achieve at grade level.

Important instructional strategies in NRS were based on task analyses that hypothesized some of the cognitive processes involved in decoding. Throughout the development of NRS, LRDC staff worked closely with the primary grade teachers at both LRDC-affiliated developmental schools. Information obtained from the teachers was used for formative evaluation and served as a basis for NRS revisions. In addition, throughout the development of NRS, the project staff consulted and interacted with learning psychologists at LRDC.

The teachers at LRDC's two developmental schools which used NRS during the 1973-74 school year were generally pleased with its effectiveness, organization, and ease of management. Teachers were impressed by increased student reading achievement and interest in and motivation toward reading. NRS materials and instructional strategies were effective to the extent that all teachers using the program stated that they would recommend it for use by others.

In addition to the positive teacher response to NRS, another indicator of acceptability can be cited. NRS is currently being used in the three 1st grades of a school which until September 1974 had no relationship to LRDC. After observing NRS in the classrooms, the administration of this school district has made inquiries to LRDC about the possibility of installing NRS in additional classrooms in the district's other elementary schools.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Cassette players	4-6 per classroom*	60.00-100.00	Reusable	—
Cassette storage unit	1 per classroom	**	Reusable	
Student workbooks (38 different workbooks)***	1 per student	**	Consumable over course of program	
Instructional cassettes (354 different tapes)***	2-3 per classroom	**	Reusable	

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Group Readers (7 different books)***	7 per classroom	**	Reusable	
Student blending booklets (9 different booklets)***	5 per classroom	**	Reusable	
Games (118 different games)***	1 per classroom	**	Reusable	
Read-alone stories (97 different stories)***	1 per classroom	**	Reusable	
Manipulatables (10 different sets of flip-a-words)***	1 per classroom	**	Reusable	
Booklet to record choice activities used***	1 per student	**	Consumable over course of program	
Teacher's manuals and other instructional guides (22)***	1 per classroom	**	Reusable	
Classroom set for teaching Levels I and II (includes teacher blending booklets, letter cards, flip-a-words, progress checks, alternative teaching strategies)***	1 per classroom	**	Reusable	
Teacher training package (presently under development; includes printed guides, trainee response pages, video tapes)				

---

* These estimates are based on the assumption that NRS is operating in a self-contained classroom.

** These materials are prototypes that have been developed at LRDC. Materials are expensive because they have been developed in small quantities, not using economies of scale or production expertise available to a publishing house. An accurate cost per item cannot be determined at this time.

*** The developers suggest that a 1st-grade classroom be stocked with Levels I-VIII, a 2d-grade classroom with Levels III-XII, and a 3d-grade classroom with Levels VI-XIV. Therefore, the whole program is not found in any one classroom.

DEVELOPER/AUTHOR:

Learning Research and Development Center
University of Pittsburgh
3939 O'Hara St.
Pittsburgh, Pa. 15260

Isabel L. Beck, Project Director

AVAILABILITY

An initial version of the *New Primary Grades Reading System* (NRS) will be completed in fall 1975. Revisions and further study of NRS are planned, in addition to continuing development of teacher training materials. A publisher is being sought for the program.

NRS is currently being tested in the 1st and 2d grades in two LRDC-affiliated developmental schools and in the 1st grades of an unaffiliated elementary school. In fall 1975, the program will also be used in the 3d grades of the developmental schools and in the 2d grades of the unaffiliated school. A developmental copyright is pending. Sample prototype materials are available from:

Learning Research and Development Center
University of Pittsburgh
3939 O'Hara St.
Pittsburgh, Pa. 15260

INFORMATION CURRENT AS OF MARCH 1975 ■

THE SPELLING PROGRAM

An individualized program designed to allow students to practice and acquire spelling words at their own rate

The *Spelling Program* is an individualized program designed to allow students to practice and acquire spelling words at their own rates. The program includes directions for: (1) Initial placement; (2) secondary placement; (3) appropriate selection of spelling words; (4) determination of "optimal learning capacities"; (5) criteria for adding new words; (6) review procedures; (7) daily data collection; (8) maintenance; and (9) samples of data sheets, worksheets, test sheets, and data displays.

The program is designed: (1) To allow students to work with the maximum number of words that they are able to handle; (2) to allow pupils through appropriate placement procedures to work only with words that they do not know, thus reducing the amount of time children often spend studying material they already know; and (3) allow pupils to see success immediately—first by elimination of a word from the study/test list as soon as the pupils demonstrate the ability to spell that word, and second by involving the pupils in viewing and/or charting the cumulative number of known words.

Although a certain sequence of spelling words is suggested in the program, the format could be used with any standard spelling curriculum. Finally, the program can be made nearly teacher-independent through the use of a language master or peer tutors.

SUBJECT AREA(S)

The procedures described in the *Spelling Program* could be adapted to any grade level spelling material.

INTENDED USERS AND BENEFICIARIES

This program is prepared for any student who has the long-range goal of being able to communicate accurately in a written fashion. It is also suited to a learner who is 15 years old (plus) and beginning "spelling" for the first time or a learner whose final placement will be a sheltered workshop. For these learners, the program format would be used with basic survival words (e.g., name, address, and parents' name) as the curricular matter rather than the more traditional spelling curriculum.

GOAL(S) OR PURPOSE(S)

The goal of the *Spelling Program* is to efficiently and effectively teach children to spell. In addition, the program is intended to insure maintenance of spelling skills once they are acquired.

PATTERNS OF USE

The *Spelling Program* is easily adapted to any sequence of words the teacher chooses. The program is individualized and when used with a language master or peer tutor can be largely self-managed by pupils.

ASSESSMENT PROVISIONS

Detailed instructions are given for adequate initial and secondary placement of students so that they are working on material which is new to them. In addition, daily data collection procedures are detailed which allow both pupil and teacher to monitor progress.

TIME REQUIREMENTS

If the program is managed by the pupils, as recommended, the only teacher time involved would be checking the practice and test sheets. This program would be used as part of the standard spelling curriculum.

IMPLEMENTATION PROCEDURES

All the procedures for implementation of this program are included in the program package.

ASSURANCES AND CLAIMS

The *Spelling Program* has been used successfully in three public school classrooms in the Seattle area, as well as with numerous students at the Experimental Education Unit (EEU). There has been no evidence of harmful effects of any kind. On the contrary, pupils who previously had maintenance scores of 40 percent under traditional spelling programs are now scoring 90 percent on maintenance tests.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Program manual	1 per teacher	Not determined	Reusable	
Language master (recommended only)	1 per room	Not determined	Reusable	

Note: Since any individualized program can be expensive in teacher time, this program was designed to be used with a language master or peer tutors or aides.

INDIVIDUALIZED LEARNING FOR ADULTS– COMMUNICATIONS SKILLS

A program which concentrates on the systematic development of reading ability

Individualized Learning for Adults– Communication Skills concentrates on the systematic development of reading ability. It is designed for young-adult and adult learners whose reading abilities may range from total illiteracy to approximately 9th-grade level.

The program was developed in response to three major problems identified by the Nevada Department of Education in 1969 as hindering the implementation of the Adult Basic Education (ABE) program. They are: (1) The large number of ABE dropouts, (2) the lack of appropriate instructional materials, and (3) the high mobility of the undereducated adult. Individualized instruction was perceived to be a reasonable solution to all three problems. Therefore, Individually Prescribed Instruction (IPI), a program developed for and extensively disseminated to elementary school learners, was used as a model in developing the *Individualized Learning for Adults* (ILA) program.

The ILA reading continuum consists of 129 performance objectives. These are organized into nine areas: Phonic analysis, structural analysis, vocabulary development, literal comprehension, interpretive comprehension, evaluative comprehension, library skills, organizational skills, and reference skills.

Five entrance tests sample the learner's performance in each area of the continuum and indicate the appropriate starting level for each student. Seventy pretests and posttests plot the learner's route through the instructional materials and determine what the student does or does not know about the content. The instructional component is comprised of 129 skill booklets, 1 for each of the program's performance objectives. Included in each booklet are two skill tests to monitor student progress and help make instructional decisions. A series of 44 cassette tapes also functions as part of the instructional materials.

Once students have been appropriately placed, they move through the program at an individual pace and study only that not already learned. The ILA teacher serves primarily as a manager who oversees the functioning of the program, tutors individuals or small groups, and acts as a resource to the learner. To enable the teacher to devote more time to individual learning problems, developers recommend the use of a nonprofessional aide for clerical tasks.

SUBJECT AREA(S)

Adult basic education—reading.

Subject areas include: Phonic analysis, handwriting, structural analysis, vocabulary development, literal comprehension, evaluative comprehension, library skills, organizational skills, and reference skills.

INTENDED USERS AND BENEFICIARIES

The program has been specially designed for adult and young-adult preliterate and semiliterate learners.

GOAL(S) OR PURPOSE(S)

ILA seeks to improve the reading skills of preliterate and semiliterate adults through an individualized instructional system which emphasizes purposeful, self-directed learning; and to provide the learner completing the entire continuum with approximately a 9th-grade reading-ability level.

PATTERNS OF USE

The program can be used in essentially any Adult Basic Education (ABE) setting. Field testing has validated its use in ABE classes, secondary schools, correctional institutions, and the Armed Forces. ILA is largely self-managed and self-instructional. Developers encourage the use of supplementary materials when appropriate but point out that the program is not amenable to substantive change.

ASSESSMENT PROVISIONS

The student's entry level into the program is determined by a series of five placement tests. Pretests, taken before work in a specific area is begun, measure the student's skill within each area; posttests measure mastery of specific objectives. There are 70 pretests and 70 posttests. Evaluative instruments are also embedded in each instructional booklet.

TIME REQUIREMENTS

The length of time required to complete the continuum will vary depending on the achievement and motivational level of the entering student.

IMPLEMENTATION PROCEDURES

The consumer who is comfortable with the use of performance objectives as guides to instruction and who is philosophically attuned to the values of individualization should have no serious problem with implementing the program. If used with secondary students, parent awareness of the system and its objectives will facilitate instruction. The program is packaged for use as an instructional unit and requires minimum external assistance for successful implementation.

Summary Cost Information

The costs calculated in the table under "Materials and Equipment" are for 50 students. Consumable instructional material can be replaced at $0.02 per sheet. Average total installation cost per student is $69.68; the cost of consumable materials averages $26.46 per student.

Personnel Required for Product Adoption and Implementation

The program was intended for use with 1 teacher for every 20 students in instructional settings. Clerical support needs have been estimated at 1 clerk per approximately 100 students. Translating this into personnel, FTE requires a determination of how much time each student will spend in the program.

ASSURANCES AND CLAIMS

This product has been evaulated during use with over 400 secondary school students, 49 military recruits and approximately 300 prison inmates. In each case, the product functioned as a central element in a basic skills program. The assessment of results was conducted by an internal evaluation staff. Evaluation of the product in a secondary school setting was supervised by the National Institute of Education. This evaluation provided the most extensive source of data on the product. Evaluative evidence was gathered in a rigorous fashion using well-developed designs and instrumentation, and may be accorded high credibility.

Assurances

During the product's use in secondary school contexts, student achievement and attitudes in numerous areas were documented. Practitioners were also frequently consulted concerning the effects of the product on students. In no case were negative effects demonstrated. Thus, there has been no indication that the product induces or facilitates any type of harm.

To assure social fairness, product developers have critiqued their own work; National Institute of Education staff and consultants have reviewed the product; and mechanisms have been employed to obtain user feedback. These sources have not revealed any social bias or stereotyping inherent in the product.

Successful use of the product in a variety of settings has demonstrated its replicability and transportability. Instructional materials are available as a package. To date, technical assistance has been provided to users in implementing the product. Some assistance from the developer is seen as desirable.

Claims

The major outcome claim made for the product is that it facilitates basic skills attainment. This claim has been supported by the evaluation of results from secondary students, military recruits, and prison inmates. In all cases, academic growth has been substantial and statistically significant during the course of product use. Comparative studies with other programs have been limited to date, but suggest that the product is at least as successful as other approaches.

The major process claim made for the product is that it allows students to progress at their own rates through materials which are perceived as beneficial and interesting. This claim was tested using student questionnaires and interviews. Students rated the product as above average on items relevant to this claim.

BLENDING SOUNDS PARENT TEACHING PACKAGE

A portable package designed to teach the sounds of letters to elementary school children 5-12

Blending Sounds Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to teach children in the elementary grades to "sound out" words. The children will learn to blend sounds into words rapidly without pausing between sounds. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because many children have difficulty learning to read. One of the most difficult, yet essential, skills for those students to learn is how to sound out words and how to blend sounds rapidly enough to make a word.

In this package the student is required to respond to the visual image of the letter(s) by saying the sound of that/those letter(s) as quickly as the student can. As the lessons progress, the student is expected to increase in speed and respond automatically to the letter symbol(s). The speed set for criterion performance is critical. This factor determines the child's ability to blend.

The parent begins by reading the first section of the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills.

The parent studies a sound chart and learns to correctly monitor and imitate the correct sounds for the letters. When the parent knows these sounds, the pretest can be administered to the child to determine which sounds the child knows and which sounds the child does not know. The parent then begins daily lessons using the stack of sounds that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the student saying the sounds of the letter symbols that are known as quickly as possible. A procedure is specified to do so. Each time a row of cards is said, the child is timed. The lesson terminates in approximately 20 minutes, and at that time the parent and student record the best time in reading all of the known sounds on the student progress record sheet (student graph).

SUBJECT AREA(S)

The subject area is reading; specifically, vowel diphthongs, irregular vowels, consonants, consonant digraphs, and short and long vowel sounds; and how to blend these sounds into words.

INTENDED USERS AND BENEFICIARIES

This package is for any student in the elementary grades who does not know how to sound out words or blend sounds into words.

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to say 71 letter sounds automatically when presented the visual letter symbol and will be able to blend these sounds into words at a rapid rate.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to read and blend the sounds of the visual word units presented on a sheet of paper. The student who does not obtain acceptable error and time criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the student progress sheet (graph), which requires the parent to indicate how many sounds were read correctly from the known sounds stack and how much time it took the child to read those sounds. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the student progress record sheet is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Blending Sounds Parent Teaching Package* as itemized above is $2.20 (price subject to change). The package is completely reusable except for the graphs (which can be reproduced), the letter to the parent, and the evaluation form (which can also be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages.* At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Parent's manual	1	1.00	Reusable	
Set of 67 sound symbol cards	1	1.00	Reusable	
Student graph	1	.05	Consumable each time program is implemented	
Letter to parent	1	.05	Same as above	
Evaluation form	1	.10	Same as above	

Note: All manuals and progress forms are good black-and-white copies; they can be reproduced by the teachers.

SOUND SYMBOL PARENT TEACHING PACKAGE

A portable package designed to teach children in the elementary grades to "sound out" words

Sound Symbol Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to teach the sounds of the letters to children in the elementary grades who do not know the sounds of the letters. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because many children have difficulty learning to read. Sound-symbol relationship is a necessary and critical prerequisite skill to learning to read.

In this package the student is required to respond to the visual image of the letter by saying the sound of that letter as quickly as the student can. As the lessons progress, the student is expected to increase in speed and respond automatically to the letter symbols.

The parent begins by reading the first section of the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills.

The parent studies a sound chart while listening to the sound tape or record and learns to correctly monitor and imitate the correct sounds for the letters. When the parent knows these sounds, the pretest can be administered to the child to determine which sounds the child knows and which sounds the child does not know. The parent then begins daily lessons using the stack of sounds that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the student saying the sounds of the letter symbols that are known as quickly as possible. A procedure is specified to do so. Each time a row of cards is said, the child is timed. The lesson terminates in approximately 20 minutes, and at that time the parent and student record the best time in reading all of the known sounds on the student progress sheet (student and parent graph).

SUBJECT AREA(S)

The subject area is reading; specifically, consonants, consonant digraphs, and long and short vowels.

INTENDED USERS AND BENEFICIARIES

This package is for any student in the elementary grades who does not know the sounds of the letters.

RD 030 025

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to say 39 letter sounds automatically when presented the visual letter symbol.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult. However, there are some teachers that are using this package with 1st graders as an introductory program to reading.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to read the sounds of the visual symbols presented on a sheet of paper. The student who does not obtain acceptable error and time criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the student progress sheet (graph), which requires the parent to indicate how many sounds were read correctly from the known sounds stack and how much time it took the child to read those sounds. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the student progress record sheet is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Sound Symbol Parent Teaching Package* as itemized above is $3.25 (price subject to change). The package is completely reusable except for the graphs (which can be reproduced), the letter to the parent, and the evaluation form (which can also be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages.* At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

VOCABULARY BUILDING PARENT TEACHING PACKAGE

A portable package to increase the reading ability of students in grades 8-12

Vocabulary Building Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to develop oral reading fluency, word recognition, and word meaning skills of students in grades 5 through 12 who can read at the 4th-grade level or higher. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The package was developed to meet the needs of children who had acquired decoding skills in reading but were lacking in reading speed, vocabulary, and word meaning skills. This package is designed to provide practice in acquiring these skills.

In this package, the student is expected to increase the speed in reading a passage in a book, newspaper, or magazine and to demonstrate knowledge of increased vocabulary and word meaning skills.

The parent begins by reading the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills.

The parent administers the pretest to determine whether the child is able to read at the level required for work on the vocabulary building package. The child reads three 100-word paragraphs and must meet the acceptable time and error criteria to qualify for this package. If the student is reading at the 4th-grade level or higher, the parent begins daily lessons with the student.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the following steps:

1. Parent-child review of words learned on previous days.
2. Child's reading aloud of 100-word selection (self-chosen from book, newspaper, or magazine); underlining of words now known; joint printing of each unknown word on one of the blank cards.
3. Parent's taking one of the written unknown words and teaching the child how to say it.
4. Parent's teaching the child meaning and pronunciation of word if it is unknown.
5. Child's demonstration of word meaning by properly using word in a sentence.

Steps 3-5 are repeated with each word until all 100 words have been taught.

6. Child's oral reading of 100-word selection while parent times the reading and records number of words missed.

The lesson terminates by filling in the progress record form.

SUBJECT AREA(S)

The subject area is reading; specifically, word recognition, word meaning, and oral reading skills.

INTENDED USERS AND BENEFICIARIES

This package is for students in grades 5 through 12 who need improvement in word recognition and word meaning skills and oral reading fluency.

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The student will increase in rate, oral reading ability, and word meaning and word recognition skills.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

ASSESSMENT PROVISIONS

Students are administered a criteiron-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to read three 100-word passages. The student must be reading at the 4th-grade level or higher to qualify for the package.

At the completion of each daily lesson, the progress of the student is indicated on the progress record form, which requires the parent to record the initial amount of time it took the student to read the paragraph chosen in the daily lesson and the words underlined. The parent also records the results of Step 6 by indicating the total number of correct and incorrect words. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the progress record form is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Vocabulary Building Parent Teaching Package* as itemized above is $1 (price subject to change). The package is completely resuable except for the progress record form (which can be reproduced), the letter to the parent, the evaluation form (which can also be reproduced), and the blank cards.

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages.* At that time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

WORD RECOGNITION PARENT TEACHING PACKAGE

A portable package designed to increase the elementary school child's speed in recognizing words that are not possible to sound out

Word Recognition Parent Teaching Package is a portable, self-contained unit of pencil-and-paper format. The purpose of this package is to increase the child's speed of sight words that are not possible to sound out. It is designed to teach one child at a time. It is not intended for group instruction. One lesson is to be taught each day, and the package itself takes approximately 30 or more days to complete.

One of the major problems of teaching rural area children with learning difficulties is the lack of specialized facilities and services. A source of manpower is the child's parents. Providing local teachers and parents with a training program *(Parent Teaching Package)* would allow them to function independently of a centralized facility that would be more in keeping with the fiscal and manpower limits of a greater number of rural school districts. A training model utilizing parents, family members, or close friends, if effective in making the necessary behavior changes, would meet some of the needs of the child, the family, and the school.

The need for this product has arisen because many children have difficulty learning to read. The acquisition of a sight vocabulary is essential if the student is going to learn to read fluently.

In this package the student is required to respond to the visual image of the word by reading the word aloud as quickly as it is possible to respond. As the lessons progress, the student is expected to increase in speed and respond automatically to the sight words.

The parent begins by reading the first section of the parent's manual. The manual trains the parent in the direct teaching of the selected skill, in the supervision of the practice of the skill, in the procedure to monitor the child's progress throughout the package, and in child management skills.

The pretest is administered to the child by the parent to determine which sight words the child knows and which words the child does not know. The parent then begins daily lessons using the stack of words that the child knows.

The daily lesson procedure specifies exactly what the parent is to say and do and specifies what the child is to say and do. Correction procedures are built into each part of the daily lesson. Appropriate troubleshooting phrases are also built into the lesson for the child that does not succeed on the first attempt. For those students who do succeed, task command is followed by specific praise.

The package, which has been programed to stand alone, is a self-contained unit and is being field tested under these conditions. Thus there is no formal training of the parents before they use the product with their own child in the home. The manual is the total training component for both parent and child.

The core of a daily lesson consists of the child saying the known sight words as quickly as possible. A procedure is specified to do so. Each time a row of cards is said, the child is timed. The lesson terminates in approximately 20 minutes, and at that time the parent and student record the best time in reading all of the known sounds on the student progress record sheet (student graph).

SUBJECT AREA(S)

The subject area is reading; specifically, how to respond automatically to phonetically irregular sight words that occur most frequently in reading in the elementary grades.

INTENDED USERS AND BENEFICIARIES

This package is for any student in the elementary grades who has not acquired a basic sight vocabulary.

This package is designed to be used by parents in the home on an individual basis with their child. However, there are many teachers, paraprofessionals, and untrained aides who are using this package in the classroom, both regular and special, and in the resource room.

GOAL(S) OR PURPOSE(S)

The child successfully completing this package will be able to say 100 sight words automatically when presented the visual word unit.

PATTERNS OF USE

The daily lesson format has a direct instructional approach which is to be followed specifically as written in the parent's manual. Everything the parent is to say or do is written precisely and is preceded by a capital "P." Everything the child is to say or do is preceded by a capital "C." The parent is to follow the order of the daily lesson format as indicated. The daily lesson format has been programed to insure that the child obtains maximum success in obtaining the skill. Each step is sequential and should be followed precisely as written.

This package is intended to be used after the teacher has presented the skill in the classroom. The child can benefit from the use of this self-contained package if mastery is difficult.

ASSESSMENT PROVISIONS

Students are administered a criterion-referenced test by the teacher to readily identify which students can benefit from the package. The student is asked to read the words that are presented on a sheet of paper. The student who does not obtain acceptable error and time criteria is placed in the package.

At the completion of each daily lesson, the progress of the student is indicated on the student progress sheet (graph), which requires the parent to indicate how many words were read correctly from the known words stack and how much time it took the child to read those words. This presents both the parent and the student, as well as the teacher, with a record of the child's progress. At the end of the package, the student progress record sheet is sent to the child's teacher.

TIME REQUIREMENTS

This package is intended to be used approximately 20 minutes daily for 4 weeks.

IMPLEMENTATION PROCEDURES

This is a self-contained program which does not rely on special services or facilities for implementation. The teacher who utilizes the product with students and parents in the home should be familiar with the package in order to answer questions the parents might have.

All manuals and progress forms are good black-and-white copies so they may be reproduced by the teachers.

Summary Cost Information

The total cost of the *Word Recognition Parent Teaching Package* as itemized above is $2.50 (price subject to change). The package is completely reusable except for the graphs (which can be reproduced), the letter to the parent, and the evaluation form (which also can be reproduced).

Personnel Required for Product Adoption and Implementation

The package is used in the home with the parent as the implementer of the program. No special training is required of the parent. The only requirement is that the parent read the parent's manual to learn how to implement the program.

ASSURANCES AND CLAIMS

The third year of this project consists of the summative evaluation of all *Parent Teaching Packages.* At this time we will be provided with data through a major field test that will provide us with the information to make such assurances and/or claims. We are in the second year of this project and have just completed the formative evaluation.

SWRL PROFICIENCY VERIFICATION SYSTEM: READING

A system developed to operate in connection with 10 widely used reading text series

The *SWRL Proficiency Verification System* can be most expeditiously described in terms of the situation in which it will operate. The situation is typical in the schools of the Nation at the present time. An educational agency—a school district most likely, but possibly a State, or a subunit within a district—has adopted two or more text series from which education units may "subadopt" as a basis for instruction. The agency wishes to credit the instructional accomplishments attained by students and teachers with these series and to convey such information in forms that are understandable and useful to school personnel, and also to parents through the teacher and to the community through district officials. The agency also wishes to obtain information for instructional planning purposes regarding the differences in accomplishments with the different series being used within the agency. However, it is immediately within reach of, if not within, the state of the art of educational research and development to satisfy.

The *SWRL Proficiency Verification System: Reading* is initially being developed to operate in connection with all, or a subset of, 10 widely used reading text series. PVS operates as follows: Each participating agency indicates the number of students and school location, and instructional placement of students for each series in use. PVS resources provide text-referenced assessment measures for administration by teachers approximately four times a year, depending on instructional pacing. PVS generates reports for teachers, principals, and district officials crediting instructional accomplishments and summarizing instructional planning data.

PVS resources include operating guides, text-referenced proficiency verification booklets for students, and interpretation guides.

SUBJECT AREA(S)

The subject area is reading, with special emphasis on decoding and comprehension.

INTENDED USERS AND BENEFICIARIES

PVS is being developed for use with all students involved in instruction with the set of instructional products defined by the text series. It is being field tested with a range of different educational situations. PVS provides an operational mechanism for involving parents and community advisory groups as users and beneficiaries of instructional planning information with the professional guidance of educational personnel.

GOAL(S) OR PURPOSE(S)

Agencies participating in PVS receive organized and interpretable information regarding instructional accomplishments. The information is referenced to the specific instructional products that have been procured to provide resources for school personnel to equip students with reading proficiency.

PATTERNS OF USE

PVS assessment measures are referenced to text resources. Thus, PVS is adaptive to the instructional pace at the student, teacher, school, and district levels. An important feature of PVS is that the reports yield systematic information on proficiency rate as well as proficiency substance.

ASSESSMENT PROVISIONS

Assessment is the nuclear core of PVS. The assessment, however, does not reference either abstract "criteria" or "people as products." Rather, it references the instructional products that school personnel use as resources to attain reading proficiency criteria with individual students.

TIME REQUIREMENTS

PVS augments regular classroom instruction. Typically, during the course of 1 academic year, it requires about 2 hours of student time. Special teacher time for PVS operations is negligible. The greatest segment of professional time is devoted to the use of the PVS reports in instructional planning. This time allocation is at the professional discretion of the report recipients.

IMPLEMENTATION PROCEDURES

A comprehensive, self-contained training system is provided. The training system enables district supervisors to assume all responsibility for training teachers and other school personnel in the use of PVS and to conduct this training within the time conventionally available to school personnel.

Installation system materials facilitate the performance of administrative functions related to PVS, for example, suggestions for conducting briefing sessions for school boards, parents, and community members; monitoring the operation of PVS during the school year; reporting pupil proficiency to parents and others interested in the schools; and conducting between-program comparisons.

ASSURANCES AND CLAIMS

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During development, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema and has served to assure user acceptability and product transportability.

The product does not appear to possess bias or imbalance in such areas as sexual stereotyping, cultural and racial diversity, dangerous substances, and religion.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Starter set, including coordinator guide and participation rosters for schools and intraschool units	1 set per participating agency		Yearly	
Training/installation set, including information booklets, operations guides, filmstrips, and audiotapes	Dependent upon number of participating education units in the agency		Reusable	
Classroom set, including PVS booklets and operations record forms	1 set per 30 students per instructional series		Yearly	
PVS reports, generated following computer analysis of data, accompanied with report interpretation guides	Generated for class, school, and district levels at beginning of year, mid-year and end of year.		Archival

RD 030 029

SYSTEM FOR OBJECTIVE-BASED ASSESSMENT OF READING (SOBAR)

A program to assess the reading level of students in grades K-12

The *System for Objective-Based Assessment of Reading* (SOBAR) is part of a mastery testing program in reading and mathematics. SOBAR helps to identify students' specific reading skill weaknesses and strengths through customized objectives-based tests. To implement SOBAR, a school, district, or State selects the reading objectives most important for the students at a particular level. The importance of the objective is determined by unique aspects of the particular reading program and students.

SOBAR tests are used for pretesting, for posttesting, and as an interim measure at various points during an instructional program. For each testing period, 10 to 40 objectives are selected from a comprehensive collection of all reading objectives. A test is then constructed, "tailor-made" to the specified objectives. The publisher provides three test items for each objective, prepares test booklets, and sends the customized tests and examiner's instructions to the schools. Scoring provides three types of information: Individual student reports, group results, and a distribution of which objectives the students have mastered and which they have not mastered.

SUBJECT AREA(S)

The subject areas are evaluation, language arts (reading), and goal definition. The reading objectives are organized in four major categories: Word attack, vocabulary, comprehension, and study skills.

INTENDED USERS AND BENEFICIARIES

Administrative personnel and teachers at the school, district, State, regional, and Federal levels responsible for decisions concerning resource allocation, classroom management, curriculum planning, and instructional program evaluation in the area of reading are the intended users.

Students of all reading abilities in grades K-12 are the ultimate users and beneficiaries of *System for Objective-Based Assessment of Reading* (SOBAR).

GOAL(S) OR PURPOSE(S)

The purpose of the *System for Objective-Based Assessment of Reading* is to provide assessment instruments relevant to local (or other aggregate) reading programs in order to generate information needed to make decisions concerning resource allocation, classroom management, curriculum planning, and program evaluation and improvement.

PATTERNS OF USE

SOBAR is used for pretesting, posttesting, and interim testing; this could be for programs of varying lengths, hanging from a 1-month teaching unit to a 1-year program. Items not in the system can be added to SOBAR tests, expanding the potential patterns of use to fit user needs.

ASSESSMENT PROVISIONS

SOBAR is an assessment system.

TIME REQUIREMENTS

Time requirements vary depending on the selected pattern of use; students spend from 20 minutes to a maximum of 15 hours per year using SOBAR tests. Administration (proctor or teacher) time is approximately the same as student time. Administrator (decisionmaking) time will vary with each user.

IMPLEMENTATION PROCEDURES

As an optional special service, scoring can be provided by the publisher.

ASSURANCES AND CLAIMS

As in any testing situation, extreme pressure to perform well can cause mental anguish in some students. The user is advised as a normal part of the selection procedure, however, to select objectives at an appropriate level. The flexibility inherent in SOBAR makes it possible to avoid items of extreme difficulty, something that cannot be controlled in traditional achievement tests. This same flexibility—user control of test content—provides assurance of the effectiveness of SOBAR in regard to the appropriateness of test content. Technical accuracy is assured by a thorough development and review process.

Reading passages in SOBAR were developed with the intent of avoiding stereotyped roles of people (e.g., on the basis of age, sex, race, or religion). Reading passages and test items have been reviewed and field tested. To the best of the developer's knowledge, there is no social bias in any of the content.

Administration of SOBAR tests is completely explained in a user's guide as well as in the administrator's copy of each test. No difficulties in test administration have been encountered in the field. Printing, delivery, and scoring of tests are all handled by Science Research Associates, Inc., a well-known and respected educational publisher. No problems of transportability are envisioned with SOBAR.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student test booklet:				
a. custom tests	1 per student	Average .60 per student (minimum order 300.00)	Grades K-2: Replace with each use; grades 3-12: Can be reusable when testing same objectives—then replace approx. every 4th use	
b. catalog tests (predetermined content)	1 per student	Average .45 per student (minimum order 12.50)	Replace approx. every 4th use	
Answer sheets	1 per student	Approx. .01 per student*	Consumable	
Catalog of objectives	1 per 25 students	3.25**	Reusable	
Guide to mastery testing	1 per 25 students	.64**	Replace approx. every 4th use	
Examiner's manual	1 per 25 students	.64**	Grades K-2: Replace each testing; grades 3-12: Replace approx. every 4th use	
Supplemental items:				
Machine scoring and reporting	1 per student	Varies with number of students tested; average .75 per student***		

*No charge if user has SRA score the tests.
**Price, if bought separately. Include in test booklet price if customized booklets are ordered.
***Varies with number of students and/or objectives tested.

COORDINATED HELPS IN LANGUAGE DEVELOPMENT (CHILD)

A teacher's guide to expand the verbal power of kindergarten children

Coordinated Helps in Language Development (CHILD) is a teacher's guide containing 78 activities for increasing abilities of kindergarten children to express themselves by expanding verbal power and linking language and thought. The guide provides the objective for each activity, suggested materials to be used, procedures to be used, and observable expected behaviors which indicate growth on the part of children. A recordkeeping system for the teacher's use is included.

A long-neglected area in oral language is the teaching of guided activities which relate language and thinking. Oral language is a learned skill. As language may be used to express thought and feeling, the reciprocal relationship may also be true. Not only does thinking affect language, but language may affect thinking. Children need to talk about things that require very careful, precise thought so that their language has to accommodate relatively complex ideas.

The language experience approach is used to encourage the child to express thoughts orally by using language and then receiving reinforcement and broader practice through encouragement from the teacher.

The teacher provides stimulation, motivation, and guidance to the children by creating or utilizing learning situations. The teacher, through the questioning strategy, helps children listen attentively, increase vocabulary, extend meanings and language patterns, and express feelings.

The children imitate sounds, use new words, participate in conversations, make comparisons, use synonyms, expand language patterns through use of longer and more complex sentences, and express their feelings.

Sample Lesson

Objective—The child completes riddles which describe six farm animals.

Minimum list—Horse, cow, pig, chicken, duck, and sheep.

The child asks a riddle which gives three clues describing one of the six farm animals listed.

Materials (record kit)—*Sounds I Can Hear*, "Farm in the Zoo."

Procedures—Progress through each procedure in the following order. Pictures may be shown to children having difficulty:

First, ask children to complete riddles. Some examples are:

I swim in the water using my webbed feet. I have feathers on my body. I am a ________________.

I have four legs and a heavy body. My nose is called a snout. The meat I provide is called pork. I am a ____________________.

SUBJECT AREA(S)

The subject area is language arts oral expression.

INTENDED USERS AND BENEFICIARIES

Kindergarten teachers will use the product as a guide. It provides tested learning activities for language development for early childhood, ages 4 to 7. The primary target is kindergarten children.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to improve language ability by: (1) Hearing and imitating sounds of language, (2) increasing vocabulary, (3) extending meaning, (4) extending language patterns, (5) expressing feelings, (6) classifying things, (7) conveying imagination, (8) solving problems, and (9) expressing abstract reasoning.

PATTERNS OF USE

The 78 activities are arranged in categories according to the 9 instructional goals stated above. Although the activities can be used outside of sequence, evaluation and practice are enhanced through sequential use.

ASSESSMENT PROVISIONS

A sample lesson checklist is included. Teachers should use the checklist to record "(x)" for the children who can do the activity and "(o)" for those who cannot do the activity and need additional instruction. Thus, teachers always have an assessment of which children need practice in each activity.

TIME REQUIREMENTS

It is recommended that teachers use language development activities daily, giving all children approximately 20 minutes of concentrated practice, supplemented by incidental practice throughout the day.

IMPLEMENTATION PROCEDURES

The guide is essentially self-contained. Teachers can use it independent of any particular set of materials. However, a bibliography and suggested types of materials are included—such as books, display board, films, science materials, mathematics materials, pictures, commercial materials, and recordings.

ASSURANCES AND CLAIMS

Assurances

The material was examined in-house for social fairness and for psychological harmlessness. In each case, the judgment of the inhouse reviewers was supportive of the materials.

Claims

The results of a comparative test of 100 randomly selected children from 10 treatment classrooms and 90 randomly selected children from 9 nontreatment classrooms, and replicated a year later with a smaller sample, verified significantly superior performance of the treatment group on a 22-item criterion-referenced test.

DIAGNOSTIC AND PRESCRIPTIVE READING INSTRUCTION PROGRAM (DPRI)

A multimedia program to enable teachers to diagnose and correct children's specific reading problems

This is a series of seventeen 1/2-hour color video taped instructional units, with accompanying ancillary and testing materials, designed as inservice training for teachers of reading in grades K-6. The program offers teachers individual experience in diagnosing children's specific reading problems, locating procedures for teaching the needed skills, and suggesting appropriate strategies. Video tapes feature classroom teachers and students illustrating new and innovative teaching techniques in a classroom-oriented atmosphere. Teachers are provided with diagnostic procedures, procedures for connecting diagnosis with prescriptive instruction, and prescriptive instructional techniques.

Five video taped seminars, each with a distinguished panel of authorities in the content area, have also been developed. Seminar discussion centers around problems and questions related to connecting diagnosis with prescriptive instruction.

Included with the video tapes is a packet of ancillary/laboratory materials, including both group and individual activities for participants to complete. Also included are materials for testing participant progress in the content areas covered in the video tapes and ancillary materials; tests include a pretest, unit tests (one for each video tape), midterm, and posttest. Materials are designed to be used in conjunction with video taped instructional units, and can be adapted for use in either group or individual situations.

SUBJECT AREA(S)

Seventeen 1/2-hour video taped instructional units and five video taped seminar discussions comprise a comprehensive training course in diagnostic and prescriptive reading. Title of all video tapes in the series are as follows:

1. DPRI Introduction
2. Informal Tests
3. Standardized Tests
4. Word Recognition Tests
5. Comprehension/Study Skills Tests
6. Miscue Analysis
7. Prescriptive Instructional Systems
8. DPRI Management
9. Reading Readiness - Beginning Reading
10. The Exceptional Reader
11. Word Recognition
12. Vocabulary
13. Study Skills
14. Comprehension
15. Reading in Content Fields
16. Developing Life-Long Readers
17. Total Reading Program

Seminars are not titled, but are video tapes of live presentations following programs 3, 7, 11, 16, and 17 above.

INTENDED USERS AND BENEFICIARIES

The program is designed specifically for all teachers of reading in grades K-6. Ultimate beneficiaries are those students who will benefit from the increased competencies of their teachers in the teaching of reading skills.

GOAL(S) OR PURPOSE(S)

The reading teacher who successfully completes the *Diagnostic and Prescriptive Reading Instruction Program* will be able to diagnose children's specific reading problems, locate procedures for teaching the needed skills, and implement appropriate instructional strategies.

PATTERNS OF USE

The DPRI program was designed as a comprehensive sequential series comprising a course in teaching reading skills. However, as a training program, the materials can be used either independently or together as an inservice program, as part of an inservice program, or as a complete course.

ASSESSMENT PROVISIONS

Teachers participating in the DPRI program are given a pretest to measure entry-level competencies; this test can also serve as a posttest. Also provided are unit tests (for each video tape in the series), as well as a midterm test.

TIME REQUIREMENTS

Each video taped instructional unit is 30 minutes in length; seminars are 60 minutes in length. Ancillary/laboratory materials accompanying each video tape will require an average of 2 hours for completion.

IMPLEMENTATION PROCEDURES

A video cassette player is necessary in order to show video tapes. Standard format of tapes is 3/4 inch video cassette.

DPRI program and materials are designed to be primarily self-instructional. The program does not require a specialist teacher. Instructional units may be presented in a small-group situation or in an individualized situation. No organizational changes would be necessitated in existing school structures for effective use of this product.

Video cassettes are reusable over a long period of time. The only consumables are the packet of ancillary materials, textual items (minimal), and written tests for each participant.

ASSURANCES AND CLAIMS

This product has been used with approximately 600 educators throughout 8 States. In addition, the State of Tennessee has adopted the product as inservice training for all teachers of reading in grades K-3. The product is transportable. Materials can be used effectively without the presence of a specialist teacher, without detracting from the quality of instruction presented.

Materials do not appear to display any form of social bias, including ethnic or sexual stereotyping.

The developers have not received any reports of harm associated with the use of this product.

MINICOURSE 2: DEVELOPING CHILDREN'S ORAL LANGUAGE

*A multimedia program to train teachers of grades K-3
to help students speak and think with more precision
and flexibility*

Minicourse 2: Developing Children's Oral Language trains teachers in using strategies to help children learn to speak and think with more precision and flexibility. The minicourse format, developed by the Far West Laboratory, is an attempt to allow teachers to "learn by doing." Instead of telling them what to do, the minicourse shows them what to do and, through microteaching, provides the opportunity for them to practice what they are learning and to observe and evaluate themselves. The minicourse format thus permits the course developers to focus on specific skills rather than on broad, general statements of how to improve teacher methods. Microteaching, in which teachers are video taped while practicing a lesson segment with a small number of students, was pioneered in the Stanford University intern program. Results to date have shown it to be more successful in training intern teachers than conventional training.

The instructional format for each sequence follows this pattern. A trainee will: (1) Read the appropriate section in the teacher's handbook, (2) view an instructional film and a model lesson film, (3) plan a 10- to 15-minute microteach lesson to be taught to four or five students, (4) microteach the planned lesson while video taping or audiotaping it, and (5) view or listen to the tape to evaluate one's own performance. (The minicourse permits teachers to evaluate themselves or be critiqued by colleagues rather than by supervisors.) The teacher replans the same lesson, reteaches and retapes it with a different group of students, and then reevaluates the performance. The materials of Minicourse 2 consist of the instructional films and teacher's and coordinator's handbooks.

SUBJECT AREA(S)

The subject area is inservice or preservice teacher training in language development. The teachers are trained in skills that will help children learn to use more precise and complex language.

INTENDED USERS AND BENEFICIARIES

Teachers in grades K-3 and teachers in grades 4-6 whose pupils speak English as a second language are the intended users.

GOAL(S) OR PURPOSE(S)

In preparing the course, the developers drew on the work of learning theorists to identify fundamental teaching behaviors that encourage language and thought development in children. In *Minicourse 2*, teachers are trained in teaching behaviors deemed critical to promoting language development in children with minimal language experience. These are defined as (1) expanding the complexity, flexibility, and preciseness of language and thought; (2) modeling new language patterns; (3) eliciting children's use of new language; and (4) providing specific praise for use of precise language.

PATTERNS OF USE

Minicourse 2 is an autoinstructional package. It consists of six 16mm color films, a teacher's handbook, and a coordinator's handbook. The four basic teaching behaviors are introduced in the first two sequences, and practice in applying them to teaching specific language skills follows in the remaining three sequences.

ASSESSMENT PROVISIONS

Teachers volunteer to take *Minicourse 2*. Teachers evaluate themselves using self-evaluation forms provided in the teacher's handbook. Teachers may choose to ask a colleague or supervisor to critique their microteach sessions, but it is not required.

TIME REQUIREMENTS

Four hours per week, for 5 weeks, 2 days per week for preparation, and 2 days for microteaching.

IMPLEMENTATION PROCEDURES

The coordinator should arrange for facilities to show the instructional/model films to participating teachers. A room to be equipped with the video taping equipment and seating for the teacher and four to five students should be set up and made available for microteaching.

The coordinator schedules the participating teacher's use of the microteaching room and should arrange for someone to relieve the teacher from regular classroom duties during microteaching.

Summary Cost Information

Initial cost to the user includes the purchase of the instructional films. The coordinator's handbook may be reused. Each teacher taking the course will require a handbook, as consumable evaluation forms and checklists are provided therein. Initially the school or district should provide a 20-minute blank video tape to be used by each teacher for microteaching and evaluation. These tapes can be reused by teachers taking the course later.

Personnel Required for Product Adoption and Implementation

A coordinator recruits teachers to take the course, introduces the course and methods to the teachers, sets up the course schedule, and maintains the video tape equipment. Any staff member could fill this role, but it is usually filled by a principal or district supervisor.

ASSURANCES AND CLAIMS

Participants in the main and operational field tests of *Minicourse 2* noted no detrimental effects of any course materials. Eighty-one percent of the teachers who participated in the operational field test felt that this minicourse was better than other inservice training they had taken, and 88 percent indicated the course was an improvement over their preservice training.

Minicourse 2 was field tested four times during its development. A preliminary test in May 1968 resulted in major revisions, and a new preliminary test was conducted that summer. Eight teachers participated. The main field test was conducted with 42 kindergarten teachers; 14 from Monterey, California; 16 from Watsonville, California; and 12 from Philadelphia, Pennsylvania. The socioeconomic status of these sites ranged from middle to lower class; and their ethnic representation included Afro-American, Phillipine-American, Mexican-American, and Anglo-American. Forty-eight teachers from nine sites participated in the operational kindergarten or preschool field test.

Data collected from the main field test showed *Minicourse 2* to be effective in training teachers in the target skills. Teacher use of extending phrases to sentences increased by 60 percent. Instances of refining meaning increased from an average of 0.95 occurrences to an average of 2.39. Significant gains were made in teacher use of specific praise, modeling specific positions words in context, eliciting observations of similarities and differences among objects, and providing language patterns for expressing comparisons. Gains were made in teacher use of action words: Verbalizing action in context, introducing other actions that illustrate the verb, and eliciting the use of the modeled verb.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Instructional/model films	1 set	1,400.00*	Reusable	
Teacher's handbook	1 per teacher	3.00	Consumable	
Coordinator's handbook	1	4.00	Reusable	
20-min. blank video tape	1 per teacher	22.00	Annually**	Any commercial dealer

*Instructional films may be purchased or rented for 6 weeks for $210.

**A video tape can be recorded, erased, and rerecorded about 400 times. Unless a teacher wishes to keep the tape, it can be reused about five times; each teacher taking the course needs a tape—he/she cannot share.

MINICOURSE 18: TEACHING READING AS DECODING

A self-instructional training sequence for teachers of beginning readers in grades K-3

Minicourse 18 is a self-instructional training sequence for teachers of beginning reading (grades K to 3) and for teachers of remedial reading through grade 6. The minicourse format, developed by the Far West Laboratory for Educational Research and Develpment, is an attempt to "learn by doing," instead of telling them what to do. The minicourse shows them what to do and, through microteaching, provides the opportunity to practice what they are learning and to observe and evaluate themselves. The minicourse format thus permits the course developers to focus on specific skills rather than on broad, general statements of how to improve teacher methods. Microteaching, in which teachers are video taped while practicing a lesson segment with a small number of students, was pioneered in the Stanford University intern program. Results to date have shown it to be more successful in training intern teachers than conventional training.

Decoding is defined in *Minicourse 18* as "translating written symbols into the speech sounds (the learner) already knows." Approximately 50 selected teaching strategies in 5 levels of skills of increasing complexity, all considered necessary to decoding, are justified, explained, demonstrated, and practiced through a coordinated, self-contained course. The developers state that the skills selected for the course are those that are considered critical to the decoding process, as determined by research and by the thinking of professional linguists. Not all of the skills involved in decoding are included (the developers have been selective) but those that are presented are intended to be useful with the wide variety of methods and materials used throughout the country. The five instructional sequences of the course teach procedures for helping children to recognize graphemes (letters); make grapheme/phoneme (sound) correspondences in consonant letters; make grapheme/phoneme correspondences in larger spelling units, including similar and contrasting words using "problem-solving techniques;" that is, attacking new words with any or all of the decoding skills learned. There is, in addition, one video taped review lesson. Two interesting features of the course are descriptions of ways to respond to errors that pupils make, and filmed segments of "negative behaviors" that teachers should avoid, each followed by the corresponding correct technique.

SUBJECT AREA(S)

Inservice or preservice teacher training in teaching decoding. Teachers learn techniques for teaching children to match like graphemes; to locate grapheme in initial, final, and medial position; to make grapheme/phoneme correspondences of "regular" and "irregular" consonants; to make grapheme/phoneme correspondences in similar spelling patterns, and bound morphemes; to use syntactic and semantic clues to decode words; and to use "problem solving" to decode unfamiliar words.

INTENDED USERS AND BENEFICIARIES

Teachers of beginning reading, grades K to 3, and of remedial reading, up to grade 6.

GOALS OR PURPOSES

To increase teachers' skills in the use of teaching processes proven effective for building pupils' decoding skills.

PATTERNS OF USE

To use the minicourse, teachers must practice (microteach) the procedures using either a small group of children from their own classes or another class as subjects who need instruction in the skills of the given lesson. Diagnostic tests for determining pupil skill level are provided. In addition, forms for planning and evaluating each microteach segment are included in the teacher handbook.

The activities for five instructional sequences, each representing one level of decoding skills, are divided into 5- or 6-day blocks: On the first day teachers are to read the appropriate chapter in the teacher handbook; view the video taped demonstration lessons and plan the first 10- to 15-minute microteach lesson on the second day; microteach, view, and evaluate the taped segment, and plan the second microteach on the third day; on the fourth, microteach, evaluate, and plan the third practice segment; on the fifth, microteach and evaluate and, if necessary, plan the followup lesson; the last day, teachers are to conduct and evaluate the followup lesson and read the next chapter in the handbook.

The five instructional sequences are presented in order of increasing complexity; however, use in class of the procedure taught in the course depends on the needs of individual classes and children. The trainee is expected to be familiar with the written material and to follow the lesson procedures as outlined. There is no evidence that course materials are effective when used separately.

ASSESSMENT PROVISIONS

Teachers volunteer to take *Minicourse 18* training. The course is self-instructional using written materials, filmed demonstration lessons, microteaching, and self-evaluation procedures. Groups of teachers may discuss the written material and view the filmed lessons together, and may even evaluate each other if they wish, but the microteaching must be done individually.

IMPLEMENTATION PROCEDURES

The coordinator should arrange for facilities to show the instructional/model films to participating teachers. A room equipped with the video taping equipment and seating for the teacher and four or five students should be set up and made available for microteaching.

The coordinator schedules the participating teachers' use of the microteaching room and arranges for someone to relieve the teacher from regular classroom duties during microteaching.

Summary Cost Information

Initial cost to the user includes the purchase of the instructional films. The coordinator's handbook may be reused. Each teacher taking the course will require a handbook as consumable evaluation forms and checklists are provided therein. The teachers resource kit may be shared by all teachers sharing the microteach room (not more than 10). Initially, the school or district should provide a 20-minute blank video tape to be used by each teacher for microteaching and evaluation. These tapes can be reused by teachers taking the course later.

The minicourses are designed to be used with video tape equipment so that teachers can see themselves perform. However, this minicourse can use a regular audiotape recorder instead of the video taping equipment. Through field testing, the Far West Laboratory discovered that for this particular course the use of tape recordings proved as effective as video tapes. Districts for which the purchase of a video taping system would be a financial burden may choose to use audiotaping.

Personnel Required for Product Adoption and Implementation

A coordinator recruits teachers to take the course, introduces the course and methods to the teachers, sets up the course schedule, and maintains the video tape equipment. Any staff member could fill this role, but it is usually filled by a principal or district supervisor.

ASSURANCES AND CLAIMS

Minicourse 18 was field tested in suburban and inner-city schools with 56 teachers. The course was proven to be effective for both, suggesting the course be offered to a wide range of teachers.

The literature on teaching reading as decoding was reviewed prior to the design of the course. *Minicourse 18* was developed on the basis of this literature review. A total of more than 187 studies and articles was reviewed. The course underwent careful testing and development before release in its final form. The main field test data suggest that the course was effective in changing teacher behavior. Teacher behavior changed in course-approved directions in 24 out of 29 of the behaviors explicitly taught in the course.

Independent use of the course without direct developer assistance occurred in Montgomery County, Md., Chicago, Ill., and Washington, D.C., thus proving the replicability and transportability of the course.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Instructional/model films	1 set	1,200.00*	Reusable	
Teacher's handbook	1 per teacher	4.00	Not reusable	
Coordinator's handbook	1	4.00	Reusable	
Teacher's resource kit	1 set	35.00	Reusable	
20-minute video tapes	1 per teacher	22.00	Annually**	Any commercial dealer

*Films may be purchased or rented for $210 for 6 weeks.

**A video tape can be recorded, erased, and re-recorded about 400 times. Unless a teacher wishes to keep the tape, it can be reused about 5 times. However, each teacher taking the course needs a tape.

MINICOURSE 22: TEACHING READING COMPREHENSION

A teacher training sequence to improve student comprehension in the reading process

Minicourse 22: Teaching Reading Comprehension was planned to complement *Minicourse 18: Teaching Reading as Decoding*. With both minicourses released, preservice and inservice teachers will be able to learn the skills and strategies required for teaching both the decoding (pronouncing) and the comprehension (understanding meaning) components of the reading process.

Reading comprehension is defined in this course as the grasping of the meaning of written material (literal comprehension) and the mental processing of that meaning, including the ability to analyze, synthesize, make inferences and draw them from personal experience, compare, evaluate, interpret, draw conclusions, appreciate, and apply.

The course is built upon the same instructional principles as other minicourses developed by the Far West Laboratory. The teacher trainee reads a lesson dealing with a specific skill, watches a film or videotape which offers more instruction or a modeling of the skill, practices the skill with a small group of pupils (microteach), and then evaluates use of the skill as demonstrated on a videotape or audiotape recording of the microteach session.

SUBJECT AREA(S)

Inservice and preservice teacher training in teaching reading comprehension.

INTENDED USERS AND BENEFICIARIES

The course is developed in modules; some are appropriate for primary grades and others are appropriate through grade 12.

GOAL(S) OR PURPOSE(S)

The course has been developed only in preliminary form. There are to be six modules. The five topics which have been developed are: (1) Beginning reading comprehension, to develop skill in establishing for pupils the link between the oral and printed forms of words (grades K to 1, 2 weeks); (2) providing interesting reading material for pupils to identify their reading interests and to provide materials appropriate to those interests (grades K to 9, 1-1/2 weeks); (3) providing questions to build reading comprehension, to build skill in framing questions on four levels of comprehension, and to lead pupils to ask questions about reading materials (grades 1 to 8, 2-1/2 weeks); (4) building meaning for linguistic units—sentences, words, paragraphs, selections—to develop skill in helping pupils extract meaning from printed linguistic units (grades 2 to 9, 4 weeks); and (5) providing purposes and skills for reading to develop skill in helping pupils learn the behaviors necessary for meaningful reading (grades 5 to 12, 5 weeks).

Module 6, measuring reading comprehension, had not yet been developed when work on this course was discontinued.

PATTERNS OF USE

The six modules are designed to be used independently or in combination with others. Each is self-contained, with its own procedures for self-selection and pretesting.

ASSESSMENT PROVISIONS

All modules are self-instructional. Teachers choose to take this course, and supervision is neither required nor suggested. Self-evaluation forms are included in the Teacher Handbook.

TIME REQUIREMENTS

Each module has a different time requirement. See "Goal(s) or Purpose(s)."

IMPLEMENTATION PROCEDURES

The coordinator should arrange for facilities to show the 16mm instructional/model films to participating teachers. A room having videotaping equipment and seating for the teacher and five students should be set up and made available for microteaching.

A staff member or the coordinator should be made available to relieve a teacher who is scheduled to microteach during class time.

MATERIALS AND EQUIPMENT

Work on this course was discontinued after preliminary development. Instructional materials include teacher's handbooks and instructional/model videotapes. This course follows the minicourse format developed by the Far West Laboratory. The final product would be composed of instructional/model films, teacher's handbooks, and a coordinator's handbook. Each teacher participant would need a video tape or audiotape system to record through sessions.

Personnel Required for Product Adoption and Implementation

A coordinator recruits teachers to take the course, introduces the course and methods to the teachers, sets up the schedule, and maintains the video tape equipment. Any staff member could fill this role, but it is usually filled by a principal or district supervisor.

ASSURANCES AND CLAIMS

No assurances of product effectiveness can be made at this point in the development of the course. The preliminary field test of each module was conducted independently with a small number of teachers. The purpose of this small preliminary test was to determine the usefulness of certain skills and whether they should be incorporated into the main version of the materials. These preliminary results indicated that the skills taught in the course had value to teachers and further development was recommended.

The development of this course began with a literature review of more than 200 sources related to various aspects of reading comprehension. From these abstracts, the development team identified the six modules of the course.

AIDS TO CURRICULUM PLANNING: ENGLISH LANGUAGE ARTS K-12

A set of aids which are excerpts of representative curriculum guides

The aids in this paper consist of excerpts of curriculum guides that are representative models for sections of the *Criteria for Planning and Evaluation of Curriculum Guides*. The criteria were established by the National Council of Teachers of English Committee on Curriculum Bulletins and were designed to facilitate the planning and evaluating of curriculums. These aids are intended to provide curriculum guide developers with a model, to present useful units to the classroom teacher, and to be used as reference material in college classes. Each of the seven sections in the book (philosophy, objectives, language, composition, media, reading and literature, and evaluation) is preceded by an explanation of criteria. Most sections include a model excerpt from an elementary, secondary, and total K-12 curriculum guide.

SUBJECT AREA(S)

Criteria, curriculum development, curriculum evaluation, curriculum guides, curriculum planning, elementary education, English instruction, language arts, and secondary education

INTENDED USERS AND BENEFICIARIES

The intended users of this book are the English language arts and curriculum builders—State and school systems and classroom teachers.

ALTERNATIVES IN ENGLISH: A CRITICAL APPRAISAL OF ELECTIVE PROGRAMS. ERIC/RCS INFORMATION ANALYSIS SERIES: GROUP I

A study of elective programs in English curriculums of American high schools during the last decade

An appraisal of elective programs in the English curriculums of American high schools during the last decade is presented in this paper. Elective courses are defined as programs at one or more grade levels which allow students to choose courses that appeal to them from a wide variety of offerings. The study is based on data from over 100 programs in 37 States. The examination proceeds from a discussion of the rationales for these programs to examinations of program structures, patterns of course offerings, course designs, and methods and results of evaluation. It concludes with a discussion of some of the important problems and promises of elective programs. Also included are a bibliography; a list of schools contributing program guides, questionnaire responses, and/or other materials; a list of schools to contact for information about their elective programs; and a copy of the questionnaire that was sent to the department chairperson participating in the study.

SUBJECT AREA(S)

The subject areas are composition (literary) elective subjects, English curriculum, English literature, English programs, high school curriculum, humanities instruction, individualized curriculum, language arts, literary genres, mass media, Negro literature, secondary school students, secondary schoolteachers, student-centered curriculum, student interests, and thematic approach.

INTENDED USERS AND BENEFICIARIES

All persons concerned with the teaching-of-English profession, particularly English teachers and curriculum planners at the secondary school level, are the intended users of this program.

RD 030 037

COMMUNICATION SKILLS ORIENTED CURRICULUM GUIDE

A program aimed at organizing the communication skills of students in grades K-12

To date, communication skills lists have been developed for grades 1 to 4. Each grade level skills list includes the areas of:

1. Reading skills
2. Written communications
3. Oral communications
4. Language skills for grades 2 to 4.

Each list identifies competencies which can be:

1. Mastered by the majority of the class
2. Mastered by some of the class
3. Mastered by very few students—some having familiarity with the skills.

SUBJECT AREA(S)

Language arts is the subject area.

The purpose of this guide is to organize, on a grade-by-grade basis, the various communications skills to which students should be introduced as they progress in the language arts area: Kindergarten through grade 12.

INTENDED USERS AND BENEFICIARIES

The K-12 guide is being developed for use by union 58 teachers in classrooms with students. Working with the component coordinator, teachers have been directly involved in identifying those communications skills and levels of competency which are applicable to their respective grades.

GOAL(S) OR PURPOSE(S)

The major goal is to develop a K-12 integrated and sequential language arts curriculum which provides students with continual learning and skills development opportunities.

PATTERNS OF USE

Once developed, field tested in classrooms, and revised (if necessary), grade level skills lists will be compiled into a K-12 communications skills oriented curriculum guide.

Copies of the guide will be given to union 58 schools in Groveton, Stark, and Stratford, New Hampshire. Teachers will be responsible for planning their classroom language arts programs in accordance with the skills guide content which is appropriate to their grade levels.

Working with the component coordinator, teachers will use the skills guide for purposes of developing objectives, activities, and evaluation strategies.

ASSESSMENT PROVISIONS

Within the near future, skills lists which have been developed for grades 1 to 4 will be field tested in union 58 classrooms. The feedback from teachers will form the basis for product refinement and revision (if necessary). A similar procedure will be used with other grade-level skills lists (5-12) as they are developed.

TIME REQUIREMENTS

The individual classroom teacher will determine the amount of time that is required for the development of skills in each classroom. The amount of time required for skills development in each grade will be, in part, determined by the abilities of students.

IMPLEMENTATION PROCEDURES

Teachers and the component coordinator develop skills lists for K through 12th-grade students. Each list is introduced into classrooms on a trial basis. Feedback is obtained from teachers who have used the lists for purposes of product refinement and revision (if necessary).

When all grades have developed and tested lists, the finished product will be compiled into a guide and given to Union 58 teachers for further development (objectives, activities, and evaluation strategies).

MATERIALS AND EQUIPMENT

As the skills listed are introduced and tested in union 58 classrooms, teachers will begin to identify those instructional materials that are required in order to implement "guide-related" objectives, activities, and evaluation strategies.

Initially, teachers will work with the materials and equipment found within the schools such as books, language master machines/programs, and listening stations. As a result of skills guide implementation in classrooms, teachers will be in a better position to identify additional materials and equipment.

Since classroom teachers have been involved in developing the grade level skills lists, the product content should relate to the abilities and skills of the "average" classroom teacher (at specific grades). In the majority of cases, there would not be any need for elaborate or technical training. In those instances where introductory training is needed, teachers can be involved in inservice workshops or short-term training sessions.

ASSURANCES AND CLAIMS

Assurances

To date, the Experimental Schools Program (ESP) project staff and Union 58 teachers have developed communication skills lists for grades 1 to 4. Shortly, these skills lists will be introduced into classrooms for purposes of implementation and evaluation—on a trial basis. The feedback gained from classroom teachers will provide the basis for refinement and revision (if necessary).

At this time, the Union 58 project cannot claim avoidance of risk and/or minimal comparative quality. The product has been developed with all students in mind. There has not been any intention to develop a sexist program. Both boys and girls are to be involved in learning and skills development activities.

Claims

There are no data available at this time which would enable the Union 58 ESP project to make claims of effectiveness, social fairness, or product development regarding the communication skills-oriented curriculum guide.

DEVELOPER/AUTHOR:

New Hampshire School Supervisory Union 58
Experimental Schools Program
Groveton Elementary School
Groveton, N.H. 03582

Gordon Schnare, Coordinator
Union 58 Teachers

AVAILABILITY

The original intention of the Union 58 ESP project was to develop a continual, integrated, and sequential language arts program for grades K-12. This remains one of the project's prime objectives.

At present, the component coordinator is working with classroom teachers (in an ongoing process) to develop skills lists for each grade. Once developed, field tested, evaluated, and refined, the grade level lists will be compiled into a K-12 curriculum guide.

The product has not been totally developed, to date, nor has any part of it been copyrighted. Samples of the skills lists developed as of March 1975 are available from the School Supervisory Union 58 of the Experimental Schools Program as follows:

Experimental Schools Program
Groveton Elementary School
Groveton, N.H. 03582

LANGUAGE LEARNING, LANGUAGE DEVELOPMENT: A BIBLIOGRAPHY

A reference to materials on language development and language learning for preschool children

This bibliography includes references to materials on language development and language learning in young children—from infancy through the earliest school experiences. Topics included are receptive, communicative, and expressive language as well as particular aspects of language imitation and production. Entries are from many sources, including *Resources in Education* (RIE) and *Current Index to Journal in Education* (CIJE).

SUBJECT AREA(S)

Subject areas of documents cited in this bibliography include: Language development, oral language curriculums, family interaction patterns affecting language development, and measures of early language functioning.

INTENDED USERS AND BENEFICIARIES

This bibliography was prepared to provide early childhood teachers, program consultants, researchers, and parents with current references to language learning and language development. It is also of interest to social workers, psychologists, and students.

GOAL(S) OR PURPOSE(S)

The purpose of this bibliography is to provide references to current research reports, program descriptions, reports of social interaction patterns in the family, and measures of language function in response to continued requests for information on language development.

MISCUE ANALYSIS: APPLICATIONS TO READING INSTRUCTION

A series of essays on the subject of miscue analysis

This monograph is a series of essays on the subject of miscue analysis, a diagnostic procedure rooted in the psycholinguistic view of reading. The focus of miscue analysis is on the broad field of reading comprehension rather than the isolated decoding of individual words and letters. The contents of this book include: "Introduction" by Rosemary Winkeljohann; "Miscues: Window on the Reading Process" by Kenneth S. Goodman; "Miscue Analysis for In-Service Reading Teachers" by Yetta M. Goodman; "Miscue Analysis and the Training of Junior and Senior High School English Teachers" by Jay B. Ludwig and James C. Stalker; "The Module and Miscue" by Jayne A. DeLawter; "Clinical Uses of Miscue Research" by William D. Page; "Building Instructional Materials" by Laura A. Smith and Margaret Lindberg; "Miscues of Non-Native Speakers of English" by Catherine Buck; "Using Miscue Analysis to Advise Content Area Teachers" by Ernie Nieratka; "Miscue Analysis in a Special Education Resource Room" by Suzanne Nieratka; and "Helping the Reader: From Miscue Analysis to Strategy Lessons" by Dorothy Watson. A bibliography is also included. (See ED 058 008, ED 039 101, and CS 000 667 for related documents.)

SUBJECT AREA(S)

Subject areas are developmental reading, oral reading, reading, reading comprehension, reading development, reading diagnosis, reading improvement, reading instruction, reading materials, reading processes, reading research, and reading skills.

INTENDED USERS AND BENEFICIARIES

The intended users of this book are elementary teachers.

RECOMMENDED ENGLISH LANGUAGE ARTS CURRICULUM GUIDES K-12 AND CRITERIA FOR PLANNING AND EVALUATION, 1974

An annotated list of curriculum guides for schools revising their language arts programs

This document contains an annotated list of curriculum guides which may serve as models for schools revising their programs and seeking a variety of sample frameworks, units, and lesson plans. The guides are taken from those sent to the National Council of Teachers of English during the past 3 years. Most of them are available for purchase from the schools and agencies responsible for producing the guides. Many are also available from the ERIC Document Reproduction Service (EDRS). The revised criteria for the planning and evaluation of English language arts curriculum guides are also included. These criteria include an evaluation of each guide's philosophy, policies and procedures, objectives, organization, and process as content. They also deal with the guides' design and treatment of language, composition, media, reading and literature, and evaluation.

SUBJECT AREA(S)

Language arts, curriculum guides, curriculum evaluation, elementary education, secondary education, educational resources, curriculum development, English programs, and English curriculums.

INTENDED USERS AND BENEFICIARIES

The intended users of this document are English supervisors, language arts coordinators, curriculum directors, curriculum committees, and teachers in general.

TEACHER EFFECTIVENESS IN ELEMENTARY LANGUAGE ARTS: A PROGRESS REPORT

A survey of recent research on teacher behaviors associated with pupil "success"

This survey of recent research on teacher behaviors probes seven areas of elementary language arts teaching: Teaching linguistics to elementary and preschool children, teaching listening skills to children in the elementary school, teaching literature to children, children's oral language/speaking, reading instruction, spelling instruction, and the teaching of writing. Answers were sought to these questions: (1) Which teaching behaviors are associated with pupil "success" as defined in the respective studies? and (2) How can one identify and describe these activities in the classroom milieu? It was concluded that gaps exist in the crucial area of "precise activities at points of interaction between teacher and pupil." In addition to sections reporting on each of the seven areas probed, the book includes "Plan for a Five-Phase Study of Teaching Effectiveness," "Criteria of Excellence in Teaching the Language Arts," "Evaluative Instruments and Pertinent Research," and "A Forward Look." The book is being used in teacher training institutes.

SUBJECT AREA(S)

Composition (literary), educational research, effective teaching, elementary education, language arts linguistics, listening skills, literature, oral expression, reading instruction, spelling instruction, teacher behavior, and teaching methods.

INTENDED USERS AND BENEFICIARIES

The intended users of this product are decisionmakers, teacher trainers, administrators, and school boards of education.

OVERVIEW

AUDREY B. CHAMPAGNE
Co-Director
Individualized Science Program
Learning Research and Development Center
University of Pittsburgh
Pittsburgh, Pennsylvania

and

LEO E. KLOPFER
Research Associate
Learning Research and Development Center
University of Pittsburgh
Pittsburgh, Pennsylvania

The ability to think and reason is the most distinctive characteristic of the human species. It is this ability, more than any other, that has made it possible for human beings to survive in the struggle for existence and to control, in large measure, their environment. This being the case, one might expect that the development of the ability to reason would be the primary emphasis of the human species in transmitting its heritage to its youngsters through their education in the schools. In actuality, however, school instruction in the United States prior to the second decade of the present century rarely gave systematic attention to developing children's ability to reason and to solve problems. Even today, the development of children's reasoning and problem-solving skills can hardly be said to be the central concern of most schools.

This is not to suggest that there has been a lack of research concerned with reasoning and problem solving, nor that there has been a dearth of ideas for techniques and procedures to develop children's skills in this area through their school experiences. On the contrary, there is considerable research activity and pedagogical discussion concerning reasoning and problem solving so that a considerable body of literature has accumulated.[1] Only some highlights of that large literature can be conveyed in this brief overview of how reasoning and problem solving are related, and how children's skills therein may be developed in school classrooms.

The relationship that exists between reasoning and problem solving is exemplified in the work of Jean Piaget, the Swiss genetic epistomologist, who for nearly half a century has engaged in research to broaden our understanding of the question, "How does knowledge grow?" One facet of Piaget's inquiry into this question has been to study the development in humans of the ability to reason, to incorporate a system of logic into their thinking.[2]

Piaget assesses the extent of an individual's ability to apply logical processes by presenting the individual with problems to solve. For the infant, a typical problem might be to find a toy hidden under a pillow. An eight-year-old might be asked to compare the areas of a square and a rectangle whose perimeters are equal. A problem appropriate for a teenager might be to predict the level of water in the left side of a U-tube when water is added to the right side. Piaget and his coworkers have confronted hundreds of children with these and other problems drawn from science and mathematics. The responses to the problems children give and the reasons for their responses are carefully analyzed to determine what logical processes underlie the responses and reasons given. A child's ability to think logically, i.e., to reason, is assessed by the extent to which his or her answers reflect the tenets of a system of logic.[3] Hence, the Piagetian problems serve as probes into the ability of children to reason.

The work of Piaget has provided educators with both descriptive information and a theory of how the ability to reason develops over time.[4] The descriptive information has great potential value to educational practitioners. It offers teachers a tool they can use to understand better how their students are reasoning and why students of a given age give the kinds of responses to questions that they do. It informs curriculum developers about the kinds of manipulative and cognitive activities that are appropriate for children at different levels of cognitive development. Piaget's theory, which describes

Dr. Audrey B. Champagne and Dr. Leo E. Klopfer are currently engaged in the development of an Individualized Science *curriculum series at the Learning Research and Development Center. One objective of the curriculum is the development of pupil reasoning and problem solving skills.*

---

[1] One indication of the vastness of the reasoning and problem-solving literature is this: a computer search of the ERIC files, using "reasoning" and "problem solving" as descriptors revealed that the output covering just the educational literature of the 8-year period, 1968-1975, was several hundred citations.

[2] It is generally agreed that the ability to think logically or to reason implies an integration of the thinking processes with a system of logic. Implicit in the writings of many individuals who consider the question of what constitutes reasoning is the assumption that there is but a single system of logic. This is simply not the case. Different philosophers have formulated quite different logical systems, and no all-encompassing system of logic has yet been devised. The canons of one system of logic are not necessarily equivalent to, nor translatable into, the canons of another system. Thus, an adequate definition of reasoning must consider not only thought processes but the philosophy from which the logical system derives.

[3] The relationship between the logical requirements of the task and the logic of the system reflected in the person's thinking is discussed by Jean Piaget and Barbel Inhelder in *The Growth of Logical Thinking From Childhood to Adolescence* (New York: Basic Books, 1958).

[4] The work of Piaget describes several cognitive developmental levels through which children progress, each characterized by specifically defined reasoning capabilities. While there is some controversy concerning ages at which children progress from one level to the next, the existence of the levels and the fact that individuals pass through levels in sequence is generally accepted.

how the ability to reason develops, has potential for the design of educational environments and curricular materials that will help children develop more effective reasoning skills more efficiently. Piaget's work has been available to the United States educational community for many years, but it has not as yet had a significant effect on educational practice.[5]

Educators seeking information and ideas that they can apply to educational practice often turn to the research of psychologists. Teachers and psychologists both are interested in problem solving; their perspectives, however, are quite different. Classroom teachers are, of necessity, concerned with the broad range of everyday problems their students face.[6] Learning psychologists, who investigate problem solving as a facet of their broader research on thinking, generally focus their inquiries on problems of a more formal nature. However, only some of the problems investigated by learning psychologists are directly related to the formal problems that children confront in schools.

Another difference in teachers' and psychologists' perspectives on problem solving is a difference in goals. Learning psychologists investigate problem solving as a contribution to the goal of fully describing how people solve problems and identifying task variables, thinking styles, and personality traits that influence problem-solving behavior. The goal of practicing educators is to teach people to be creative problem solvers. As yet, neither the learning psychologists nor the educators have made sufficient progress toward their respective goals to aid in any substantial way the work of the other.[7]

The lack of success on the part of the psychologists can be attributed to the chaotic state of the field.[8] There are three quite distinct approaches to the study of problem solving within learning psychology. These may be described, generally, as the Gestalt/cognitive approach, the stimulus-response/learning theory approach, and the computer simulation approach. Separate lines of research on problem solving are being actively pursued under each approach at the present time, with currently the greatest activity under the learning theory and computer simulation approaches. Little or no attempt has been made to integrate the several approaches, and this separation presently is a major calamity of the learning psychology field.

The lack of progress on the part of educators can be attributed to the fact that, although the developing of students who reason logically and successfully solve problems is an oft-proclaimed outcome of schooling, concerted attention rarely is given to achieving this outcome in most classrooms today. This situation exists despite the availability of various instructional techniques, procedures, and materials designed to develop specific reasoning and problem-solving skills, and despite the findings in experimental studies that children's skills can indeed be improved through the use of these techniques, procedures, and materials.[9]

The impetus to develop such materials and procedures for children in the United States schools can be traced in virtually every instance to the inspiration of John Dewey, and in particular to his classic book, *How We Think*, which he addressed to educators in 1910 (revised edition, 1933). Dewey stressed the importance in the educative process of what he called "reflective thinking," analyzed and discussed its phases, and offered many ideas for promoting reflective thinking in school and classroom practice. Most of what has since been done to promote children's reflective thinking through classroom instruction represents an elaboration of Dewey's ideas (although they have sometimes been misinterpreted) and the acceptance (usually without question) of his system of logic. This work has acquired various labels over time, including such rubrics as: scientific thinking, critical thinking, logical reasoning, method of intelligence, problem solving, discovery learning, and inquiry.[10] Regardless of the various labels used, the procedures that have been devised and the materials that have been prepared seek to develop some portion of children's reasoning and problem-solving skills, usually in conjunction with the study of a particular school subject.

The elementary school subjects most frequently allied with the development of these skills are science, social studies, and mathematics. Thus, these subjects generally serve as the medium upon which children's reasoning and problem-solving skills can grow. But, to the extent that science, social studies, and mathematics are taught didactically and with an emphasis on acquiring information, the potential for growth in reasoning and problem-solving skills goes unrealized. To engender this growth, the obvious need is for teachers to reduce the amount of didactic and information-building instruction in favor of those procedures and materials that teach science, social studies, and mathematics with an emphasis on reasoning and problem solving. It is not a question of the availability of suitable, effective nurturing media, but of their more widespread utilization.

---

[5] It is true that, within the past 15 years, psychologists and science and mathematics educators have carried out studies related to Piaget's theory and designed curriculum based on this theory. Teachers have been taught about Piaget's theory and read about his work. However, the theory has not been translated into the kind of understanding that teachers must have to apply it effectively to classroom practice. Consequently, the potential of Piaget's work has not been realized on the United States educational scene.

[6] Elementary school children confront many problems in the course of a schoolday ranging from very personal problems (Why is the teacher annoyed with me and what can I do about it?) to very practical problems (How can I get Sarah to trade her bologna sandwich for my egg salad sandwich?) to the formal problems most often associated with the formal educative process (How do I subtract 9 from 0 when confronted for the first time with subtracting 29 from 50?). Only the formal problems are considered in this overview. The more formal problems are also the type studied by learning psychologists.

[7] The fact that psychologists and educators have not been more successful in their attempts to develop a theory or theories of human problem solving cannot be attributed to a lack of effort on their part. The research reports and discussions on these matters constitute an extensive literature, as already indicated.

[8] Davis, in *Psychological Bulletin*, Vol. 66, No. 1, begins his 1966 review of the field with these words: "Research in human problem solving has a well-earned reputation for being the most chaotic of all identifiable categories of human learning."

[9] The findings of these studies are widely scattered in the educational research literature, and no comprehensive summary of them has been published. Citations and discussions of pertinent selected studies may be found in: Catherine Patrick, *What Is Creative Thinking?* New York: Philosophical Library, 1955; Gary A. Davis, *Psychology of Problem Solving*. New York: Basic Books, 1973; and "Teaching the Young To Think," *Theory Into Practice*, Vol. 12, No. 5, December 1973.

[10] No small amount of confusion has been engendered by the introduction and use of these labels, and the commonalities to be found under the various rubrics are sometimes not readily apparent. To be sure, there are identifiable differences among the techniques and approaches listed, and no simple equating of them all is being implied. Rather than undertaking a long-winded dissertation on the differences, we prefer to focus here on one significant common characteristic.

With respect to both research and practice, reasoning and problem solving is today an area of unrealized potential.

NIE products

The products described in this *Catalog* may be divided into two categories. These are:

- Comprehensive curriculum packages often supplemented with teacher-training and/or pupil-assessment materials designed to aid pupils attain specified reasoning or problem-solving skills; and
- Teacher-training materials which provide guidance to the classroom teacher who wishes to incorporate reasoning and problem-solving activities into the teaching of traditional subjects such as reading, mathematics, and science.

Curriculum packages

Three comprehensive curriculum packages designed for use with elementary schoolchildren are included in the *Catalog*. These are: The Perceptual Skills Curriculum developed by the Learning Research and Development Center; the SWRL/Ginn Instructional Concepts Program (ICP) developed by SWRL Educational Research and Development Center; and the Language and Thinking Program (LAT) developed by the Central Midwestern Regional Educational Laboratory (CEMREL, Inc.). The Perceptual Skills Curriculum comprises four instructional programs: Visual motor, auditory motor, general motor, letters and numerals. The package is designed to be used developmentally with children from preschool through second grade. Criterion-referenced tests are provided to aid the teacher in assessing the skill level of a child entering the program and to insure that each child attains required skills before entering a new phase of the program. The ICP program provides materials and procedures to assist a teacher in promoting a child's understanding of concepts such as color, size, shape, and amount. Criterion exercises are provided for each instructional unit to aid the teacher in identifying children who need additional instruction.

The LAT program is divided into two levels. Level I is designed for children ages 3 to 7; Level II is designed for children ages 8 through 12. Each program includes a series of packages that promote intellectual development and reasoning ability. Level I packages focus on the development of language arts, prereading, and cognitive skills. Visual and auditory discrimination, verbal response skills, categorization, association, sequencing, and critical-thinking skills receive primary emphasis. Level II packages focus on the development of skills required for comprehension and reasoning in both written and oral form. Each package is accompanied by teacher-training and criterion-testing materials.

Research for Better Schools, Inc., has developed a curriculum package for use with secondary school pupils. This package, Making Judgments, provides programmed instructional units which assist pupils in developing, understanding, and evaluating argumentative assertions and value judgments and in generating and testing causal inferences.

Two curriculum packages developed by the Learning Research and Development Center provide the pupil with practical experience in problem solving through computer programming. These packages, Series Computer Assisted Instructional Program (Series) and Logo Teaching Manual, include a software system and user's manuals which allow pupils from grade 1 to 12 to learn to state problems, gather data, and test hypotheses through interaction with the computer system.

Teacher-training materials

The *Catalog* describes four sets of teacher-training materials: Development of Higher Level Thinking Abilities (HLTA) and Facilitating Inquiry in the Classroom, developed by Northwest Regional Education Laboratory; Minicourse 9: Higher Cognitive Questioning, developed by the Far West Laboratory for Educational Research and Development; and Thinking and Reasoning Teacher Development, developed by Southwest Educational Development Laboratory. Each of these packages provides a series of instructional units which may be used by or for a campus course or inservice workshop. Each of the programs includes small-group discussions and simulations to prepare teachers to use teaching strategies that encourage students to develop higher level thinking abilities.

ACHIEVEMENT COMPETENCE TRAINING (ACT)

A multimedia course to teach 5th- through 7th-graders
a strategy for setting and achieving their own goals

Achievement Competence Training (ACT) is a multimedia, partially programed course designed to teach 5th-, 6th- and 7th-grade children a behavioral strategy for setting and achieving their own goals. The program builds competence in goal achievement, helps children set realistic levels of aspiration, and enhances belief in internal control. Belief in internal control is defined as the degree to which individuals view themselves as in control of their lives. This belief is an important variable which is positively related to academic achievement, social responsibility, healthy interpersonal relationships, and personal adjustment. ACT was developed in response to the increased alienation from society by individuals who do not believe that they can have any influence on their environments and do not believe that they can significantly influence the course of their own lives.

The heart of ACT is a six-step strategy for goal achievement. In the first step, Study Self, children learn techniques for gathering data about themselves. They recall past achievements and think about their strengths—things they do well. In the second step, Get Goal Ideas, they use individual and group brainstorming techniques to generate as many goal ideas as they can, based on their past achievements and strengths. In the third step, Set a Goal, they mold goal ideas into specific medium-risk goal statements and actually set a personally meaningful goal. Plan, the fourth step, teaches children to name the tasks in order. In the fifth step, Strive, children explore their striving style. They are encouraged to try out various techniques which people have used to persist in accomplishing a task. Finally, in the sixth step, Evaluate, children decide whether they achieved their goals, what specifically they did well and what they could improve, and how well they used the strategy.

The strategy itself is presented in four six-part units of work. Following the first unit, each unit calls upon the child to actually set a goal and strive for it, building on previously learned skills and using the self-study data. To help the child practice the achievement strategy, ACT uses audiotapes, student journals, filmstrips, music, sound effects, dramatizations, meditative trips, personal surveys, and games. In a typical lesson, students listen to a tape that presents concepts, describes alternative solutions to problems, and calls upon them to engage in a variety of activities. Each student has a journal notebook to use at the desk or with small groups of other students as directed by the tape. Student learning of the course content is evaluated through the use of pretests and posttests throughout the course and by a mastery test at the end of the program.

The ACT package is self-contained and self-instructional. The teacher's role is essentially that of facilitator and counselor. No special teacher training is necessary. The audiotapes lead the children and the teacher through the content and give directions for all activities. The teacher need spend only 1 hour or so in reading the introductory materials and about 5 to 10 minutes in previewing each lesson.

SUBJECT AREA(S)

Achievement competence.

ACT's content is made up of a six-step strategy for goal achievement: (1) Study Self, (2) Get Goal Ideas, (3) Set a Goal, (4) Plan, (5) Strive, and (6) Evaluate.

INTENDED USERS AND BENEFICIARIES

ACT has been designed for children in grades 5, 6, and 7 with a mean class reading level of 3.5 and above. Research shows that it is at the 5th-grade level that children begin developing skills in abstract thinking and conceptualization so that they can create hypotheses and draw logical conclusions. They also learn how to gain recognition through producing things. Although the ACT strategy and skills would be useful for older children, the art in the journals and the examples on the tapes might be rejected as being too childish by pupils above the 7th grade.

GOAL(S) OR PURPOSE(S)

ACT has three goals: (1) To teach the children to be more competent in achieving their own goals, (2) to increase children's awareness of their ability to achieve by helping them develop more realistic levels of aspiration, and (3) to enhance children's belief in internal control by giving them a greater sense of agency—a feeling that what they do makes a difference in their own lives. The program also contributes to the enhancement of self-directed activity and self-responsibility in learning and achievement.

PATTERNS OF USE

Children may use the ACT strategy either individually or in small groups. The strategy itself is presented in four units of work. Unit I builds the vocabulary and behaviors needed to use the package. It provides an introduction and an overview of the central concepts. Unit II focuses on the skills that compose the steps of the strategy. Children are given practice and experience in using striving techniques and in gathering information about themselves. Unit III reviews and enlarges the strategy. In this unit, the children begin to put the skills together, using the strategy as their own instrument. Finally, unit IV requires students to synthesize skills learned in previous units as they work together to achieve a group goal. In this activity, the entire class uses the ACT strategy to set, plan, and strive for a relatively complex goal. The entire program, including instructions for its use, is on audiotape. The lessons are individualized, in that they ask students to contribute personal data to the children's learning by presenting the models, answering questions, giving individual assistance, and sanctioning the instructional message.

ASSESSMENT PROVISIONS

The package contains posttests, an ACT mastery test, and student journals in which learners themselves record their progress. Criteria for assessing journal page responses and for scoring the posttests and a scoring key for the mastery test are provided as part of the ACT package. An optional testing package is also available. The testing package provides all the instruments necessary to conduct a pretest and posttest assessment to measure the effect ACT has had on learners in building self-esteem, enhancing belief in internal control, and applying the ACT concepts.

TIME REQUIREMENTS

Each of the four six-part units is divided into three lessons which last 15 to 20 minutes. The teacher may use each lesson separately at different times during the day or separately on different days, or may combine the three lessons in one time period. The total course takes about 32 hours of class time.

IMPLEMENTATION PROCEDURES

ACT is adaptable to all kinds of learning settings from an open classroom to a highly rigid, subject-oriented structure. No special resources or organizational changes are necessary. The only additional equipment needed are items usually already available in schools (e.g., audiotape cassette player, filmstrip projector, and movable desks). The teacher need only schedule time within the day to use ACT.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

ACT was independently evaluated for unintended side effects with 5th-grade classes in three schools of the Washoe County School District in Reno, Nevada. In his report on the evaluation, G. Paul Killian, director of research and development for the district, indicated that the effects of the program were clearly positive both for individual children and for the classes as a whole. No instances of physical, psychological, or sociological harm as a result of the program's activities were reported.

Assurances of Social Fairness

During the development of the ACT programs, the development team invited members of the Black Caucus, a recognized employee group within Research for Better Schools, Inc., and an informal group of women, who identified themselves as interested feminists, to participate in the formulation of a policy statement bearing on racial and sexual bias. Statements were developed by both groups. Members of the two groups were then invited to use these policy statements to review the ACT materials and suggest changes. They did so, and the changes were made as suggested. In addition, the editors of the Webster Division of McGraw-Hill Book Co. have reviewed the ACT materials using their policy statement as a guide and have found the ACT materials to be in compliance.

Assurances of Replicability and Transportability

ACT materials are now being or have been successfully used in approximately 53 schools in 18 States in the United States, as well as in Guam and Australia, without developer assistance of any kind. The teacher's manual, provided with the package, is sufficient for a teacher to successfully administer the course.

Claims of Effectiveness

A field test and an evaluation of the ACT materials were conducted with over 3,000 children in 32 schools in the Philadelphia area. The evaluation compared the effectiveness of the ACT materials, both with a similar curriculum treatment and an uninstructed control group. The groups tested were equal in IQ and test anxiety and were matched for socioeconomic status.

A battery of tests, some standardized and some especially developed, was administered to the children. These tests included measures of self-esteem, internal control, content mastery, application of content, risk taking, achievement attitude, planning ability, task-ordering ability, fluency in listing strengths and goal ideas, and self-selected versus other-selected activities outside of school.

The following clearly defined effects emerged from the evaluation:

1. The ACT materials do teach the strategy. A stringent scoring of the ACT master test (which is a criterion-referenced measure of course content) revealed an average student score of 24 out of a possible 36 points.

2. Those who had ACT set more realistic standards for personal achievement.

3. ACT does enhance internal control.

4. Those who had ACT successfully transferred the strategy concepts to other simulated situations and showed movement toward an increase in positive self-evaluation.

A detailed report of the findings is contained in "Achievement Competence Training, A Report, Part VII: Field Test and Evaluation." The evaluation results were independently reviewed by Richard C. Teevan, Chairman of the Psychology Department of the State University of New York, Albany. He substantiated the findings.

Claims of Social Fairness

The ACT program not only avoids social bias, but also deals with sex and race without being negative. Through visual and aural modeling, girls as well as boys set and attain their own goals in both "typical" and "less typical" tasks. Boys and girls are taught skills which enable them to be self-directed, free, and independent without regard for culture-bound roles.

Claims of Careful Product Development

The instructional strategy which is the heart of ACT is the result of an extensive search of over 600 documents which focus upon effective goal setting and attainment. The content of the materials has been reviewed by Pauline Sears, of Stanford University; Evan Keislar, of the University of California, Los Angeles; and Richard Teevan, of the State University of New York at Albany. They described the content as being exciting, valuable, important, and effective.

The format of the materials was developed from the literature analysis, from selected surveys of what was actually accepted and used in the classrooms, and from an examination of existing instructional materials.

The materials themselves underwent four major tryouts, each with an increased level of sophistication and complexity. The tryouts began with 1 class of 12 children and culminated in a major field trial and evaluation involving 3,000 children in 32 schools. As a result of each tryout, the materials were further refined. Concepts were dropped and added, merged, and distinguished, until the children gave evidence that they understood the concepts and could successfully meet the requests for participation made by the materials.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Classroom set: Audiotape cassettes; filmstrips; teacher's manual; game materials; achievement worksheets and posters; posttest, mastery test, and remedial Webstermasters	1 set per class of 25 students	129.00	Reusable except worksheets and posters (consumable yearly) Webstermasters (consumable 2-3 years)	
Student journal	1 per pupil	4.26	Consumable yearly	
Worksheets and posters	1 set per 25 students	5.31	Consumable yearly	
Posttest, mastery test, and remedial Webstermasters	1 set per 25 students	9.65	Consumable 2-3 years	
Teacher's manual (extra copy optional)	1 per classroom	13.71	Reusable	
Evaluation test package (optional)	1 set per class of 25 students	3.50	Consumable yearly	Research for Better Schools, Inc., 1700 Market St., Philadelphia, Pa. 19103
ACT Teacher Training* Workshop: Self-instructional package designed to teach the use of the ACT strategy in the classroom.	5 audiocassette tapes 1 coordinator's manual 1 set of worksheets	Not determined		
ACT Achievement Competence Training: A Report				
Part V—Utilization of Formative Evaluation Data (1975)		6.00		
Part VII—Field Test and Evaluation (1974)		4.00		
Part VIII—Anecdotal Reports, Exhibits and Structured Interviews (1974)		6.00		
Part X—Locus of Control, A Study of the Correlates (1974)		6.25		

*This workshop is not a prerequisite for using the ACT materials.

INVESTIGATING YOUR ENVIRONMENT

An instructional unit allowing secondary students to select and investigate an environmental question

Investigating Your Environment is a 6- to 9-week instructional unit (module) for students between junior high school age and adulthood. Using the definition of environment as "anything external to you that affects you," students are given opportunities to select and investigate a question that they consider important for themselves and others. The emphasis is on decisionmaking and learning how to learn. Students, working individually or in small groups, select the problem to be investigated, formulate researchable questions, plan and conduct investigations, and communicate their findings in a way they consider appropriate. No investigations are predesigned. No questions are predetermined. Rather, students work in an atmosphere of freedom and trust to devise and conduct investigations they consider meaningful.

The program's rationale is based on some important objectives and findings. First, there is ample evidence to suggest that no significant environmental question can be answered within the context of a single discipline. During field testing of *Investigating Your Environment*, it was found that "real" questions—those that students want to answer—usually require inputs from a variety of disciplines and subject matter areas. The curriculum also assumes that learning how to deal with a question is more important than absorbing numerous facts about a given topic. Educators and curriculum developers today cannot be certain of which facts are going to be most relevant to tomorrow's decisionmaking. Understanding and deciding about environmental questions requires a knowledge of how to obtain and interpret facts. To accomplish this end, it is believed that students should have experience with these processes—gaining information and insights as they progress. It has also been found that such experiences develop feelings of personal competence and skill in self-directed activity, learning, and decisionmaking.

SUBJECT AREA(S)

Junior high, senior high, college, and adult science, life science, social studies, and environmental studies are the subject areas.

Investigating Your Environment includes a comprehensive teacher's handbook that suggests ways of introducing the program, makes appropriate administrative arrangements, orders equipment and supplies, and facilitates students' investigations.

The student's handbook includes guides for designing an investigation and for analyzing reports. The bulk of the book is devoted to techniques which students may select and use when appropriate to their problem. Techniques are included for measuring air and water quality, studying populations, sampling opinions and attitudes, and investigating noise and land use. Suggestions are given for utilizing the resources of the library, government and private agencies, and community groups.

The program also includes eight paperback books of resource materials. The books include articles from a variety of sources such as "BioScience," "Science," "Saturday Review," "The New York Times," and "Environment," which, when necessary, have been rewritten to the reading level of students and lay citizens. The eight books are *The Environment: Some Viewpoints*, *The Price of Progress*, *Food for Humanity*, *Human Population*, *Solid Wastes*, *Pesticides*, *Land Use*, and *Water Quality*. The paper collections serve as data sources, as exemplars of research design, and as a forum for divergent opinions on controversial environmental topics.

INTENDED USERS AND BENEFICIARIES

The course is appropriate for secondary school, college, and adult classes. The experience of selecting a problem of importance to the individual and actually investigating the questions associated with the topic chosen is valuable for students of all ages. The initial field testing of the module was conducted with high school biology classes. Since that time, inservice workshops have been conducted, training teachers to use the materials at the junior high school and college level. The materials are also being used in teacher training courses.

GOAL(S) OR PURPOSE(S)

The major goals identify one overall objective: To allow each student to explore new ways and develop abilities for problem solving and answering real questions by encouraging and providing the opportunity for individual choice, decisionmaking, responsibility, and commitment; interaction and communication with others; exploration of the educational environment beyond the school; and independent learning consistent with the student's cognitive ability and interests.

REASONING AND PROBLEM SOLVING

RD 040 002

PATTERNS OF USE

Students begin the unit by considering their own values and the things the environment must supply in order to obtain the quality of life they desire. Lists of values and environmental concerns vary within any class. Based on what they value, students select relationships between environment and lifestyle that they consider important enough to investigate. Through a series of discussions, relationships are turned into researchable questions.

Once the questions are identified, students design and carry out investigations. This data-collection phase usually requires 3 to 4 weeks of research time, both within and outside the classroom. The data-collection phase may involve such things as water or air testing, phone calls and appointments with representatives of appropriate government agencies and private groups, traffic or noise surveys, and interviews and questionnaires designed to sample public opinion and attitudes. Students are encouraged to obtain "new" data that they collect themselves and to combine their own findings with data from other sources, drawing upon libraries and "people resources" in an attempt to answer their questions. Once data are collected, students analyze what they have found, often discussing their results with teammates, other members of the class, and the teacher. Students next prepare to present their findings in some appropriate way—perhaps through articles and letters to newspapers, through class reports, or through discussions and presentations to community groups (tables, graphs, and other visual aids are often used in communicating findings).

ASSESSMENT PROVISIONS

In this program, the most important function of assessment is to provide feedback to the learner. In the context of investigating real questions, such feedback helps the learner adjust, revise, or refine investigation plans or procedures and evaluate progress. The nature of this curriculum makes it virtually impossible for teachers to make comparisons of students' performances. Most of the questions that students choose to investigate have not been previously investigated, at least not in the context which the student defines. Therefore, there are no standards for comparison. Furthermore, it is impossible to compare one investigation with another. An investigation of water quality is quite different from one on human nonverbal communication.

The module's goals emphasize decisionmaking and learning how to learn. Self-assessment is an important part of the processes involved. Field-test experience has shown that, given the opportunity, the individual student can make the most objective appraisal of the learning experience. As a means to this end, students can be provided with a checklist, based on the module's goals and objectives, that they can use to judge themselves. Such a checklist can include questions such as, "Did I plan effectively?", "How well did I use my time?", "Did I complete the investigation as I had planned, or if not, why not?", "Was the investigation reported to the audience that I had chosen?".

TIME REQUIREMENTS

Investigating Your Environment requires a minimum of 6 to 9 weeks, assuming class sessions of 45 minutes to 1 hour. The course has also been used successfully for a full semester.

IMPLEMENTATION PROCEDURES

No special training is required for a secondary school or college instructor educated in science or social science to implement the program. One teacher or a team of teachers can manage a full class load using the program. Although no additional academic preparation is necessary, the teacher or instructor must be comfortable with an open, value-free atmosphere in which lecture is abandoned in favor of problem-solving interaction with individuals or small groups of students.

Personnel Required for Product Adoption and Implementation

One instructor can handle many students. Cooperation of school administrators, secretaries, librarians, counselors, and faculty helps facilitate student investigations.

ASSURANCES AND CLAIMS

Assurances

The materials display no form of sexual, social, or ethnic bias. Field testing in a variety of classrooms, including racially and economically mixed, gave no evidence of any real or perceived prejudice. In field testing and in subsequent use, no case of harm, either physical or psychological, has been reported. The program is transportable and replicable. It has been used successfully in numerous classes without developer involvement.

Claims

The program is interesting and appealing to large numbers of students. Depending on the class, from 67 to 95 percent of the students indicate that they would prefer to continue the program rather than return to "regular" class activities. Students have demonstrated the ability to collect existing data related to their problem from a variety of sources, including publications, agencies, and organizations. New data are also collected in most investigations, using techniques such as interviews; questionnaires; and measurements of air quality, water quality, noise levels, and soil composition. In field-test classrooms, 32 percent of the students collected, analyzed, and summarized opinions or information instead of quantitative data. Of those collecting quantitative data, 62 percent manipulated the data into some new, more meaningful form. In the opinion of teachers and developers, 88 percent of the investigations were judged as successful.

Investigating Your Environment was designed in accordance with sound educational and scientific knowledge and practice. The materials were revised four times prior to commercial release. The revisions were based on content reviews, student and teacher feedback, and changes in knowledge and technology. For a list of the many professionals who contributed to the development of the materials, see the teacher's handbook.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Student's handbook	1 per student	3.99	Reusable	
Teacher's handbook	1 per instructor	3.99	Reusable	
Test kits and apparatus	1 per classroom	169.30	Contain some consumables, some reusables	Hach Chemical Co., Ames, Iowa 50010; Millipore Corp., Bedford, Mass. 01730; Mountain Industries, Boulder, Colo.
Investigating Your Environment (resource papers)	1 per classroom	To be announced	Reusable	
Miscellaneous supplies and equipment	As needed	Free; also usually available in classroom or home	Reusable	
Miscellaneous resource books	As needed	Free or moderate	Reusable

LANGUAGE AND THINKING PROGRAM (LAT), LEVEL 1

A program to develop skills that promote intellectual development and reasoning ability in preschoolers and first graders

Language and Thinking is an instructional program that consists of a series of 10 packages to develop skills that promote intellectual development and reasoning ability. The series provides instructional activities for preschool through 1st grade.

The packages provide a sequential instructional system with specific behavioral objectives for each of the packages. The specific objectives for each of the packages are divided according to the package title or attribute. Briefly, the LAT, Level 1 packages are:

1. Let's Start—An introductory package that explains the mode of presentation, suggests grouping procedures, and recommends bases for the selection of activities for the teacher.
2. Colors—Presents discrimination and identification, comparative and combinational activities; introduces simple question asking and functional operations that are associated with the colors of objects found in the child's environment.
3. Shapes—Extends the learnings and activities of Colors to include work with shapes.
4. Sizes—Builds on Colors and Shapes to provide experiences with relative sizes of objects.
5. Directions—Provides activities for introducing the locations of objects, animals, people, and services related to home, school, and community. Following and giving directions are also included in this package.
6. Blends—Combines Colors, Shapes, Sizes, and Directions activities for review or as an entry point for some children who may have acquired the knowledge and skills presented in the preceding packages.
7. Action—Pantomime and role-playing activities provide a base for the discussion and use of verb forms with appropriate pronouns to describe actions familiar to children.
8. Functions—Presents identification and discrimination tasks related to the use, materials, and parts of familiar objects in the child's environment. Many of the experiences provided involve visual, auditory, olfactory, and tactile sensory discriminations.
9. Classification—This package presents instruction on the various ways that elements in the environment can be ordered, classified, and reclassified.
10. Relevant Learning Experiences—Provides a series of activities selected by the teacher either to accompany instruction presented within the other packages or as culminating and enrichment experiences. The Alphabet House, a unique and motivating approach for introducing letter names; Creative Writing, which provides activities for developing creative writing interest and skills; The World Around Us, an accompanying field trip guide; and Game Activities are included here.

Throughout the packages, the primary emphasis is placed on the acquisition of skills and concepts. This cannot be accomplished without giving attention to the language used in association with this instruction. The teacher is encouraged to be more concerned about the content of the child's responses rather than the structural form of those responses.

The program is designed to encourage the teacher's involvement and interpretation. Guidelines for teachers are specific, but there are alternatives available which allow for teacher selection of activities and materials.

The use of a variety of specific objects to illustrate concepts has high priority in the *Language and Thinking Program* packages. The packages include a wide variety of manipulatives, picture cards, transparencies, activity books, and audiotapes. It was felt that a variety of presentation modes would heighten the level of interest and attention for both children and teachers during the lessons.

Sample Lesson

(Addressed to Teachers)

Classifications Package (LAT, Level 1)

Lesson 7

Instructional Objectives

9. The child can identify an object from a definition that includes its function, parts, the materials it can be made of, and the class to which it belongs. 10. The child can ask questions about categories of objects to find out the name of an object that is not visible. 11. The child can use information about the name, color, shape, size, location (where applicable), function, parts, materials, and class to describe objects with prompts from the teacher; for example, "Tell me all of the things about this (object) that you can think of."

Procedures

1. Select objects (or pictures of objects) that display a wide variety of attributes and features and encourage the children to generate complete descriptions. Show an object and ask the children to give: Its name; its class; a definition of the class; its color, shape, and size (compared to other objects in class or relative to another object that has been described; for example, "It is smaller than a ...."); its use (definition of class is often the same); its location (if common to the class or appropriate); material; and parts (if appropriate).

It is unlikely that one child will be able to describe all of these features, but by asking questions and allowing several children to contribute to a description, you will be able to emphasize the presentation of complete descriptions.

2. Several objects or groups of objects should be used to conduct this activity, but avoid making the task laborious. The children should be praised for all of the knowledge they have acquired; for example, "My, you are really smart. You know so many things that you can tell about these things. Can we think of something else that we know about this?"

3. You may wish to make a chart or list of the features described. Examples are as follow:

NAME: cup
CLASS: dishes
DEFINITION: things to eat or drink from
COLOR: white
SHAPE: circular (round)
USE: for drinking things
LOCATION: usually a kitchen or dining room
MATERIAL: china
PARTS: bowl and handle

You may refer to the chart of features as the children tell all they can about an object and remind them that "We haven't talked about how we use this," or "We haven't told what shape it is," and so on.

4. You may disperse these description tasks among other activities presented from this package to increase the likelihood that children will enjoy them.

SUBJECT AREA(S)

Language arts, prereading, cognitive skills, social studies, selected mathematics content, and science are areas from which content has been drawn. Visual and auditory discrimination, verbal response skills, categorization, association, sequencing, and critical thinking skills receive major emphasis.

INTENDED USERS AND BENEFICIARIES

The program has been formally tested with children ages 3 to 7. Suggested guidelines are provided for the teacher to select instructional content for each age group. The program is broad enough to permit differential sequencing, pacing, and classroom application with a wide variety of youngsters—children who speak a language other than English, urban and rural children, children who have difficulty learning, and privileged as well as underprivileged children.

The program was field tested with about 5,000 children in various locations and in a variety of socioeconomic settings. An additional 22,800 children are using the materials this year as a result of commercial distribution by the Follett Publishing Company. Since the packages can be used over and over and even shifted to other classrooms, this figure probably is low.

GOAL(S) OR PURPOSE(S)

The general goals of the program are to develop visual and auditory discrimination, the child's use of basic language, verbal fluency, increase vocabulary size, ordering, association, classification skills, sequencing skills; and to provide practice in critical thinking, drawing relationships, making inferences, making predictions, analyzing problem situations, synthesizing ideas, recognizing incongruities and analogies, making hypotheses, and evaluating situation events and actions. These goals are explicated by 127 instructional objectives across the 10 packages.

PATTERNS OF USE

Each of the 10 packages is a self-contained unit of instruction with activities that are sequential and cumulative. The packages are also planned to provide a sequential and cumulative instructional approach as a complete program. It is possible to select and use any one of the individual packages as a stand-alone segment of instruction, and individual packages may be purchased from the publisher for this purpose. This approach is not recommended by the developer, however, if maximum benefits are to be accrued from the program. Mastery learning criterion measures are available, separately, to assess student's entry skills and for package placement. The program has served as the core curriculum and as a supplement to other early learning programs.

The most commonly adopted use pattern is the installation of the first five packages in kindergarten classes and the second five packages in the 1st grade.

LAT has been used successfully in self-contained, open-individualized, and team teaching arrangements. Small-group instruction is recommended. The patterns may be flexible and adapted to individual school needs.

ASSESSMENT PROVISIONS

Several approaches are incorporated for frequent assessment of pupil progress. Guidelines are included in the teacher's guidebooks, which accompany each package, for use of teacher judgment of such areas as language acquisition skills. Student activity sheets are used for assessment of some skills related to small segments of instruction. Practice tests, which are built into the program, assess a small series of instructional outcomes on a frequency of every six or seven lessons of instruction. Available separately are language and thinking mastery learning criterion tests that may be used as pretest and posttest measures for placement and assessment of student outcomes.

TIME REQUIREMENTS

Thirty minutes of instruction daily is recommended if the objectives are to be met in a single year. If the packages are installed for use over a 2-year period with the same children in kindergarten and 1st grade, shorter periods may be used.

IMPLEMENTATION PROCEDURES

Each teacher's guide contains introductory information, the instructional objectives for the package, a list of the materials provided, and suggested lesson-by-lesson presentations. The lessons are not planned to be presented from start to finish during a single instructional session. Instead, the lessons are planned to develop a series of activities for a topic; for example, "Matching and Sorting "Colors" is the title of lesson 1 in the *Colors* teacher's guide. Objectives for each lesson are often repeated for a number of lessons. This recycling of tasks and activities is intended to provide overlapping—repetition without repeating the same task.

The program can be implemented by one teacher; however, a teacher with a teaching assistant or a team of teachers may use the series of packages. The packages are available separately for training and implementation guidelines. Evidence from classroom trials of the program indicates that student progress in achievement is partially a function of teacher consistency, regularity of presentation, and implementation in accordance with the suggested procedural guidelines.

Personnel Required for Product Adoption and Implementation

The program can be implemented by one individual, a classroom teacher, or a trained teaching assistant or a teacher's aide. Workshops are offered by the publisher, and consultation is available from the publisher or CEMREL, Inc. Costs for these services can be obtained from each organization.

ASSURANCES AND CLAIMS

Assurances

There is no evidence of harm associated with the use of this product. No adverse effects of any kind were reported by teachers in any of the locations where prepublication versions of the program were used. In three large cities where experimental versions of the materials and procedures were used, the majority of teachers who used the program said that they liked all or part of the materials, believed that students substantially benefitted from the program, and would recommend the packages to other teachers.

The presence of sexism, racial bias, or cultural stereotyping was not mentioned by teachers using the materials. Before publication, the guides and illustrations were examined and edited by program developers and publishing personnel to assure sexual and racial representativeness.

The program can be implemented without assistance from the developer or the publisher using the instructions provided in the teacher's guide and those supplied in a separate teacher orientation package. In an earlier pilot test, informal feedback from a number of teachers who used the program without assistance indicated that they could and wanted to use the materials with their classes.

Claims

The prototype materials for the level 1 program were developed by a team of practicing kindergarten and 1st-grade teachers. The materials and instructional procedures used to develop the skills and concepts included in the program reflect their concerns over compatability of objectives with classroom practice.

These materials were refined and developed still further over a period of 4 years of classroom trials. Throughout this period, the content, scope, and implementation methods of the developing program were reviewed annually by a national advisory committee of subject matter specialists and instructional consultants. Similarly, the assessment activities associated with the program were periodically examined by a separate national advisory committee for evaluation.

Several studies were done to examine child outcomes associated with use of the program. In a prepublication version of the program, children who received either the full set of LAT materials and objectives or just the program objectives without accompanying materials, placed higher in reading readiness more often than children who had not used the program. Apparently the materials and objectives provide good preparation for later school work where reading will be required.

Another study conducted under the auspices of a State department of education compared classes using the LAT materials and a prereading program with classes using a traditional kindergarten program. Here, classes using the LAT and allied materials had fewer children for whom failure in reading was predicted.

A prepublication study was done comparing classes whose teachers were given all of the LAT package objectives and materials with classes whose teachers were given only a list of instructional objectives without accompanying materials. In terms of student mastery, there were no important differences between these two groups.

The program offers teachers a set of instructional guidelines. These guidelines provide specific suggestions for using the materials. On a set of assessment measures which accompany the program, there was a definite relationship between children's mastery of program objectives and the degree to which teachers carried out the program as suggested.

LANGUAGE AND THINKING PROGRAM (LAT), LEVEL 1, TEACHER ORIENTATION PACKAGE

A multimedia instructional program for teaching essential comprehension and reasoning skills to students in grades 2-6

This package is used to provide orientation for teachers of the content, skills, and approaches of the Language and Thinking, Level 1 (LAT-1) instructional program. The package consists of a coordinator's manual, three filmstrips, and three accompanying cassette tapes. The coordinator's manual provides an overview of the content of all 10 of the instructional packages and suggested guidelines for implementing a series of 3 orientation workshops for teachers. These guidelines include suggestions for participatory activities for teachers who will be using the instructional program. Demonstrations of instruction with students in classroom settings are provided on the filmstrips and narrated on the cassette tapes.

The emphasis of the package is upon the sequential design and structure of the program and the opportunity for teacher flexibility within this structure. Emphasis is also placed upon the importance of teachers implementing the instructional program in a positive emotional climate. The audiovisual demonstrations provide clear examples that the LAT-1 program accepts the language of the child, provides alternative models, reinforces unique responses, and provides opportunities for students to expand their language usage.

SUBJECT AREA(S)

Language arts, cognitive skills development, prereading, social studies, mathematics, and science are subject areas included. Emphasis is placed on teacher training associated with content in these areas.

INTENDED USERS AND BENEFICIARIES

Classroom teachers and teaching assistants who work with children ages 3-7 using the LAT-1 program are the intended users.

Other possible users are curriculum specialists, master teachers, principals, or teachers serving as instructional coordinators.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To provide teachers with a general introduction to the *Language and Thinking, Level 1 Program*; (2) to provide teacher leaders (coordinators, curriculum specialists, principals) with appropriate guidelines for conducting teacher-orientation workshops concerning the use of the LAT-1 program; and (3) to provide parents of children using LAT-1 program with an introduction to the scope and content of the program.

PATTERNS OF USE

For school districts that provide inservice activities before or during the first week of the school year, the workshops using the *Language and Thinking Program, Level 1 Teacher Orientation Package* can be conducted at that time. Where inservice training is not scheduled at that time, the series of workshops may be conducted at any time throughout the school year.

The developers recommend that a series of three workshops be presented, with the first one occurring prior to instruction of the materials; the second, when teachers are completing the sizes package of LAT-1; and the third, when teachers are completing the blends package. A teacher, on an individual basis, may also use the package for self-orientation.

ASSESSMENT PROVISIONS

Sample workshop and package questionnaire are included in the appendix of the LAT-1 teacher orientation coordinator's manual for the purpose of collecting feedback from workshop participants.

Personnel Required for Product Adoption and Implementation

A classroom teacher, curriculum specialist, or principal designated as a coordinator can implement the guidelines of the orientation package.

A classroom teacher may use the package independently for self-orientation.

ASSURANCES AND CLAIMS

Assurances

The teacher orientation package is for teachers' private use or for workshop meetings conducted for teachers or parents. No reports of harm associated with this product have been received.

Presence of sexism, racial bias, or cultural stereotyping was not mentioned by users. In the coordinator's manual, neither teachers nor children are referred to with the generic "he" or "she." The accompanying filmstrips portray teachers as being young and old, white and black, male and females. Similarly, children of different races and backgrounds are shown together in classes using the LAT materials.

There have been no reports either to the developer or to the publisher that the package cannot be used by curriculum specialists or by individual teachers without developer assistance.

Claims

Information about effectiveness of the training packages has been collected informally in a number of locations across the country. An overwhelming number of teachers who participated in workshops using the package thought that their use of the LAT materials would be improved.

There is no evidence to claim that use of this product affects either student outcomes or program implementation.

LANGUAGE AND THINKING PROGRAM (LAT), LEVEL 1, MASTERY LEARNING CRITERION TESTS

A series of tests to evaluate student achievement on content of the LAT-1 instructional program

The *Language and Thinking, Level 1, Mastery Learning Criterion Tests* is a series of criterion-referenced tests to assess student achievement of the content of the LAT-1 instructional program. The tests are: (1) Colors-shapes-sizes, which combines items for content of these three related instructional packages; (2) directions; (3) blends; (4) action; (5) functions; (6) classification; and (7) a practice test to provide initial practice with essential test-taking skills.

The test series is designed to be group administered by a teacher as soon as possible after instruction in a package is completed. An accompanying administration manual provides the necessary information for giving, scoring, and interpreting test scores. A scoresheet on the back of each test identifies the objectives tested by each of the items and indicates whether a child has achieved mastery on that objective. While performance on no fewer than three items is used to infer mastery, teachers are urged to rely on their judgment in cases where a child displays mastery of an objective in classroom exercises, but not in test performance.

SUBJECT AREA(S)

Tests and Measurements: Criterion-Referenced Testing.

Language arts, prereading, cognitive skills, social studies, mathematics, and science are areas from which content has been drawn. Visual and auditory discrimination, verbal response skills, categorization, association, sequencing, and critical thinking skills receive major emphasis.

INTENDED USERS AND BENEFICIARIES

Kindergarten and 1st-grade children, ages 5 to 7. Although the LAT, level 1, instructional program may be used with younger children, ages 3 to 4, the developers do not recommend use of the paper-and-pencil group tests with children this young.

The tests may be administered to children who speak a language other than English, urban and rural children, children who have difficulty learning, and privileged and unprivileged children.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To assess the objectives of the LAT-1 instructional program that are testable with a paper-and-pencil testing format, and (2) to assess other early learning programs on the basis of the similarity of instructional objectives to the objectives of the LAT, level 1, program.

PATTERNS OF USE

The major use of the tests is to provide teachers with an objective means for inferring student mastery of instructional objectives. The practice test is administered prior to use of other tests to determine student test-readiness skills. Information derived from the tests can also be used in association with the LAT-1 recordkeeping chart printed in each of the teacher's guides.

ASSESSMENT PROVISIONS

Students take the practice test before beginning the instructional program to acquaint them with test-taking procedures. The other tests are administered after completing each of the instructional packages.

TIME REQUIREMENTS

Each test takes approximately 1 hour to administer.

IMPLEMENTATION PROCEDURES

Implementation guidelines are clearly stated in each of the *LAT-1 Mastery Learning Test Manuals for Administration*. The developers recommend that these be reviewed and followed carefully.

Summary Cost Information

Although cost depends upon the LAT program plan selected and the number of students per classroom, the chart shows the cost of the most frequently used plans for test purchases.

The figures shown are all based on tests being used with 60 students—2 kindergarten or prekindergarten classes; two 1st-grade classes, or a combination of these.

Mastery tests per pupil cost: These costs are for the current final experimental version of the mastery tests. It is expected that the final published version of the tests will be less expensive. Further information concerning these changes is available from the publisher. Set 1 is a set of tests to accompany colors, shapes, sizes, directions, and blends packages and include cost of the practice test. Set 2 is a set of tests to accompany action, functions, and classification packages and includes cost of the practice test.

Personnel Required for Product Adoption and Implementation

The tests can be administered by one individual, a classroom teacher, or a trained teaching assistant or aide. Any combination of the above working together can also administer them.

ASSURANCES AND CLAIMS

Assurances

No reports have been received of harm associated with the use of the criterion tests. When interviewed, a number of teachers reported that the testing was beneficial to the children because they learned to listen and to follow directions. In addition, the testing experience acquired by the student made the administration of other school tests easier for the teacher.

Presence of sexism, racial bias, or cultural stereotyping was not mentioned by teachers using the tests. In the final version of the tests submitted to the publisher, all generic masculine referents in the administrator's manuals were changed to more neutral phrase such as "the child."

The criterion tests are designed to be used by the teacher without need of training or use of external scoring services. The administrator's manual includes all directions, scoring procedures, and interpretive information needed to use the tests.

Claims

Each of the six mastery learning criterion tests is based on the instructional objectives of the *Language and Thinking Level 1 Program*, that is, all items included in the tests are designed to test a child's understanding of one or more skills stressed during instruction. Teachers can use the tests to assist them in deciding whether a child needs additional instruction and, if so, specifically what that instruction should emphasize. Together, the use of the items keyed to learning outcomes and the pinpointing of skills still unlearned are important claims for the usefulness of this product.

In addition to the six tests assessing program content, there is a seventh called the Practice Test. This test has been included to familiarize children with the item format and directions used in the test series itself.

All of the tests have been revised at least once. Faulty items were removed; and in response to teachers' requests and publishing considerations, all of the tests were shortened. Reliability has been established for each of the subtests in the test series. Item correlations between the subtest of some of the criterion tests indicate good relationships between the various subtests within each test and between the subtests and the total score. Moderate correlations exist between the criterion tests and two other widely used preschool measures—the Metropolitan Readiness Tests and the Boehm Test of Basic Concepts.

Perhaps the best indication of the validity of the criterion tests is their sensitivity to variations in teacher use of the suggested procedures and materials in the Language and Thinking Level 1 Program. Mastery scores attained by children varied directly with how fully a teacher implemented the program. In a pilot study, children taught by teachers who implemented the program most fully scored highest on all five of the criterion tests used.

LANGUAGE AND THINKING PROGRAM (LAT), LEVEL 2

A program to develop critical listening skills for children in grades 2-6

Language and Thinking (LAT), Level 2, is an instructional program for teaching essential comprehension and reasoning skills, including listening, reasoning, reading, and writing skills, to students in grades 2 through 6. The series of activity packages constitutes the program and provides a multimedia approach to learning component skills that are required for comprehension and reasoning in both written and oral forms.

The *Language and Thinking (LAT), Level 2*, packages provide instruction for a range of learning levels and abilities. There are now four packages in the series, A through D, representing a sequence of eight skill areas that increase in difficulty.

1. The activities in the first unit provide an introduction to aural comprehension and reasoning. This unit is provided to increase the students' awareness of listening as an important process and to develop better listening habits as they perform tasks similar to those that are incorporated in later units.

2. Skills included in the second unit assist students with sentence and paragraph organization, identification of main ideas and topic sentences, the selection of relevant details and, ultimately, outlining pertinent details as an aid to studying at higher levels.

3. The introductory activities of this unit, "Using Word Relationships," review basic classification skills and labeling of classes with concept names. These activities provide students with practice in organizing similar and/or dissimilar material into rational or logical groups, manipulation of objects and events based on multidimensional attributes, and understanding the verbal descriptions related to classes, subclasses, and class members.

4. There is, by necessity, the use of instructions throughout the series of packages; the fourth unit provides activities that concentrate on the processes involved in followi[illegible]nd giving directions. Practice is provided for analyzing instructions. Key words that [illegible] interpreting instructions are isolated, analyzed, and then used in context with ap[illegible] tasks. Students receive practice in following oral directions, examining their reactions and responses, and making appropriate corrections. The students also construct instructions for others to perform to help them become more aware of the necessity for the use of precise language.

5. The activities of the fifth unit involve two related skills areas that contribute to improved comprehension of oral and written content: (1) identifying and locating specific details and (2) recognizing and identifying the central theme or main idea of a communication. In the first area, students are asked to identify descriptive characteristics of concrete objects and details in pictures. In the second, students receive practice in locating main ideas and selecting statements that support the primary topic.

6. Most of the prior units of work concentrate on prerequisite skills to higher order reasoning and literal comprehension. The activities of this unit provide practice in understanding implied meanings not given directly in the oral and written selections. Recognition of alternative responses and more divergent thinking experiences are incorporated in activities in this unit of work.

7. The ability to form mental pictures as oral and written content is presented. Aiding children in visualizing characters, settings, and events is the focus of this unit. Students are provided with opportunities to identify emotional states from pictures and descriptions, to interpret feelings from speech and body movements, and to generate ideas related to characters, settings, and actions.

8. The content of the final unit presents a series of skills that assist students with evaluating oral and written content using specific criteria. Students learn to examine and distinguish fact and fantasy, synthesize information to predict outcomes, recognize cause-and-effect relationships, identify overstatement and unfounded claims, and select alternative courses of action as solutions to the problems presented. Activities are also provided which require students to generate their own ideas and elaborate on subjects.

RD 040 006

SUBJECT AREA(S)

Language arts, including skills for listening, reading, reasoning, and writing; social studies, science, and selected mathematics content are subject areas included. Emphasis is placed upon comprehension of content in these areas.

INTENDED USERS AND BENEFICIARIES

Although designed primarily for students of all abilities in grades 2-6, the product is currently being tested in grade 7.

GOAL(S) OR PUPOSE(S)

The goals of LAT-2 are: (1) To develop critical listening skills; (2) to develop skills related to literal and inferential comprehension of written materials; and (3) to provide practice in using critical thinking skills—drawing relationships, making inferences, making predictions, analyzing problem situations, synthesizing ideas, recognizing incongruities and analogies, making hypotheses, and evaluating situations, events, and actions.

PATTERNS OF USE

Language and Thinking Program, Level 2 A-D packages have four achievement levels for each of the eight skills areas. They are planned to be sequential and cumulative and to increase in difficulty from package A to D.

This sequential arrangement allows for the appropriate match of student skills and learning objectives both across and within classrooms. For example, a 2d-grade teacher may elect package B for most students, but also make use of packages A and C for some. Or a teacher may find package B appropriate in one of the eight skills areas, but package C more appropriate in another.

ASSESSMENT PROVISIONS

Students take an initial placement test to determine the appropriate starting point within the A-D package series, regardless of their grade placement. End-of-unit, mastery learning criterion tests, with guidelines for determining need for review or additional practice, are included with the packaged materials. More frequent assessment of student progress using student activity sheets is recommended to the teacher.

TIME REQUIREMENTS

Each of the LAT-2 packages is intended to be used approximately 30 minutes daily for 1 year. Four to five weeks is recommended for each unit of instruction.

IMPLEMENTATION PROCEDURES

Each package provides instructional activities which are introduced initially by the teacher. There are independent student activities; but the teacher is involved as a facilitator for discussions, makes use of appropriate question-asking strategies, and monitors student progress. The packages are planned to combine independent student activity with teacher guidance and assistance.

The guidelines for instruction, practice, and assessment are clearly stated in the teachers' guidebooks. Copies of all student activity sheets and printed transparencies are also included in guides. This approach is intended to assist teachers with management of the instruction and with selection of student activity sheets. Regular classroom teachers assigned to grades 2-6 can implement the program. The LAT-2 *Teacher Orientation Package* is available separately for use by teachers, school principals, coordinators, or curriculum specialists.

Summary Cost Information

Materials in the *Language and Thinking Program, Level 2*, are still in the prototype stage; therefore, no prices have been determined.

ASSURANCES AND CLAIMS

Assurances

There is no evidence of harm associated with the use of this product. After using a prototype of the Level 2 program, two-thirds of the children participating indicated that they would like to use similar materials again.

Presence of sexism, racial bias, or cultural stereotyping was not mentioned by teachers using the materials. In developing stories and illustrations for inclusion in the experimental version now in use, writers were careful to portray both males and females in a variety of roles. For example, boys are portrayed washing clothes and jumping rope, while a girl is shown fixing a bicycle. In a picture of a football huddle, the players could be either male or female and the directions refer to "his/her."

While the program is not yet ready for dissemination, the plans are to have the complete program stand alone, without assistance from the developer beyond the instructions provided in the teacher's guides and those supplied in the separate *Teacher Orientation Package*.

Claims

An experimental version of the *Language and Thinking Program, Level 2*, is currently being used in a number of urban and suburban schools. The version now being used represents a major restructuring of the prototype materials.

Responding to comments made by teachers, students, and classroom observers, more visual and tactile materials were included in packages designed for lower grades; and more varied stories and activities were added to packages used in upper elementary grades.

All of the teachers who used the prototype materials felt that there was a need for the content of the packages at the grade levels they were teaching. In addition, almost all of the teachers asked whether they could use the materials next year.

Based on recommendations from observers and teachers, the *Language and Thinking Program, Level 2*, is in continuing revision. Still to be added to the instructional package are placement and mastery measures. No quantitative data exist concerning either teacher implementation or student outcomes of the current version of the program.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Classroom set 8 sets of student activity sheets on ditto masters, 8 sets of criterion exercises on ditto masters, 13 sets of picture and word cards, and games	1 set per 30 students	Not determined	Student activity sheets on ditto masters consumable yearly	
Teacher materials: 2 teacher's guides, parts 1 and 2; 10 audiotapes; 1 set of classroom manipulatives, transparencies, transparency marker		Not determined

LANGUAGE AND THINKING PROGRAM (LAT), LEVEL 2, TEACHER ORIENTATION PACKAGE

A package to provide orientation for teachers to the LAT-2 instructional program

This package is used to provide teachers orientation to the content, skills, and approaches of the *Language and Thinking Program, Level 2* (LAT-2). The package consists of a coordinator's manual, three filmstrips, and three accompanying cassette tapes. The coordinator's manual provides an overview of the content of all four instructional packages and suggested guidelines for implementing a series of three orientation workshops for teachers. These guidelines include suggestions for participatory activities for teachers who will be using the instructional program. Demonstrations of instruction with students in classroom settings are provided on the filmstrips and narrated on the cassette tapes.

The emphasis of the package is placed on the sequential design and structure of the program and the opportunity for teacher flexibility within this structure. Emphasis is also placed upon the importance of teachers' implementing the instructional program in a positive emotional climate. The audiovisual demonstrations provide clear examples that the LAT-2 program works well with other instructional materials being used in associated subject areas.

SUBJECT AREA(S)

Language arts, including skills for listening, reading, reasoning, and writing; social studies; science; and selected mathematics content are the subject areas, with special emphasis on comprehension.

INTENDED USERS AND BENEFICIARIES

Classroom teachers of grades 206, curriculum specialists, master teachers, principals, or teachers serving as instructional coordinators are the intended users.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To provide teachers with a general introduction to the *Language and Thinking Program, Level 2, Teacher Orientation Package*; (LAT-2); (2) to give teacher leaders (coordinators, curriculum specialists, and principals) with appropriate guidelines for conducting teacher-orientation workshops concerning the use of LAT-2; and (3) to inform parents, whose children use LAT-2, of the scope and content of the program.

PATTERNS OF USE

LAT-2 workshops can be conducted by school districts that provide inservice activities before or during the first week of the school year. Whenever inservice training is not scheduled at that time, the workshop series may be conducted at any time throughout the school year.

The developers recommend that a series of three workshops be presented, the first one occurring prior to instruction of the materials. The second and third workshops can be planned on the basis of teacher progress and need during the eight instructional units.

ASSESSMENT PROVISIONS

Sample workshop and package questionnaires are included in the appendix of the coordinator's manual for the purpose of collecting feedback from workshop participants.

TIME REQUIREMENTS

Three 2-1/2-hour workshops are recommended.

IMPLEMENTATION PROCEDURES

Orientation procedures and implementation guidelines for conducting workshops are explicitly stated in the LAT-2 coordinator's manual.

Personnel Required for Product Adoption and Implementation

A classroom teacher, curriculum specialist, or principal designated as a coordinator can implement the guidelines of the orientation package.

A classroom teacher may use the package independently for self-orientation.

ASSURANCES AND CLAIMS

Assurances

Assurances of harmlessness cannot be given at this time since the product is still being developed. No trials of any kind have been made.

In the materials being developed, attention is given to avoiding sexism, racial bias, and cultural stereotyping. In the coordinator's manual, neither teachers nor children will be referred to with the generic "he" and "she." The accompanying filmstrips will feature teachers who are young and old, black and white, female and male. Similarly children of different races and backgrounds will be shown using the LAT materials all together.

This product is intended to be used by individual teachers, in workshops conducted by curriculum specialists, or by teachers without assistance from the developers.

Claims

Since this product is still being developed, there are no claims of effectiveness either in terms of product development or standard outcomes.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 040 008

MAKING JUDGMENTS

An instructional package that teaches students in grades 6-9 skills of critical thinking

Making Judgments is an instructional package that teaches students in grades 6 through 9 the skills of critical thinking. Its objective is to help students use concepts, rules, and strategies to make rational decisions about the reliability, relevancy, warranty, and sufficiency of information. Through use of the package, students should become more competent in their ability to solve problems and make decisions.

The package is divided into five independent courses varying in length from five to six lessons each. The first course, "Conflict," introduces specific principles for assessing argumentative assertions and value judgments. The second course, "Judging," deals with the principles for assessing evidence and testimony, (e.g., as in a court of law). "Reporting," the third course, covers standards for judging factual reports and interpretations. The fourth course, "Advertising," presents criteria for evaluating the meaning of persuasive appeals and the validity of empirical claims. Finally, the fifth course, "Causation," instructs students in the skills of generating and testing causal inferences and determining proof.

Each course has been designed: (1) To teach a set of evaluative skills; (2) to teach a strategy for evaluating a certain kind of communication, issue, or body of evidence; (3) to acquaint students with the responsibilities involved in a particular occupation or role; (4) to give students the opportunity to assume these responsibilities in a problem-solving or decisionmaking situation; (5) to give students practice in applying learned skills in a variety of content situations; and (6) to provide for practice of learned skills in a group situation. In general, each course begins by asking students to make simple discriminations and culminates in more sophisticated learner-directed problem-solving activities. Objectives are arranged to provide a cumulative learning experience within and across the lessons of each course.

Student materials consist of programed lesson books, workbooks, games, and objective-referenced tests. Student responses to lesson book questions are recorded in the workbook. Correct answers and feedback in the workbook are printed in invisible latent-image type. The ink is made visible when "developed" by a special felt-tip pen. There is also a teacher's guide that includes handouts and directions for group activities such as discussions, competitions, simulations, paper-and-pencil exercises, and role playing. Self-pacing lessons are designed to be worked on individually; games are small-group activities.

Lessons and activities for each course have been designed to fill a 45-minute class period, two or three times a week for 6 weeks. The courses may be used individually or in any sequence desired.

SUBJECT AREA(S)

Critical thinking.

Subject areas include: Distinguishing between statements and arguments about facts, tastes, and value judgments and settling each kind of argument; assessing the reliability of evidence and testimony; evaluating news reports and editorials and detecting techniques of slanting; identifying persuasive appeals and techniques and evaluating the warranty of claims; generating reasonable hypotheses, evaluating hypotheses against data, testing and revising hypotheses, inferring from data, and generating valid research designs.

INTENDED USERS AND BENEFICIARIES

The package has been developed for average or above-average students in grades 6 through 9.

GOAL(S) OR PURPOSE(S)

Students who master the concepts and rules presented in the package will have the intellectual tools necessary to make rational decisions and sound evaluative judgments in: (1) Resolving interpersonal conflict, (2) evaluating evidence and testimony, (3) interpreting facts and opinions, (4) evaluating persuasive techniques, and (5) testing hypotheses.

PATTERNS OF USE

Making Judgments provides for a mixture of individualized instruction and active group practice and discussion. Lessons are basically self-administering and self-paced. The package may be used as a two-semester program, or individual courses may be embedded in a social studies, reading, language arts, or science curriculum. Courses may be used in any sequence and their length varied by expanding or reducing the number of activities.

ASSESSMENT PROVISIONS

The package contains pretests that measure the student's critical thinking abilities before beginning work in a course and posttests that measure the student's competence after completion of a course. Both tests are objective referenced. Also, student journals contain short evaluative measures in the form of self-check quizzes and opinion surveys.

TIME REQUIREMENTS

The lessons and activities in each course have been designed to fill a 45-minute class period, two or three times a week for 6 weeks. Each course takes about 15 instructional sessions to complete.

IMPLEMENTATION PROCEDURES

Making Judgments can be used in any kind of school setting including open classroom, traditional classroom, and learning center. The package is completely self-contained and self-administering and requires no external assistance for successful implementation. No special teacher preparation is necessary beyond a basic familiarity with the package content.

ASSURANCES AND CLAIMS

During a 3-year testing period involving over 1,000 students, *Making Judgments* materials received no complaints of harmful effects from students, teachers, evaluators, or parents. The latent-image pens that come with the package are nontoxic, and the printed matter precludes risk of physical harm. No evidence or suggestion of psychological or sociological harm was found in the testing.

Particular effort has gone into developing an equalitarian version of the *Making Judgments* package. Stereotyped male/female roles have been avoided. There is a balanced mix of race, sex, and age in all problem-solving examples and their accompanying illustrations. Religious and socioeconomic references are absent from the package.

The *Making Judgments* package has undergone successful classroom use in various parts of the United States without the assistance or in-locus direction of the developers. The lessons themselves are self-administering, as are the games and the student journal puzzles and quizzes which also minimize teacher assistance.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

THE PERCEPTUAL SKILLS CURRICULUM

A set of four programs to teach preschool children basic skills before they enter formal instructional programs

The *Perceptual Skills Curriculum* comprises four instructional programs: *Visual-motor*, *Auditory-motor*, *General-motor*, and *Letters and Numerals*. Each of the four programs is designed to teach a specific set of skills—skills that characteristically emerge as children develop and that have been shown to facilitate primary grade achievement. The purpose of the curriculum is to insure, insofar as possible, that children acquire these basic abilities before they enter formal instructional programs in reading, spelling, and arithmetic.

The curriculum is the outcome of 5 years of empirical research that successfully addressed the following questions: (1) Which perceptual skills, if any, appear to be directly related to primary grade reading and arithmetic achievement? (2) Can these skills be taught in cases where development appears to be delayed? (3) When skills are taught, can the effects of that learning be observed in the child's reading and arithmetic achievement? In other words, can transfer be effected? (4) Given affirmative responses to all of the above, can perceptual skills be taught by teachers in public school classrooms—as a perceptual skills curriculum?

The four programs of the *Perceptual Skills Curriculum* are housed in a six-volume set. Each program consists of instructional goals that are defined as behavioral objectives. The objectives are organized into hierarchies of levels. A criterion-referenced test accompanies each objective, thereby enabling the teacher to assess the child's competency in a specific objective prior to moving to more difficult tasks. Suggested learning activities are provided which have been shown to be effective in teaching the various objectives for the four programs.

The *Visual-motor* program comprises 24 objectives, organized into 9 levels. The program is designed to teach children how to analyze spatial patterns into their component parts and, further, how to map the relationships among those parts. A variety of manipulatives are used to teach the basic skills. These include 1-inch cubes, pegboards, parquetry blocks, and geoboards, as well as bottle caps, paste sticks, and other objects of related size and shape. They may be procured from any source and are generally standard equipment in most elementary schools. Visual-motor skills have been shown to be directly related to arithmetic and reading comprehension.

The *Auditory-motor* program consists of 33 objectives organized into 8 levels. It teaches children how to analyze acoustical patterns—spoken words—into their component parts and map the relationship of those parts. Learning experiences involve a variety of word games wherein the children learn to segment words into syllables, as well as into smaller units of sounds known as phonemes. The pertinence of this is obvious: As the child gains the capacity to identify the phonemes in spoken language, coding those phonemes with letters—as in reading and spelling—makes sense. These skills have been shown to be directly related to learning to read.

The *General-motor* program consists of 24 objectives organized into 3 levels. These include gross-motor skills, such as hopping, balancing on one foot, and skipping; and fine-motor skills, such as eye-hand coordination. These skills are taught in the context of games and other physical activities which can range from relay races to loom weaving. In a general sense, this part of the curriculum is designed to teach the children how to analyze their own bodies into their various parts and coordinate those parts effectively.

The *Letters and Numerals* program consists of 52 objectives organized into 4 levels. It teaches specifically what its name indicates—the symbols of the classroom. A variety of workbook pages gives a structured set of experiences in discriminating and printing letters.

Children enter into each of the programs through placement test procedures. They are tested in each program to determine appropriate starting levels. They are then assigned lessons that will teach them the next objectives in the sequence of the programs. As the children progress, they display their achievements by passing curriculum tests, thereby signaling to the teacher a readiness for more difficult experiences.

SUBJECT AREA(S)

There are four subject areas in the *Perceptual Skills Curriculum*, each of which is taught by a specific program. The *Visual-motor* program teaches basic spatial analysis and organizational skills. The child is given experiences which require analysis of the construction of a concrete pattern or a drawn pattern. The *Auditory-motor* program teaches basic acoustical analysis and organizational skills. It highlights the analysis of spoken language rather than nonverbal sounds. In the *General-motor* program, children are taught various gross- and fine-motor abilities in the context of games and other physical activities. The *Letters and Numerals* program teaches children to discriminate, name, and print from dictation the capital and lowercase letters of the alphabet.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used developmentally; i.e., with all children from preschool through grade 2. It is also intended for use with children of any age who are experiencing a learning disability that is related to visual and/or auditory perceptual dysfunction.

GOAL(S) OR PURPOSE(S)

The child successfully completing the *Perceptual Skills Curriculum* will be able: (1) To analyze concrete spatial information into salient components and map the interrelationships of those components; (2) to identify the phonological components of spoken language that are to be coded with letters in reading and spelling; (3) to demonstrate satisfactory motor coordination, particularly in those activities which are pertinent in the school environment; and (4) to show complete familiarity with the letters and numerals.

PATTERNS OF USE

The four programs can be presented in any order; however, they are designed to be implemented simultaneously. Within each program, the objectives are organized into levels, and levels into units. These are to be presented as they are sequenced.

Implementation of the four programs can vary depending upon where the curriculum is used. In a traditional classroom, where a single teacher manages the entire situation, group instruction is called for and is possible. In an individualized classroom, where an aide is also present, individual instruction is the more common approach. Here, too, certain programs continue to be best implemented as group activities. This is particularly true of the *General-motor* program.

The following summary of the major stages of instruction in the *Auditory-motor* program conveys the richness of detail and the careful sequencing that are characteristic of all the components.

At the lower levels of the program, the children are taught to march and clap their hands in time with recorded marching music. Following this, they learn to clap their hands once for each word in a spoken phrase of single-syllable words. They are then taught to "read" the dashes in any requested order. At the next level, two- and three-syllable words are used; the claps, and eventually the dashes, are now used to indicate syllables—"parts" of words. Once the capacity to "read" any dash on request has been acquired, the concept of embedded sound is introduced, initially with the syllable—eventually the phoneme—serving as the unit of analysis. Ultimately, these procedures lead to teaching the child to analyze streams of meaningful spoken words into their component parts, and demonstrate this skill by deleting portions of the words (syllables initially; ultimately phonemes) and voicing the others.

ASSESSMENT PROVISIONS

Children are initially pretested for placement purposes; that is, to determine the level at which they should enter into each of the four programs. From this information, the teacher makes appropriate assignments for each child. Thus, each child in a classroom could perhaps be working on a different objective within each of the four programs. The children's progress is monitored as they work through the programs. This is accomplished by use of the criterion-referenced tests that accompany the objectives.

TIME REQUIREMENTS

The product is intended to be used approximately 1 hour daily during the entire kindergarten year. It is intended to be used 30 minutes from one to five times a week, during grades 1 and 2. Data indicate that children will progress in direct proportion to the amount of time they spend within each program. However, overexposure is not desirable in that these are skills that must be assimilated rather than facts to be memorized.

IMPLEMENTATION PROCEDURES

The six volumes which make up the *Perceptual Skills Curriculum* provide most of the materials necessary for implementing the program. The additional materials needed are normally found in elementary school buildings—that is, blocks, pegboards, geoboards, and/or other manipulatives. Teacher training is provided in the introductory guide; no additional training is normally needed. If the program is to be used in an individualized way, a classroom aide is needed. However, schools can implement the program with normal staffing.

ASSURANCES AND CLAIMS

Assurances

The *Perceptual Skills Curriculum* was used, during its development, with approximately 4,000 children in 7 school districts. There have been no instances reported where harm of any sort—physical and/or psychological—resulted from the program. The curriculum is asexual and contains nothing that could be construed as perpetuating racism or any other bias. The curriculum is highly transportable. To date, approximately 3,000 have been sold and are being used in all areas of the United States and several other countries.

Claims of Effectiveness

Evidence indicates that the *Perceptual Skills Curriculum* is effective in several areas: (1) Students trained using this curriculum show significantly greater improvement in perceptual skills as measured by repeated administrations of standardized perceptual aptitude tests (e.g., Rutgers Drawing Test) than do untrained children; and (2) training in auditory skills is positively related to reading achievement, and there are indications that a similar effect may be found in other areas, such as arithmetic and conceptual skills.

These findings are based on a number of studies conducted during the course of product development which sought first to identify which perceptual skills were related to classroom achievement and then to determine whether such skills could, in fact, be taught in the classroom.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
The Perceptual Skills Curriculum (6 volumes): *Introductory guide* (volume I) *Visual-motor skills* (volume II) *Auditory-motor skills* (volume III) *General-motor skills* (volume IV) *Introduction to letters and numerals* (volumes V and VI)	1 set per classroom	69.50	Reusable	

Note: This set contains all master copies of tests and forms; the master copies are duplicated by each teacher as needed. Manipulatives may be purchased separately or constructed at school.

New York, N.Y. 10019**

INFORMATION CURRENT AS OF MARCH 1975 ■

SWRL/GINN INSTRUCTIONAL CONCEPTS PROGRAM (ICP)

A program which provides resources for teaching children conceptual skills fundamental to academic achievement

The *SWRL/Ginn Instructional Concepts Program* (ICP) provides research-based, classroom-verified resources for teaching children conceptual skills fundamental to academic achievement. The performance-based program is generally used at the kindergarten level.

The program provides comprehensive materials and procedures that assist the teacher in promoting each child's understanding of such concepts as color, size, shape, amount, and position. Program resources include:

Story cards—Each lesson begins with a teacher-read story based on the adventures of recurring theme characters. Concepts taught in the lesson are repeated frequently in the story.

Story posters—Illustrations accompany each story. These large cardboard posters give the children an opportunity to see and respond to examples of the concepts.

Concept books—Children receive individual concept books for each unit in the program. Illustrations include the unit theme character and examples of the concepts.

Games—More than 35 games are suggested for use with the program. These games are designed to maximize children's participation in activities related to the concepts.

Flashcards—Additional examples of the concepts are provided by flashcards. Each of the 138 cards illustrates 2 or more concepts.

Concept cards—Each teacher receives 120 durable cardboard triangles, circles, squares, and rectangles in different sizes and colors.

Criterion exercises—A criterion exercise is provided for each unit to help the teacher assess children's attainment of unit skills and to identify children who need additional instruction.

Practice exercises—Two practice exercises accompany each of the seven units. These exercises, which may be used by a teacher, an aide, a parent, or a tutor, provide additional instruction on unit content.

Program resource kit—The resource kit organizes teaching procedures, story cards, flashcards, games, theme character cards, and criterion exercise directions.

Teacher's manual—The teacher's manual describes program materials, procedures, and instructional sequencing.

Procedure cards—These cards outline recommended procedures for daily instruction, practice exercises, and criterion exercises.

SUBJECT AREA(S)

The program promotes an understanding of concepts basic to success in school.

INTENDED USERS AND BENEFICIARIES

ICP was developed for use with all pupils who have not yet attained its specific learning outcomes. It has been used successfully with a wide range of pupils in prekindergarten, kindergarten, and 1st grade.

GOAL(S) OR PURPOSE(S)

Pupils participating in the program learn to identify and to name examples of 96 concept words. Concepts taught in the program are basic to classroom instruction, as indicated by an analysis of primary level curriculums. The concepts pertain to colors, sizes, shapes, amounts, positions, premathematics, and prereading.

PATTERNS OF USE

The program is organized into 58 lessons divided into 7 units. Each unit includes lessons that describe two to four concepts. Generally, one lesson is taught each day. A criterion exercise and supplementary practice follow the final instructional lesson of every unit.

A lesson may be completed within one continuous time block, or the various activities comprising the lesson may be conducted at different times during a given day.

ASSESSMENT PROVISIONS

Criterion exercises administered after each unit of instruction enable teachers to regularly determine pupil attainment of specific program skills. Practice exercises are provided for assisting those pupils whose scores indicate they might benefit from supplementary instruction on concepts taught in the program.

The instructional concepts program Quality Assurance (QA) system includes the resources to identify and report instructional accomplishments attained during program use. This information provides a basis for instructional planning by teachers and administrators. The system also provides a means by which the pupil proficiency attained with the program can be credited in a manner that is understandable by parents and others interested in the schools.

TIME REQUIREMENTS

Scheduling and length of individual lessons depend upon teacher determination of pupil learning needs and the amount of instructional time available. Generally, when one 20- to 30-minute lesson is conducted daily, pupils complete the program in less than 12 weeks of school.

IMPLEMENTATION PROCEDURES

The training and installation system includes the resources that enable a school district to install the program efficiently and effectively; for example, comprehensive materials and procedures are provided for training school supervisors to conduct program orientation sessions for teachers. A comprehensive and self-contained program used by supervisors in these training sessions is furnished. School-verified training materials and procedures enable district personnel to assume all responsibility for the teacher training required to begin using the program effectively, and to conduct this training within the time conventionally available to school personnel.

Also included in the installation system are materials and procedures for performing administrative functions related to the *SWRL/Ginn Instructional Concepts Program*. For example, there are suggestions for: Conducting briefing sessions for school boards, parents, and community members; ordering and distributing materials; scheduling the instructional program; conducting followup training sessions for teachers; monitoring the operation of the program during the school year; and integrating the program with the existing school curriculum.

ASSURANCES AND CLAIMS

Assurances

The materials and procedures comprising the product have been designed for convenient use by the teacher with no requirement for specialized personnel. During each of the 25 tryouts involving more than 14,800 classrooms and 443,000 pupils, emphasis was placed on refining the features that facilitate flexibility of use under different organizational schema. Tryout inquiry procedures have served to assure teacher acceptability and product transportability. They have also assured instructional utility with pupils representing the full range of ethnic and demographic characteristics.

The product does not appear to possess bias or imbalance in sexual stereotyping, cultural and racial diversity, dangerous substances, or religion.

Claims

Release of the product for commercial distribution requires demonstration that it has been used successfully to obtain prespecified program performance on each of the outcomes. The SWRL quality testing procedures for instructional products and the criteria against which the instructional product has been evaluated during development provide this evidence.

To provide a replicable means of insuring that the program continues to function reliably under natural school conditions, apart from SWRL, a set of procedures referred to as quality assurance has been developed. As the tryout monitoring procedures did for SWRL staff during product development, the QA resources provide regular periodic information on various indicators of instructional accomplishment and program status for each class, school, and district. Such information provides school agencies with quantitative data relevant to program effectiveness and enables them to communicate instructional successes attained through program use to school boards, funding agencies, and other interested groups. Also, individual pupil accomplishments are easily identified and available for sharing with parents. This information has proven especially useful in furthering parent/school communication and in fostering parental support.

LOGO TEACHING MANUAL

A self-instructional manual designed to enable students in grades 4-8 to learn computer language

The *LOGO Teaching Manual* is designed as a self-instructional manual for people learning the LOGO computer language. LOGO (developed at Bolt, Beranek, and Newman, Inc.) is a simple but powerful language that elementary school students (grades 4-8) can use successfully. The *LOGO Teaching Manual* is used in conjunction with a computer terminal that can access a version of the LOGO language. Students write programs that make LOGO do different tasks. Emphasis is given to problem-solving skills that are concretely illustrated by the task of programing a computer, including: Planning ahead, revising, extending, using feedback, reducing problems to simpler problems, and breaking problems into small steps.

The *LOGO Teaching Manual* is organized as a sequence of booklets, each of which teaches a new programing concept and provides numerous practice projects. Each booklet includes a review of prerequisites, and a final problem that can be used as a test. Each concept is taught in two separate booklets so that students normally have a choice of ways to learn the concept, and students who have difficulty with one presentation can try an alternative. The concepts taught are those of the LOGO program language, including procedures, subprocedures, recursion, inputs to procedures, and testing values for logical decisions.

SUBJECT AREA(S)

The *LOGO Teaching Manual* teaches general problem-solving skills such as stating the problem clearly, dividing a problem into parts, extending partial solutions, and using feedback.

It uses the computer language LOGO as the domain of interest and teaches the programing concepts of LOGO. The booklets that make up the manual include the following topics: Introduction, regular uses of print, fancy uses of print, procedures, changing procedure definitions, fancy designs, superprocedures, the alphabet project, recursive procedures, procedures with inputs, LOGO operators, procedures with changing inputs, MAKE, RANDOM, and REQUEST, number games and changing inputs, LOGO operators and testing, and number games and testing.

INTENDED USERS AND BENEFICIARIES

Students in grades 4 through 8 who are learning LOGO are the intended users. Older students learning LOGO as a first computer language would find the manual useful, but would not need to work on all the projects.

GOAL(S) OR PURPOSE(S)

The manual teaches students: (1) To use the LOGO language, (2) to formulate and solve problems of their own using LOGO, (3) to divide problems into subproblems, (4) to gather data and use feedback to solve problems, and (5) to enjoy using LOGO.

PATTERNS OF USE

Booklets must be used in prescribed order as indicated on the sequencing chart. Some booklets may be omitted if the concepts are mastered in other booklets. The final problem in each booklet must be completed before proceeding to the next booklet. The manual has been used in two 1/2-hour sessions per week for a school semester. More intensive use is possible, but less frequent use, especially for the early booklets would not be recommended.

ASSESSMENT PROVISIONS

Each booklet contains review problems that should be solved before proceeding to new material. If review problems prove difficult, remedial work is recommended. Each booklet also includes a final problem that should be completed before moving to a new booklet. In cases where the final problem proves difficult, an alternative booklet that covers the same material can often be selected.

TIME REQUIREMENTS

Fourth- and fifth-grade students can complete the manual in approximately 20 hours of study. Older students would probably progress more rapidly, especially if they knew how to type, a skill required for communicating with the computer. The individual sessions should last at least 1/2 hour.

IMPLEMENTATION PROCEDURES

In order to use the manual, the student must have access to a time-sharing computer that supports the LOGO computer language.

The teacher must be able to answer questions about LOGO, help students "debug" their work, and help with the mechanics of using a computer terminal. Teacher training would require 10 hours of work with LOGO, and can be provided almost entirely by the teacher using the manual as a student would.

ASSURANCES AND CLAIMS

The manual has not harmed any of the 30 students exposed to it. It contains no material likely to perpetuate sexual, racial, or ethnic biases. The *LOGO Teaching Manual* has never been used outside of the producer's direct control, so no assurance of replicability or transportability is possible at this time. The manual was used by one teacher who did not know LOGO before seeing the manual, and the teacher experienced no difficulty.

The manual has gone through four complete tryout-rewrite cycles in 4 years and represents the application of feedback from learners to each revision.

SERIES COMPUTER ASSISTED INSTRUCTION PROGRAM (SERIES)

A sequenced program to give students in grades 2-12 experience in solving problems

The *SERIES Computer Assisted Instruction Program* is designed to give students experience solving problems and to teach certain patterns for extending sequences. The range of problem difficulty spans grades 2 through 12. Thousands of unique problems, encompassing approximately 400 different principles, are available. Problems are sequenced into 50 levels of difficulty, each representing several principles.

The SERIES program provides the kind of responsive environment that is impossible without a computer, and represents a way in which computers can contribute to changing the content traditionally taught in the schools. The emphasis in the program is on problem solving and thinking skills such as stating the problem clearly, gathering data, using feedback, creating and testing hypotheses, and knowing when to stop working on a problem.

Every problem is based on a rule for extending a sequence of terms that the student must infer. To help infer the rule, the student can ask for more data or guess the next term. The program provides feedback on the guess, incorporating it into the sequence if it is correct. Self-testing and data collection continue until the student asks to change to a new puzzle. Between problems, the student is given performance feedback, is told the level of the last problem, and is asked to choose a new level for the next problem. Problems are provided until the student stops for the day.

The rules that form the basis for the problems include:

1. Repeat the same terms forever (6,1,6,1,6,1,6,1,6,1,...)
2. Increment the last term in some alphabet, usually the English letters or the integers (5,6,7,8,9,10,...) (A,C,E,G,I,...)
3. Place terms from two sequences next to each other (1A,2B,3C,4D,5E,6F,...)
4. Take every other term of the new sequence from two other sequences (6,1,6,2,6,3,6,4,...)
5. Those rules can be combined to produce complex sequences (1,1,6,2,3,4,8,5,5,10,10,11,7,22,12,23,9,46,...)

SUBJECT AREA(S)

This program teaches problem-solving skills such as stating problems, gathering data, using feedback, and testing hypotheses. The content includes rules and problems from mathematics and English.

INTENDED USERS AND BENEFICIARIES

Students in grades 2 through 12 will find problems of appropriate difficulty in the program.

GOAL(S) OR PURPOSE(S)

The SERIES program is intended to teach students: (1) To use feedback more effectively, (2) to test hypotheses, (3) to gather data when needed, (4) to improve skills at extending sequences, and (5) to enjoy solving problems.

PATTERNS OF USE

The program can be used without restriction. Students choose their own levels of difficulty within the program, and may enter at any time.

ASSESSMENT PROVISIONS

Placement within the program is unnecessary since students choose and adjust their own levels of difficulty continuously. Progress within the program is reported to the teacher and student after each session. A progress graph is printed, separating the most current work from the earlier work.

TIME REQUIREMENTS

No restrictions are placed on the amount of time that students work. It is recommended that students spend about 5 hours on the program during the course of a school semester, but considerably different patterns of use could be equally beneficial.

IMPLEMENTATION PROCEDURES

To use the program, the school must have access to a time-sharing computer system capable of running programs written in FORTRAN IV. The program requires a teletype or teletype-compatible cathode-ray tube (CRT), and is enhanced if run on a CRT capable of erasing selective lines and positioning the cursor, such as the DATAPOINT 3300. Approximately 3 months of expert programing would be required to adapt the program to other time-sharing systems.

Teacher orientation, available from the developer, requires approximately 2 hours. Each student needs 1/2 hour on the terminal to learn the necessary management skills for accessing the program and performance within the program. Students work individually on the program. Any school organization that allows students to work at their own pace, on different objectives within the same classroom, can support work on the program.

ASSURANCES AND CLAIMS

In 2 years of pilot testing in a single school, no reports of harm to any students were received. The SERIES program is asexual and contains no materials that could be construed as displaying racial or ethnic bias.

The program has never been used outside of the producer's direct control, so no assurance of replicability or transportability is possible at this time. At the field test site, the program operates with minimal producer intervention, so that it is likely that the program will operate successfully at other sites.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 040 013

DEVELOPMENT OF HIGHER LEVEL THINKING ABILITIES (HLTA)

An instructional system in which teachers learn strategies that increase students' abilities to solve problems

This low-cost, mass-diffusible, competency-based instructional system includes all materials and procedures for 36 hours of instruction. Organized into 28 instructional sequences, or units, it is conducted as an inservice workshop or preservice course. Teachers learn to use teaching strategies that increase the students' abilities to solve problems by categorizing facts, drawing generalizations from these facts, and applying them to unknown situations. As a result of teachers using these teaching strategies, students learn whys and hows, rather than memorize facts. They learn to use sound judgment and to solve problems creatively, as well as to assimilate large bodies of knowledge. Each of the teaching strategies is learned through a series of five steps: (1) The skill is introduced with the leader playing role of a classroom teacher and the teachers playing the role of students, (2) the theory of the skill is presented, (3) the skill is broken into its component parts and simulated in small groups, (4) the strategy is demonstrated with laboratory students, and (5) each teacher uses subject area skill with regular students.

SUBJECT AREA(S)

The subject area is developing higher level thinking abilities in students.

INTENDED USERS AND BENEFICIARIES

Classroom teachers and, indirectly, the students themselves are the intended users.

GOAL(S) OR PURPOSE(S)

The purpose of this instructional system is to prepare teachers to use teaching strategies which increase the abilities of students to solve problems by categorizing facts, drawing generalizations from these facts, and applying them to unknown situations.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes extensive participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

Participants in this system need to have a classroom population with whom they may practice the skills and for whom they can prepare their material. Self-evaluation is employed throughout the materials.

TIME REQUIREMENTS

This system is organized into 28 units consisting of 36 hours of instruction. It may be conducted either as a campus course or as a workshop.

IMPLEMENTATION PROCEDURES

Small groups of students are necessary for the practice sessions; regular classrooms can be used for the laboratory experience. Ideally, participants in the program should spend full time for 2 weeks. However, options include schedules for a methods or an extension course. Details are presented in the instructor's manual.

Personnel Required for Product Adoption and Implementation

One instructor is needed for each 24 participants. Ideally, 12 to 15 participants is considered the optimum size for small groups.

The prospective instructor needs to be familiar with the instructional program and must, on the first training occasion, have the onsite assistance of an experienced trainer.

There are no special administrative considerations. If the class is conducted during school hours, arrangements must be made both for classroom use and released time of participants.

Three participants and one instructor is the minimum needed for product tryout. For full impact, it is recommended that all staff members of a target unit participate in the program.

ASSURANCES AND CLAIMS

Assurances

During a series of trial workshops, participants were repeatedly asked for feedback concerning the system. While criticisms were used to revise the system, there were no reports from participants, trainers, or implementers indicating that physical, psychological, or sociological harm had been experienced.

Social fairness issues were considered during interim rounds of trial and revision, resulting in some early modifications of this system. While the generic "he" is sometimes used when referring to persons of either sex, the system is generally fair and has been positively accepted as such.

This system was designed with the intention that it be relatively easy to use by persons whose roles involved the training of teachers. Developers of the system have observed that teacher educators who were familiar with the content of the system have had experience as trainees in workshops using the system, have had a cotraining experience with someone familiar with the use of this system, and have been able to satisfactorily conduct it. An alternate version of the system was created by the developers based on an early assumption that the first version might be somewhat difficult to conduct. Subsequent observation at field test sites indicated that both versions were relatively easy to use, while data from participants indicated no difference in outcomes.

Claims

Field testing of the materials began in 1967 and was continued on each of the two versions in various settings in the Pacific Northwest until their completion in 1970. Data collected from volunteer trainees who attended field trial workshops indicate the following results:

1. Of 290 trainees, 75 percent reported satisfaction with the training.

2. On a locally produced, 12-item cognitive test, the mean scores from 37 trainees were comparable to mean scores from a group of advanced trainers (experts) in the field.

3. Audiotapes of classroom discussions collected from 28 teachers before and after training showed statistically significant change on 5 of 8 behaviors presented in the system.

This system was developed over a 4-year period involving repeated rounds of trial and revision with K-12 teachers. The evaluation included pilot trials, interim formative testing, and a summative field test.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Participant materials	1 for each participant	12.00		
Instructor's manual	1 for each trainer	17.25	Reusable	

A film on "dealing with feelings and contrasting cultures" is utilized in one unit. The instructor's manual recommends three specific possibilities (to be selected locally), or the instructor may have a suitable substitute available.

FACILITATING INQUIRY IN THE CLASSROOM

An instructional system which trains teachers in behaviors which encourage students to inquire and become autonomous learners

This low-cost, mass-diffusible, competency-based instruction system includes all materials and procedures for 40-45 hours of instruction as a campus course or inservice workshop. The instruction is organized into 18 instructional sequences or units. Each sequence provides: Notes to leaders; leader preparation; list of participant materials; step-by-step procedures including rationale, timing, schedule and leader input; and participant handouts. While progressing through the sequences for learning each teaching technique, the participant learns to identify the technique, practices it, and finally practices applying it to a subject area in the classroom.

Teachers who complete the training program learn to perform 27 specific behaviors that encourage pupils to inquire and become autonomous learners. In broad terms, they develop abilities: To identify, practice, and use certain interaction patterns that allow students to inquire, help students grow in ability to learn independently, and reveal student attitudes and perceptions of inquiry processes; to identify what students do when they inquire, how they grow as inquirers, and to diagnose and evaluate where individual students are on a continuum of inquirer growth; and to carry out and assess their own learning.

SUBJECT AREA(S)

This instructional program discusses inquiry development of students.

INTENDED USERS AND BENEFICIARIES

Classroom teachers and, indirectly, the students themselves are the intended users and beneficiaries.

GOAL(S) OR PURPOSE(S)

This instructional program is designed to assist teachers in developing and improving the following abilities: (1) To identify, practice, and gain skill in using 18 inquiry tactical moves which allow students to inquire, help students grow in their ability to learn independently, and reveal student attitudes and perceptions of inquiry processes; (2) to identify what students do when they inquire, how they grow as inquirers, and diagnose and evaluate where individual students are on a continuum of inquirer growth; and (3) to try out, practice, and gain skill in helping one another learn.

PATTERNS OF USE

These materials are sequentially organized toward the cumulative attainment of the stated objectives. The training design includes extensive participant interaction for feedback, simulation trials, and interdependent action. For this reason, all participants are required to commit themselves to full attendance at all workshop sessions.

ASSESSMENT PROVISIONS

Facilitating Inquiry in the Classroom has been deemed appropriate as an initial experience for classroom teachers and, therefore, has no prerequisites. Throughout the workshop, participants evaluate their learning by mutual feedback, self-testing (e.g., paper/pencil tests), and skill practice.

TIME REQUIREMENTS

The 18 instructional units are cumulative and intended for use in a 40- to 45-hour workshop or campus course.

IMPLEMENTATION PROCEDURES

As a minimum requirement, a leader needs to have completed the program as a participant. A qualified leader can conduct the program for a maximum of 24 participants.

ASSURANCES AND CLAIMS

Assurances of Harmlessness

During a series of trial workshops, participants were repeatedly asked for feedback concerning this system. While criticisms were used to revise the system, there were no reports from participants, trainers, or implementers indicating that physical, psychological, or sociological harm had been experienced. This system became commercially available more than 2 years ago. The developer has received no reports of harm or perceived risks during this time.

Assurances of Social Fairness

Social fairness issues were considered during interim rounds of trial and revision of this system. While the generic "he" is sometimes used when referring to persons of either sex, the system has been positively accepted as fair.

Assurances of Replicability

This system was designed for relatively easy use by those whose roles involve the training of teachers. Given familiarity with the content of the system, a trainee experience in going through the workshop, and a cotraining experience with a person familiar with the system, the developer has observed that teacher trainers have been able to use the system successfully.

Claims of Effectiveness

Field tests of the materials in this system were conducted between November 1969 and October 1970, with the field test population of 143 persons from 6 test sites—2 in Alaska, 2 in Oregon, 1 in Washington, and 1 in Montana.

Data collected during the field trials provided the following results:

1. Of the 143 trainees, 90 percent perceived the training to be satisfying and worthwhile.
2. Of the 143 trainees, 81 percent reported the strategy taught as being practical and useful.
3. Trainees showed statistically significant cognitive gains on a locally produced concept test administered before and after the training. This gain was found to exist 6 months after training.
4. Two audiotapes of classroom interaction—one collected before training and the second after training was completed—showed that trainees exhibited more inquiry behaviors in their verbal interaction after the training than before.

Claims of Careful Product Development

This system was developed over a 4-year period involving repeated rounds of trial and revision with teachers. Evaluation included pilot trials, interim formative testing, and a summative field test where developers were not involved.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 040 015

INSTRUCTIONAL STAFF DEVELOPMENT

A multimedia program to train teachers to exhibit behaviors which lead to inquiry-skill development in students

The *Instructional Staff Development* (ISD) program is designed to train teachers to exhibit behaviors which lead to inquiry skill development in students. The program is designed for 1 school year and includes 18 instructional sessions, lasting 2-1/2 to 3 hours, plus 15 practice sessions of about 1 hour each. The instructional materials are divided into six components which are to be implemented in sequential fashion. A trainer's manual for each component is the focal point for implementation activities. The manual provides step-by-step instructions for preparation, execution, and evaluation of the training activities.

The training package also includes 32 transparencies, handout materials for teacher use, 30 minutes of model video tapes, and 1 hour of practice audiotapes. The teachers are viewed as learners in this program, and spend most of their time planning and presenting lessons in a microteaching session and assessing results with the help of the trainer to determine whether the lesson was carried out according to plan. Other trainer's responsibilities include conducting preassessment/postassessment and initiating and maintaining discussion without judging rightness or wrongness to help teachers conduct an inquiry into their own inquiry teaching.

SUBJECT AREA(S)

Teacher education, biology, and social studies.

INTENDED USERS AND BENEFICIARIES

Intended users and beneficiaries are junior and senior high school teachers who work with a wide range of learning levels. Although the program has been designed and field tested with biology and social studies teachers, University of Nebraska personnel have reported successful use of the program with elementary teachers and teachers in mathematics, art, and English.

GOAL(S) OR PURPOSE(S)

The ISD program has been designed to help teachers: (1) To control and modify their instructional influence behaviors; (2) to use cognitive or structuring skills and affective behaviors conducive to inquiry to plan lessons, present them, and evaluate the results; (3) to develop a series of sequential lessons which incorporate content, process, and teaching strategies; and (4) to increase effectiveness in choosing strategies to best support students in a variety of learning situations.

PATTERNS OF USE

The instructional materials consist principally of six component trainer manuals in the following sequence: Component I—Inquiry Orientation, Component II—Inquiry Influence, Component III—Inquiry Skills, Component IV—Behavioral Objectives, Component V—Pupil Centered Inquiry, and Component VI—Affective Behaviors.

The components were designed to be presented in the above order; however, there is no indication that the components could not be used in any other sequence. The sessions in each component, however, should be presented in the order of appearance.

ASSESSMENT PROVISIONS

Pretests and posttests are provided for each component to be used by the trainer to determine progress of each individual teacher. Opinionnaires are provided in each component for assessing teachers' reactions to the activities, instructional procedures, and assessment devices.

TIME REQUIREMENTS

Forty-eight hours of formal instructional time are required to complete the program and attain the expected results in the case of the average teacher. The program is designed to be taught during approximately 16 biweekly sessions of 3 hours each during the school year. In addition, 15 hours of microteaching are carried out as practice sessions. The developers recommend that the above schedule be carried out without major changes. However, in two implementation sites, it was found that concentrated sessions during the summer with occasional followup sessions were more effective than a full year of biweekly sessions.

IMPLEMENTATION PROCEDURES

Standard audiovisual equipment, including camera and technician, is required in sufficient quantities to provide for microteaching. Organizational requirements should include released time for the trainer to plan and conduct training. In considering special user requirements, it is suggested that the trainer catalog and use video tapes of the teacher participants, rather than model tapes, to overcome resistance often provided to the "ideal" classroom setting.

ASSURANCES AND CLAIMS

The ISD package was field tested during the school year 1971-72 at four sites in Nebraska. Five trainers were involved in the study along with 24 teachers (primarily social studies and biology) at the junior and senior high school levels. The purpose of the study was to assess the effectiveness of the program and trainers in bringing about changes in behaviors of teachers when the developers were not directly involved.

Assessments of the trainers' performances indicated that major activities in all components were implemented as written and all four trainers generally modeled inquiry behaviors throughout the six components.

Assessments of the teachers' performances indicated that all teachers used more inquiry behaviors and were able to demonstrate the pupil-centered inquiry model. In all cases, the amount of factual data was reduced while data interpretation and analysis increased. Use of specific affective inquiry behaviors by participating teachers and their students increased with "openness" behaviors occurring more frequently than "inquiry-orientation" behaviors. Students indicated that they enjoyed their work, exhibited increased "openness" behaviors, and tended to prefer inquiry to other learning strategies.

Feedback indicated that the audio-video components needed improvement, and these revisions were made. It was evident that some trainers were having trouble using the manuals. Based on actual work with some trainers at implementation sites, it was decided by McREL staff that 5 days' orientation and training time was necessary.

During the field test and developmental stages, teachers were asked to complete an opinionnaire to elaborate their successes, failures, and/or dissatisfactions with the program. Many of the statements included technical difficulties with manuals or equipment which were largely corrected during the revision process.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
ISD package (6 training manuals, 3 reels of video tape, 2 reels of audiotape, 32 transparencies, and carrying case)	1 per 10-12 teachers	300.00	Reusable

MINICOURSE 9: HIGHER COGNITIVE QUESTIONING

A training course for preparing teachers to help students (grades 4-8) to think carefully and logically

Minicourse 9: Higher Cognitive Questioning is one of a series developed by the Far West Laboratory for Educational Research and Development. Minicourses are short teacher-training courses that use the microteach technique to improve specific teaching skills. Microteaching, in whch teachers are video taped while practicing short lessons with a small number of students, originated in the Stanford University intern program. The method is an attempt to get teachers actively involved while they learn and to let them learn "by practicing new skills, rather than hearing or reading about them."

The purpose of *Minicourse 9* is to train teachers of grades 4-8 to make greater use of higher cognitive questions. By asking students to support their generalizations, to make predictions, and to give opinions, teachers can help children develop their abilities to think carefully and logically about a subject. It is generally agreed that it is easier for teachers to determine whether students know answers than to judge their use of the information to solve new problems. Past studies show that as many as 60 percent of teachers' questions require students to recall simple facts, that about 20 percent require students to "think," and that the remaining 20 percent are procedural. Minicourse 9 is designed to help teachers reverse this past trend and to get students engaged in more complex thinking.

SUBJECT AREA(S)

The subject areas are inservice or preservice training in questioning students.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers of grades 4 to 8.

GOAL(S) OR PURPOSE(S)

The goals are to provide teachers with skills in higher cognitive questioning so that students will obtain a sense of competence, a feeling that they can answer difficult questions and have worthwhile thoughts, and a desire to contribute to discussions.

PATTERNS OF USE

Using Benjamin Bloom's taxonomy of cognitive objectives as a base, the developers have identified six types of questions commonly used by teachers: Knowledge, comprehension, application, analysis, synthesis, and evaluation. While *Minicourse 9* instructs teachers how to classify and write all six question types, most of the course emphasizes analysis, synthesis, and evaluation questions.

To acquire proficiency in asking these types of questions, teachers follow this instructional pattern: Read the appropriate section from the teacher's handbook outlining the skills to practice, view an instructional film showing how these questions can be used in classes and view a model lesson film showing correct use of skills, plan a 10- to 15-minute lesson using these skills, microteach the lesson, view the video tape to evaluate performance, prepare a new lesson plan, reteach and retape it, and re-evaluate the final performance. Transcripts of model lessons are printed in the handbook so that teachers may read many correct examples of using higher cognitive questions. To help teachers review the skills learned in this 15-day minicourse, followup activities are suggested for future practice.

Units are sequenced according to increasing difficulty. The course materials consist of teacher's and coordinator's handbooks and six reels of 16mm color film.

ASSESSMENT PROVISIONS

Teacher trainees evaluate their own performance. Learning exercises with answers are provided for each of the chapters in the teacher's handbook. Self-evaluation forms are also provided for each microteach and reteach segment. Direct supervision is neither required nor suggested.

TIME REQUIREMENTS

Fifteen days, one hour per day. Optional followup activities are provided.

Summary Cost Information

Initial cost to the user includes the purchase of the instructional films. The coordinator's handbook may be reused. Each teacher taking the course will require a handbook as consumable evaluation forms and checklists are provided therein. Initially the school or district should provide 20-minute blank video tapes, to be used by each teacher for microteaching and evaluation. These tapes can be reused by teachers taking the course later.

Audiotape feedback can be used by districts for which the purchase of a video taping system and video tape would be a financial burden. Research comparisons of video tape and audiotape feedback suggest that *Minicourse 9* can be used with audiotape without lessening its effectiveness. Because this course deals with verbal skills, the teacher does not need to rely on visual feedback to determine how well they are being learned. On the other hand, visual feedback is motivating to most teachers and enhances their interest in the minicourse.

Personnel Required for Product Adoption and Implementation

A coordinator recruits teachers to take the course, introduces the course and methods to the teachers, sets up the course schedule, and maintains the video tape equipment. Any staff member could fill this role, but it is usually filled by a principal or district supervisor.

ASSURANCES AND CLAIMS

Fifty-four teachers who participated in the main field test of this minicourse were asked to rate it according to usefulness. Fifty-two percent rated the course as much better than other inservice education experiences, 33 percent rated it better, and 15 percent rated it as equal. None rated it as worse than other inservice experiences. Ninety-six percent felt that *Minicourse 9* had improved their overall teaching. None of the participants felt that the course had detrimental effect.

Field testing with 80 teachers from 2 California school districts demonstrated that *Minicourse 9* increased the percentage of teachers' higher cognitive questions and that 2 student response measures—frequency and length of higher cognitive responses—both increased favorably as a consequence of the course.

More than 100 teachers in 27 schools from 10 districts in the United States participated in the operational field test of *Minicourse 9*. The operational field test is conducted without developer participation and is wholly coordinated by district or school personnel. This field test established the replicability and transportability of the course.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Instructional/model films	1 set	1,200.00*	Reusable	
Teacher's handbook	1 per teacher	4.00	Consumable	
Coordinators' handbook	1	4.00	Reusable	
20-min. blank video tapes**	1 per teacher	22.00	Annually***	Any commercial dealer

*Films may be purchased or rented for 6 weeks for $200.

**If video tape recording equipment is not available, audiotape may be used

***A video tape can be recorded, erased, and rerecorded about 400 times. Unless a teacher wishes to keep the tape, it can be reused about five times, each teacher taking the course needs a tape—he/she cannot share.

TEACHING CHILDREN HOW TO THINK: SYNTHESIS, INTERPRETATION AND EVALUATION OF RESEARCH AND DEVELOPMENT ON CREATIVE PROBLEM SOLVING

A guide to assist elementary teachers in material selection and development for problem solving and creativity instruction

This is a guidebook for elementary teachers to assist them in selecting or developing and using instructional materials for teaching creativity and problem solving. It also presents information on teaching creativity and problem solving to minority and educationally disadvantaged children. Published materials for teaching creativity and problem solving were reviewed and are presented in the book when there was supporting research or evaluation evidence, a sound rationale, or other signs of instructional effectiveness. Each published product is described in detail in the book, and information is given for ordering it.

Additional chapters in the book review well-established methods for teaching creativity and problem solving, techniques for teachers to use in developing creativity and problem-solving instructional materials, and approaches to the implementation of instruction in the areas of creativity and problem solving. There is also a brief review of the special needs of educationally disadvantaged children, of the most thoroughly researched and evaluated instructional material, and of some theoretical conceptions concerning creativity and problem solving.

SUBJECT AREA(S)

The subject area pertains to a book for teachers for self-study, for use as a reference resource in teacher education workshops, and for use in teacher education courses. It is concerned with teaching creativity and problem solving at the elementary level. The titles and length of the chapters are as follows:

(1) Chapter 1. Teaching Children To Think (5 pages)

(2) Chapter 2. The Rationale (10 pages)

(3) Chapter 3. Reviews of Instructional Material and Books for Teaching Creativity and Problem Solving (89 pages)

(4) Chapter 4. How To Get a Project Started in Your Classroom (27 pages)

INTENDED USERS AND BENEFICIARIES

This book is primarily for elementary teachers. However, it should also prove useful to junior high school teachers, principals, curriculum specialists, and teacher educators. It should be especially useful to people who are searching for new materials or methods for teaching creativity or problem solving.

GOAL(S) OR PURPOSE(S)

The teacher who reads this book should be able: (1) To select good published instructional materials for teaching creativity or problem solving, (2) to select good methods for teaching creativity and problem solving, and (3) to implement instruction in these areas in an elementary classroom.

PATTERNS OF USE

This book can be used by individual teachers or by a group of teachers wishing to begin, improve, or increase instruction in creativity or problem solving in their classrooms. The book can be read within 3 to 5 hours. It should also be used as a reference guide to instructional materials and methods for teaching creativity and problem solving. The book can be used effectively as a resource reference in connection with an inservice workshop on creativity and problem solving. Principals and curriculum specialists can use it as a guide in working with teachers to improve instruction in creativity and problem solving. The book can also be used as a supplementary source of information in education and psychology courses which deal with creativity, problem solving, and gifted children.

ASSESSMENT PROVISIONS

No special provisions have been made for assessing teachers' entry or postreading knowledge of the content. However, an attitudinal questionnaire is available for administration to teacher groups who have gone through a special workshop designed especially for this project.

TIME REQUIREMENTS

The material in this book can be read and studied carefully within 3 to 5 hours. However, teachers can use the book as a selective reference and guidebook without reading all the material. Thus, reading time might be cut to as little as 1 hour.

IMPLEMENTATION PROCEDURES

This book should be used in connection with a workshop for teachers. Teachers should be able to examine the book before the workshop and should be given familiarization activities in the workshop to assure that they understand the features and resources of the book.

MATERIALS AND EQUIPMENT

No other materials are required in addition to the book. However, a supporting workshop requires a slide projector, four professionals to conduct the workshop, and an assortment of illustrative books and instructional material which teachers can examine while they are reading product descriptions in the book.

ASSURANCES AND CLAIMS

Assurances

This product is undergoing field trials at the time this description is being written. Careful examination by a consultant and project staff indicates that the product is free of any biasing information and that it should not induce negative attitudes or reactions in teachers.

Claims

Since the field trials are still in progress, the evaluative evidence is not yet available.

THINKING AND REASONING TEACHER DEVELOPMENT

A teacher training kit to promote the development of children's analytic thinking and problem-solving skills

Thinking and Reasoning Teacher Development is a teacher training kit designed for teachers of kindergarten and 1st-grade children. The program teaches skills in using methods and techniques to promote the development of children's analytic-thinking and problem-solving skills. Teaching skills included in the program are modeling processes, questioning, observing, and giving reinforcement and feedback with a focus on processes and thinking skills.

A teacher's manual includes: (1) An analysis of the problem-solving process; (2) a rationale for teaching each of the thinking skills, relating each skill to the problem-solving process; (3) suggested activities for teaching each thinking skill; (4) methods for designing activities for teaching each skill; and (5) teaching strategies found to be effective in teaching analytic-thinking and problem-solving skills. Included are sample behavioral objectives, questions for stimulating thinking skills, and narrative examples of lessons for each skill.

A trainer's kit includes a trainer's manual for conducting preservice and/or inservice workshop training sessions, including methods for individualizing the training; one video tape or film to motivate and interest teachers in developing children's analytic thinking and problem-solving skills; three video tapes or films, each focusing on a discrete analytic thinking skill such as observing, predicting and inferring, and thinking of unusual uses; and a video tape or film focusing on the problem-solving process. Also included are activities for teachers to reinforce skills addressed in the teacher's manual.

Teacher training usually focuses on subject matter. As a result, children usually learn thought processes incidentally. The product offers a systematic approach for teachers to build an awareness in children of thought processes that can be used in problem situations. Although teacher training concentrates on process teaching, teachers will integrate the focus on processes with the content being taught.

The training workshops are designed to interest teachers in using and building skills in process teaching. The training is offered in modules with emphasis based on concerns expressed by the participants. In order to meet varying learning styles of participants, participants may select from several modes of presentation (such as discussion groups, reading, writing, observing video tapes, and role playing) to meet objectives and competencies.

The teacher will integrate *Thinking and Reasoning* teaching methods into existing curriculums and design new activities with a focus on thinking skills.

SUBJECT AREA(S)

The development of the analytic thinking and problem-solving skills of young children is the subject area.

INTENDED USERS AND BENEFICIARIES

Teachers of early childhood education (K-2) who work with multicultural, low-income children are the intended users of the product because it helps them develop competence in using strategies to advance children's skills in observing and describing, in predicting and inferring, in determining relevant information, in creating unusual uses, in identifying problems, in generating solutions, and in testing and evaluating those solutions.

Of ultimate benefit are the children who have opportunities to develop and refine analytic thinking and problem-solving skills, while participating in meaningful activities.

The training kit was developed for use with the thinking and reasoning program, a curriculum for children in kindergarten and 1st grade. The training is of value to all elementary teachers, and ultimately all elementary-age children, because of the focus on thinking skills and processes.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To build an awareness in teachers of analytic thinking skills and problem-solving skills; (2) to develop teachers' skills and knowledge in process teaching; and (3) to stimulate the development of analytic thinking and problem-solving skills in children.

PATTERNS OF USE

The program can be used as preservice or inservice training independently or as supplement to other thinking and reasoning program materials.

The training activities can be conducted by persons designated by the program adopters. Training for trainers is available from SEDL. Teachers may adapt the program to their school organizational formats, but small-group instruction is recommended for activities designed by teachers.

ASSESSMENT PROVISIONS

Formal testing procedures are not included with the product. An evaluation process is underway (see "Claims").

TIME REQUIREMENTS

Approximately 14 hours of training is required. The training can be broken into blocks of 2 or 3 hours each for inservice training.

IMPLEMENTATION PROCEDURES

SEDL provides training for designated teacher trainers.

ASSURANCES AND CLAIMS

Assurances

The staff development package has been pilot tested with 18 teachers during the 1973-74 and 1974-75 school years. No reports of bias have been received by the multiethnic program staff from either the teachers, who represent three major ethnic groups (Mexican American, anglo, and black), or from the children who represent the same and other ethnic groups.

The ability of the teacher development package to stand alone will be tested by November 30, 1975.

Claims

Based on revisions of the 1974-75 evaluation and the subsequent fall 1975 evaluation, specified claims will be forthcoming. This package is following the same development process outlined for *Thinking and Reasoning Games*.

To date, two types of evaluation data are being collected: teacher evaluations and observer evaluations. Teacher evaluations are of four types:

(1) Teachers complete a concerns list prior to program implementation and again following the pilot test period in an effort to establish whether the teacher development materials met the needs of the teachers.

(2) A preservice evaluation measure assesses the extent of retention of information presented during preservice session as well as the participants' feelings about the session.

(3) Teachers complete a checklist following each lesson of the thinking and reasoning product, part of which deals with adequacy of the teacher development package to prepare for teaching the skills presented in the lesson.

(4) Teachers complete a user questionnaire at the end of the year, recording feelings of adequacy of their own development throughout the year.

Observer information will be gathered approximately 200 times throughout the 1974-75 school year in response to their preceptions of teacher proficiency in teacher development activities.

In addition, the teacher development package will be reviewed by a specialist external to the Southwest Development Educational Laboratory.

MATERIALS AND EQUIPMENT

INFORMATION CURRENT AS OF MARCH 1975 ■

EARLY CHILDHOOD EDUCATION

OVERVIEW

JAMES O. MILLER and SUSAN STAIRS and MICHAEL O'MALLEY

Emory University
Atlanta, Georgia

National Institute of Education
Washington, D.C.

Definition of the field

Early childhood education targets the age range from the prenatal period through 8 years of age, with the greatest functional emphasis being placed upon the 4- through 8-year period. In the public sector, the 4-year span from kindergarten through third grade is most heavily represented. The private sector tends downward to the 3-year level, with day care provided at times for infants and toddlers. Services are primarily delivered in a formal setting, under public auspices in the schools, privately in State-licensed churches, private homes, or proprietary centers. There have been publicly supported demonstration programs targeted toward the geographically isolated or very young through television and/or home visitor systems.

Trends

During the past decade and a half, the field of early childhood education has been undergoing change in scope, definition, and impact. Prior to 1960, early formal schooling was confined primarily to private kindergarten and nursery schools serving the economically affluent. The programs in these proprietary schools emphasized socialization-play curriculums leaning heavily upon the teachings of Froebel and the maturation concepts of developmental psychologists. Despite the selection bias inherent in those served, it was generally believed by the leadership of these programs that later school success was directly attributable to the preschool experience. This position was to be severely challenged during the 1960's.

In the late 1950's a host of converging social, economic, political, and intellectual forces focused the attention of the Nation on the importance of the child's early developmental years. The postwar economic recovery widened the gap between the affluent and the poor. The civil liberties movement demanded greater political equality and a more equitable social and educational opportunity. International political competition with Russia in space placed heavy demands upon the formal education system to produce scientists and technologists capable of meeting the challenge. The works of such educationists and behavioral scientists as Bloom, Bruner, Goodlad, and Hunt suggested that the neglected early years were far more critical and amenable to environmental influences on the development of intellectual competency than had previously been accepted. This heralded a change in curriculum focus.

Within this context, the Nation supported the Federal administration's high priority for education. Congress passed the Elementary and Secondary Education Act and the highly experimental Equal Opportunity legislation. In turn, these actions stimulated national interest and activity in early childhood education.

During the 1960's, early childhood education went quasi-public with such large-scale programs as Head Start. The initial impact was with children of the neglected poor in the 4- and 5-year age range. Programs were supported by massive Federal infusion of funds to State and local authorities on a categorical basis. A gradual enlargement to the age span occurred, downward to include prenatal, infant, and toddlers in the Parent and Child Centers program and upward through the third year of formal schooling in the Follow Through program. However, the curtailment of categorical aid in the 70's by the new administration, the economic crunch of the Vietnam War, the general recession, and the concomitant pinch on school revenues have not encouraged local and State governments to support preprimary programs.

Enlarging the populations to be served brought to question the traditional wisdom concerning curriculum. The emphasis shifted from maturation-socialization play content to a more balanced curriculum. Federal programs of the 60's reemphasized cognitive development and intellectual functioning. Also the exemplary research and demonstration programs placed a greater emphasis on theory and research in curriculum design. Unfortunately, teachers and program directors in the private sector remain relatively isolated from innovation and have little incentive for change. Equally unfortunate is the fact that innovators have yet to develop an effective dissemination network to generally improve curriculum throughout the field.

Federal programs have tended to develop differentiated staffing patterns, expanding the caretaking and teaching force to include trained professionals as well as paraprofessionals, and have supported a concerted effort to include parents as program partners. These practices have had a significant effect upon the public primary years of schooling (grades 1-3).

Federally supported programs have also emphasized bringing a total developmental team to support the child's progress. This has included the health care professions, social and welfare professionals, and others who could contribute significantly to the child's development.

Professor James O. Miller, who is the Director of the Division of Educational Studies at Emory University, Atlanta, Georgia, prepared the Overview sections on the state of the art.

The section on NIE products was prepared by Susan Stairs, Educational Program Specialist in Educational Equity, Multicultural/Bilingual Group, and Michael O'Malley, Acting Director of the Multicultural/Bilingual Group at the National Institute of Education, Washington, D.C.

EARLY CHILDHOOD EDUCATION

The excitement and promise of this accelerated activity have yet to come to fruition. At the end of this decade it seems unlikely that early childhood education has the political clout to compete effectively for an equitable share of the public education dollar. As a matter of public policy, the future is unclear. Perhaps if other States emulate California's example, the public will again be engaged to provide appropriate funding. Elimination of categorical funding has clearly dulled local early childhood education impetus. Lack of funding will undoubtedly have a tendency to constrict the population served, with a greater proportional share going to the more affluent.

The demand for out-of-home care may be expected to increase in the middle-income bracket. A startling rise in the number of women in the work force and the increase in single parent families will have a demand effect. Initially these demands may be met by the private sector. The private sector has been most impervious to change in curriculum improvement and program upgrading. Program standards are minimal standards, emphasizing health and safety practices. Increased cost of the delivery of services may force program directors to demonstrate effectiveness, which would have a salutary effect on the curriculum.

There is a current trend toward a much more militant posture by the professional organizations and the paraprofessional associations and unions toward early childhood education workers. One might expect greater activity in organization of these workers. Should such efforts be successful, one can expect control of entry into the paraprofessional and professional ranks to be fought for hard by the organizational representatives. There is little knowledge of the competencies necessary for effective professionals or paraprofessionals and thus for certification standards.

It appears unlikely and perhaps unwise that the major share of Federal R & D support should continue to be committed to further curriculum materials development. There is a far greater need for focused research and dissemination efforts.

Practitioner needs and further research

Early childhood education needs a long-term commitment by the Federal Government to support a basic focused developmental research program. There is a need for a far better roadmap of the child's course in the socialization process and a better understanding of the role of the significant adult in the educational process. Precious little is known about the effective behaviors and necessary skills of the caretaker.

Basic developmental research has been fragmented. Too little has been spent for analysis and synthesis of the research findings that exist. There needs to be not only a review, but also the translation of findings into practical suggestions and hints of direction for the practitioner. Only a focused effort and a long-term commitment can provide the basic knowledge which can be translated into effective practice.

The curriculum development effort and the products in hand which were generated during the 60's and 70's are practically unknown to the majority of on-line workers. Their mere existence does not mean their adoption and use. People implement. They must be exposed to, trained in, helped with, and inspired to change.

Both Sarason and Goodlad have pointed to the numbing isolation of the practitioner from knowledge, innovation, and exemplary practice. Provision should be made to combat this isolation and bring research theory and practice more closely together.

Longitudinal studies of program effects, including the course of individual development, should be a high priority item. In the past, such studies have not been popular, nor easily done. The English model, the National Child Development Study in Britain, has contributed immensely to our knowledge of educational intervention, and might be profitably studied for adaptation to our own peculiar problems. The technology exists for establishing data banks with uniform data collection formats. This effort could be planned and underwritten at the Federal level with the assistance of the various State agencies having responsibility for overseeing early childhood education programs in both the public and private sectors. Compelling evidence of the efficacy of early childhood education can best be gained through longitudinal study. The contribution of such research should strengthen the focused basic research program.

In the final analysis, it appears that the unique functions the Federal Government is best equipped to assume are: (1) a focused research effort, including the analysis and the synthesis of research findings for application by the practitioner and broad-gauge longitudinal studies which will provide applied and basic knowledge to the field; and (2) the dissemination of proven practice through effective consortium arrangements, perhaps making support contingent upon proven program improvement and demonstrable effectiveness. The Federal Government is the source of last resort when the field is a heterogeneous mix of public and private institutions, without substantial institutional or political constituencies.

NIE early childhood education activities

At the present time NIE has no unified program in early childhood education. Current NIE activities related to this issue crosscut all NIE program offices and often are embodied in large-scale projects whose scope includes but is broader than early childhood.

The most significant NIE activities in early childhood are conducted at three of the educational research laboratories and centers. The Research and Development for Adaptive Education Program at the Learning Research and Development Center (Pittsburgh, Pennsylvania) has three important early childhood components. The New Primary Grades Reading system uses a code-breaking approach to beginning reading with a mixture of synthetic and analytic phonics. Focused on prereading level children, the Perceptual Skills curriculum is concerned with the development of perceptual skills hypothesized to underlie reading through an instructional program. The Self-Schedule System component organizes the classroom program for self scheduling of instructional activities by young children.

The Individually Guided Education Program at the University of Wisconsin Research and Development Center for Cognitive Learning (Madison, Wisconsin) has two components which address early childhood and basic skills education: Prereading Skills Program focuses on processes that prepare kindergarten children for reading, including three visual and two auditory skills; the Reading Skill Development component adapts a skill-centered approach for managing reading instruction at the elementary level to pupil characteristics and needs.

The Early Childhood Program at the Southwest Educational Development Laboratory (Austin, Texas) is concerned with imparting skills and knowledge of child care to parents, carepersons, and other adults involved in performing services for children. It is comprised of three components: a parenting center model, a multimedia training package, and television spots on childrearing practices.

Two other important NIE projects in early childhood education are: (1) the Home Visiting with Mothers and Infants Program at George Peabody College (Nashville, Tennessee) which is designed to enable low-income mothers to offer more effective educational experiences for their 2- and 3-year-old children and (2) the ERIC Early Childhood Clearinghouse which acquires, indexes, and disseminates the significant educational literature for early childhood education.

CLASSIFICATION AND COMMUNICATION SKILLS CURRICULUM (PART OF THE EARLY LEARNING PROGRAM)

An individualized instructional program designed to teach preschool and kindergarten children basic skills in classification and communication

The *Classification and Communication Skills Curriculum* is an individualized instructional program which combines semistructured "prescriptive" learning with more open-ended "exploratory" learning. It is designed to teach preschool and kindergarten children the basic skills involved in: Matching like objects, classifying according to categories, and communicating relationships (e.g., big, little, wide, narrow) and concepts (e.g., color, shape). Children are taught the use of language in abstract thinking and the ability to discriminate and generalize on the basis of commonalities and differences.

The curriculum was designed under the assumption that children display a wide range of differences in their entering abilities and in the ways they acquire competencies. In order to provide learning experiences that are adaptive to individual differences, a curriculum must provide learning situations that can accommodate to the needs of individual students and, where necessary, teach the prerequisite skills demanded by the learning situation. The *Classification and Communication Skills Curriculum* is designed with careful attention to classroom organization and to the provision of a broad range of learning activities, so that the learning environment can respond to these individual needs and differences. This is accomplished by the integration of two types of learning, prescriptive and exploratory.

The prescriptive portion of the curriculum contains hierarchically sequenced lesson units that teach in a structured manner the basic matching, classification, and communication skills. Its major component is a set of learning "kits" containing manipulative and paper-and-pencil materials. The exploratory portion represents a more informal approach to learning which is responsive to children's own interests and rhythms and is meant to foster inquiry, independent thinking, and positive attitudes toward learning and school. Materials for this portion include original and commercially produced games which are keyed to the prescriptive curriculum and from which children are given an opportunity to select.

Active student involvement is an integral part of the *Classification and Communication Skills Curriculum*. Each student works directly with the learning materials and learns to participate in the management of activities. In general, the student is expected: (1) To complete certain tasks prescribed by the teacher, (2) to complete certain self-chosen tasks (e.g., exploratory learning activities), (3) to follow classroom management rules, (4) to locate learning materials and equipment independently, (5) to ask for help from the teacher and/or peers when needed, (6) to take diagnostic tests when asked by the teacher, and (7) to ask the teacher to check completed assignments.

The role of the teacher is important in the successful implementation of the curriculum. In the prescriptive portion, the teacher administers pretests, prescribes learning tasks according to test results, checks the child's progress with the learning tasks on a daily basis, and administers posttests. In the exploratory portion of the curriculum, the teacher serves in the role of facilitator by making activities available and advising and interacting with students according to their particular needs. The activities and functions of the teacher are described in a set of detailed teacher's manuals.

Ideally, implementation of the curriculum requires the presence of two adults in each class—a teacher and an aide. However, since the learning materials included in the curriculum have, to a large extent, been designed for independent use by individual students and require a minimum amount of teacher supervision, the curriculum can easily be adapted for use in classrooms which have only one adult available.

RD 050 001

SUBJECT AREA(S)

Classification, matching, communication of concepts and relationships.

Nine hierarchically sequenced units make up the prescriptive portion of the *Classification and Communication Skills Curriculum*. The instructional units are as follow:

Unit 1—Basic matching skills.
Unit 2—Shape and size discrimination.
Unit 3—Color naming.
Unit 4—Shape naming.
Unit 5—Advanced matching skills.
Unit 6—Size description (big/little).
Unit 7—Length description (long/short).
Unit 8—Height description (tall/short).
Unit 9—Width description (wide/narrow).

The exploratory component is made up of open-ended activities and games which are keyed to the nine units.

INTENDED USERS AND BENEFICIARIES

The curriculum is intended for use with preschool- and kindergarten-age children or with older children who have special instructional needs. The curriculum has been used successfully with children enrolled in both inner-city and suburban schools. Because explicit information as to the operation of the program is provided in the teacher's manuals, teachers with varying amounts of prior training can use the program.

GOAL(S) OR PURPOSE(S)

The *Classification and Communication Skills Curriculum* is designed to enable the young child to acquire functional language skills and to develop conceptual and abstract thinking abilities.

PATTERNS OF USE

The instructional units and tasks within each prescriptive unit are hierarchically arranged, enabling the child to move from unit to unit in a prescribed order and to complete the tasks within each unit according to an established sequence. In some cases, more than one unit or task within a particular unit is considered to be at the same level of difficulty within the hierarchy. When more than one component is available at the same level of difficulty, the child may complete these components in any order, but must complete all of them before moving to the next level of difficulty within the hierarchy. Some of the tasks involve group activity, while others are to be carried out individually or with one or two other children.

Exploratory games and activities are available at each unit level. The child may elect to work on one or more of these at a time, determined either by the teacher or by the child, according to the particular learning management system adopted in the classroom.

ASSESSMENT PROVISIONS

Pretests and posttests are provided for each unit and are an important adaptive feature of this program. Each child is pretested before entering the curriculum and is placed in the appropriate unit(s) according to the level of competence revealed by the test. Once placed in a particular unit, a child completes all learning tasks which were not previously mastered. Upon completion of the learning tasks, posttests are administered, and the child proceeds to subsequent units. The teacher's diagnostic testing manual provides explicit directions regarding the administration of pretests and posttests and placement of children in the curriculum according to test results.

TIME REQUIREMENTS

The *Classification and Communication Skills Curriculum* is individualized, and the student proceeds through the curriculum at an individual rate. Typically, the curriculum is completed by the majority of the children in a classroom by the end of 1 school year.

IMPLEMENTATION PROCEDURES

No special teacher training is required, but teachers should become thoroughly familiar with the curriculum in order to implement it smoothly and to draw upon additional tutoring materials (e.g., exploratory learning materials) which are available when needed.

Personnel Required for Product Adoption and Implementation

Implementation of the *Classification and Communication Skills Curriculum* ideally requires two adults in each class, a teacher and an aide. However, it can be easily adapted for use in classrooms with only one adult present. Detailed directions for use have been developed and are explicitly stated as a part of the curriculum.

ASSURANCES AND CLAIMS

Assurances

The *Classification and Communication Skills Curriculum* is a component of the LRDC early learning program. It has been field tested and used in the LRDC developmental schools in the Pittsburgh area over the past 5 years, as well as in the followthrough, field-testing network and the Head Start planned variation program. No harmful effects have been reported at any of these sites.

The curriculum does not appear to display any racial, religious, economic, age-group, or sex bias. Whenever pictures are used, an attempt has been made to portray males and females who are both black and white. Both "he" and "she" are used instead of the generic "he" in the curricular materials.

The relative ease with which the program can be implemented is evidenced by its continued use in the Follow Through and the Headstart Planned Variation Programs across the country over the past 5 years. At these sites consultants have been available to assist teachers with implementation on an inservice basis. However, the *Classification and Communication Skills Curriculum* should be replicable elsewhere without difficulty because of the detailed information and directions provided in the teacher's manuals.

Claims

Data taken from one of the LRDC developmental schools indicate that the *Classification and Communication*

Skills Curriculum is effective. In general, a large number of the children in the preschool and kindergarten classes are able to make substantial progress through the objectives of the curriculum within a single year. Improvement in learning, determined on the basis of pretest and posttest performance, is shown in those areas in which specific instruction has been provided by the curriculum.

The performance of children using the curriculum also compares favorably with comparison groups. In the inner-city developmental school affiliated with LRDC, a comparison was made between the achievement of students enrolled in the early learning program as a whole and that of students not enrolled in the program. The Wide-Range Achievement Test (WRAT) was selected as the end-of-the-year achievement test. The WRAT scores on the reading and mathematics subtests were found to be equivalent or better than the expected norms for those students enrolled in the Early Learning Program. Both the 1st graders and the kindergarteners scored at or about 5 months ahead of grade level. By contrast, 2d graders not in the early learning program had a median score 6 months behind their expected grade level, and 3d graders were from 6 to 9 months behind their expected grade level.

QUANTIFICATION SKILLS CURRICULUM (PART OF THE EARLY LEARNING PROGRAM)

An individualized instructional program designed to teach preschool and kindergarten children basic mathematics concepts

The *Quantification Skills Curriculum* is an individualized instructional program that combines semistructured "prescriptive" learning with more open-ended "exploratory" learning. It is designed to teach preschool and kindergarten children fundamental concepts and operations of mathematics such as counting, one-to-one correspondence, numerals, comparison of sets, seriation, ordinal position, addition, and subtraction.

The curriculum was designed under the assumption that children display a wide range of differences in their entering abilities and in the ways they acquire competencies. In order to provide learning experiences that are adaptive to individual differences, a curriculum must provide learning situations that can accommodate to the needs of individual students and, where necessary, teach the prerequisite skills demanded by the learning situation. The *Quantification Skills Curriculum* is designed with careful attention to classroom organization and to the provision of a broad range of learning activities, so that the learning environment can respond to these individual needs and differences. This is accomplished by the integration of two types of learning, prescriptive and exploratory.

The prescriptive portion of the curriculum contains hierarchically sequenced lesson units that teach the basic quantification skills in a structured manner. Its major component is a set of learning "kits" containing manipulative and paper-and-pencil materials. The exploratory portion represents a more informal approach to learning which is responsive to children's own interests and rhythms and is meant to foster inquiry, independent thinking, and positive attitudes toward learning and school. Materials for this portion include original and commercially produced games which are keyed to the prescriptive portion and from which children are given an opportunity to select.

Active student involvement is an integral part of the *Quantification Skills Curriculum*. Each student works directly with the learning materials and learns to participate in the management of activities. In general, the student is expected: (1) To complete certain tasks prescribed by the teacher, (2) to complete certain self-chosen tasks (e.g., exploratory learning activities), (3) to follow classroom management rules, (4) to locate learning materials and equipment independently, (5) to ask for help from the teacher, and/or peers when needed, (6) to take diagnostic tests when asked by the teacher, and (7) to ask the teacher to check completed assignments.

The role of the teacher is important in the successful implementation of the curriculum. In the prescriptive portion, the teacher administers pretests, prescribes learning tasks according to test results, checks the child's progress with the learning tasks on a daily basis, and administers posttests. In the exploratory portion of the curriculum, the teacher serves in the role of facilitator by making activities available and advising and interacting with students according to their particular needs. The activities and functions of the teacher are described in a set of detailed teacher's manuals.

Ideally, implementation of the curriculum requires the presence of two adults in each class—a teacher and an aide. However, since the learning materials included in the curriculum have, to a large extent, been designed for independent use by individual students and require a minimum amount of teacher supervision, the curriculum can easily be adapted for use in classrooms which have only one adult available.

SUBJECT AREA(S)

Beginning Arithmetic: Basic Number Concepts

Eight hierarchically sequenced units comprise the *Quantification Skills Curriculum*. The instructional units are as follows:

Unit 1—Counting and one-to-one correspondence to 5
Unit 2—Counting and one-to-one correspondence to 10
Unit 3—Numerals to 5
Unit 4—Numerals to 10
Unit 5—Comparison of sets

Unit 6—Seriation and ordinal position
Unit 7—Addition and subtraction
Unit 8—Addition and subtraction equations

The exploratory component is made up of open-ended activities and games which are keyed to the eight prescriptive units.

INTENDED USERS AND BENEFICIARIES

The curriculum is intended for use with preschool- and kindergarten-age children or with older children who have special instructional needs. The curriculum has been used successfully with children enrolled in both inner-city and suburban schools. Because explicit information as to the operation of the program is provided in the teacher's manuals, teachers with varying amounts of prior training can use the program.

GOAL(S) OR PURPOSE(S)

The *Quantification Skills Curriculum* is designed to present fundamental concepts and operations of mathematics in forms simple enough to be learned by every preschool child, yet broad enough to serve as a conceptual foundation for later work.

Specific instructional objectives are intended to enable the child: (1)To count, (2) to use numbers, (3) to make comparisons of set size, (4) to order and seriate sets according to size, and (5) to make partitions and combinations of sets.

PATTERNS OF USE

The instructional units and tasks within each prescriptive unit are hierarchically arranged, enabling the child to move from unit to unit in a prescribed order and to complete the tasks within each unit according to an established sequence. In some cases, more than one unit or task within a particular unit is considered to be at the same level of difficulty within the hierarchy. When more than one component is available at the same level of difficulty, the child may complete these components in any order, but must complete all of them before moving to the next level of difficulty within the hierarchy. Some of the tasks involve group activity, while others are to be carried out individually or with one or two other children.

Exploratory games and activities are available at each unit level. The child may elect to work on one or more of these at a time, determined either by the teacher or by the child, according to the particular learning management system adopted in the classroom.

ASSESSMENT PROVISIONS

Pretests and posttests are provided for each unit and are an important adaptive feature of this program. Each child is pretested before entering the curriculum and is placed in the appropriate unit(s) according to the level of competence revealed by the test. Once placed in a particular unit, a child completes all learning tasks which were not previously mastered. Upon completion of the learning tasks, posttests are administered, and the child proceeds to subsequent units. The teacher's diagnostic testing manual provides explicit directions regarding the administration of pretests and posttests and placement of children in the curriculum according to test results.

TIME REQUIREMENTS

The *Quantification Skills Curriculum* is individualized, and the student proceeds through the curriculum at an individual rate. Typically, six of the eight units are completed by the majority of children in a classroom by the end of 1 school year. The final two units are intended for advanced students and to introduce concepts customarily taught in 1st grade.

IMPLEMENTATION PROCEDURES

No special teacher training is required, but teachers should become thoroughly familiar with the curriculum in order to implement it smoothly and to draw upon additional tutoring materials (e.g., exploratory learning materials) which are available when needed.

Personnel Required for Product Adoption and Implementation

Implementation of the *Quantification Skills Curriculum* ideally requires two adults in each class, a teacher and an aide. However, it can be easily adapted for use in classrooms with only one adult present. Detailed directions for use have been developed and are explicitly stated as a part of the curriculum.

ASSURANCES AND CLAIMS

Assurances

The *Quantification Skills Curriculum* is a component of the LRDC Early Learning Program. It has been field tested and used in the LRDC developmental schools in the Pittsburgh area over the past 5 years, as well as in the Follow Through field-testing network and the Headstart Planned Variation Program. No harmful effects have been reported at any of these sites.

The curriculum does not appear to display any racial, religious, economic, age-group, or sex bias. Whenever pictures are used, an attempt has been made to portray males and females who are both black and white. Both "he" and "she" are used instead of the generic "he" in the curricular materials.

The relative ease with which the program can be implemented is evidenced by its continued use in the Follow Through and the Headstart Planned Variation Programs across the country over the past 5 years. At these sites consultants have been available to assist teachers with implementation on an inservice basis. However, the *Quantification Skills Curriculum* should be replicable elsewhere without difficulty because of the detailed information and directions provided in the teacher's manuals.

Claims

Data taken from one of the LRDC developmental schools indicate that the *Quantification Skills Curriculum* is effective. In general, the children in the preschool and kindergarten classes using this curriculum over several years show a consistent pattern of increase with age—in both the total number of instructional objectives mastered at the beginning of the school year (entry line) and the total number of objectives mastered by the end of the year (terminal mastery). Data show the typical 3-year-old mastering counting, numeration and one-to-one correspondence objectives; 4-year-olds advancing to the units involving seriation and comparison of sets; and 5-year-olds typically learning addition and subtraction operations for quantities up to 10.

The performance of children using the curriculum also compares favorably with that of comparison groups. In the inner-city developmental school affiliated with LRDC, a comparison was made between the achievement of students enrolled in the Early Learning Program as a whole and that of students not enrolled in the program. The Wide-Range Achievement Test (WRAT) was selected as the end-of-the-year achievement test. The WRAT scores on the reading and mathematics subtests were found to be equivalent or better than the expected norms for those students enrolled in the Early Learning Program. Both the 1st graders and the kindergartners scored at or about 5 months ahead of grade level. By contrast, 2d graders not in the early learning program had a median score 6 months behind their expected grade level, and 3d graders were from 6 to 9 months behind their expected grade level.

Pittsburgh, Pa. 15260

INFORMATION CURRENT AS OF MARCH 1975 ■

THE EXPLORATORY LEARNING PROGRAM (PART OF THE EARLY LEARNING PROGRAM)

A program designed to teach children, preschool to 2d grade, to integrate skills that have been learned in other structured curriculums

The *Exploratory Learning Program* is designed to provide learning experiences in which children are encouraged to integrate the skills they have acquired in other structured curriculums by engaging in self-selected, self-defined activities and by interacting with peers in the course of learning tasks. The materials and activities of the *Exploratory Learning Program* emphasize general cognitive and psychological competencies that cut across subject-matter boundaries. They represent an informal approach to learning which is responsive to children's own interests and rhythms and which is meant to foster inquiry and independent thinking, along with positive attitudes toward learning and school. The program is designed to complement the structured instruction offered in specific curricular areas (e.g., in the *Quantification Skills* and *Classification and Communication Skills Curriculum of the Early Learning Program*) intended for use with children in preschool through grade 2.

The aims and objectives of the *Exploratory Learning Program* are incorporated in two types of learning options, activity centers, and special projects.

Activity centers are physically defined spaces in the classroom where materials for particular kinds of activities are available for self-selected use by the children. The teacher interacts with students within these centers in a less directive manner than in prescriptive curriculums, except where techniques for use of the materials are being taught. Typically, in addition to helping children manipulate the materials and equipment of the activity centers, the teacher intervenes to pose questions and set problems that extend the scope of learning and relate different activities to one another. Activity centers include some of the traditional early school activities, such as a sociodramatic play and role playing, creative arts, construction and block building, and a water-and-sand play. They also include centers for more "academically" oriented activities, such as listening activities (popular children's books are tape recorded in a format that is especially helpful to the child in following along in the book as the story is read), reading and language activities, and math- and science-related activities.

Special projects are sets of materials designed to encourage extended activity, both imaginative and practical, around some theme—for example, "Doctors and Nurses," "Post Office," "Police Station," "Food We Eat," "Growing Seeds," "Beauty Shop," and "Cooking." The projects are generally introduced one at a time and remain available for several weeks in order to allow the theme to be developed. New projects are introduced as interest in the established one wanes. Especially popular projects are reintroduced periodically throughout the year.

The *Exploratory Learning Program* is described in detail in a teacher's manual, which consists of two volumes, one dealing with activity centers, the other with special projects. The volumes contain specific sections for each particular activity or project, and each section provides detailed information regarding such matters as: (1) The learning objectives involved; (2) materials and resources available; (3) specifications for setting up and implementing the activity center or project; (4) specific skills that can be developed through use of the particular materials; (5) intervention strategies, such as questioning, that the teacher may use to enhance children's use of the materials; and (6) a description of the suggested learning activities. The teacher using this program serves in the role of facilitator by making activities available and by advising and interacting with students according to their particular needs.

SUBJECT AREA(S)

The *Exploratory Learning Program* emphasizes cognitive and psychosocial competencies that cut across subject-matter areas. These are learned in the context of specific activities and projects, which are listed and described in the teacher's manual as follows:

Activity Centers (Volume 1)

I. Creative arts activities

II. Construction and block activities
III. Listening, reading, and related language arts activities
IV. Science related activities
V. Math related activities
VI. Sociodramatic play activities

Special Project (Volume 2).
I. The post office project
II. The police project
III. The repairperson project
IV. The beauty shop project
V. The food and cooking project
VI. The doctor and nurse project
VII. The growing seeds and plants project

INTENDED USERS AND BENEFICIARIES

The Exploratory Learning Program is designed for use with children in preschool through 2d grade. It should be useful to any preschool or primary teacher interested in making available to students opportunities to generalize and extend formal learning experiences, as well as increase independence and control over their own learning.

GOAL(S) OR PURPOSE(S)

The *Exploratory Learning Program* was developed to promote the general goals of exploratory or extended learning. These goals are: (1) To provide a wide variety of learning experiences to meet the learning needs and interests of the individual student, (2) to enable each student to achieve mastery of a wide range of educational goals, and (3) to provide some curricular alternatives from which the student can make realistic choices.

The basic rationale lies in the belief that the quality of learning experiences and the utilization of opportunities to learn in school depend largely upon the type of learning environment open to the student.

PATTERNS OF USE

The *Exploratory Learning Program* was designed for use either as a component of the LRDC *Early Learning Program* or as a supplement to other learning approaches. Classroom teachers can use the manual as a guide in developing activities to meet student interests and needs and to promote the development of general cognitive and psychosocial competencies.

The manual suggests many ways exploratory activities and projects can be integrated into the classroom. The activities and projects can be used as a means of producing different levels of learning experiences and learning outcomes, and they can be adapted to meet different levels of competence in children and obtain different outcomes.

ASSESSMENT PROVISIONS

Activities and projects are to be made available to students on the basis of their particular needs, interests, and competencies. The decision to make an activity or project available to a student or group of students is made on the basis of teacher judgment.

TIME REQUIREMENTS

The classroom may be permanently arranged into a number of activity centers, or the centers may be constructed at various times throughout the school year. No time limit accompanies any of the projects or activities outlined in the teacher's manual. They are generally introduced one at a time, and remain available for several weeks in order to allow interest and use to be developed. New activities or projects are introduced as interest in the previous ones wanes. Especially popular activities or projects can be reintroduced periodically throughout the year.

IMPLEMENTATION PROCEDURES

The materials described in the teacher's manual are found in most existing classrooms. In designing the exploratory activities and projects, every effort has been made to use and adapt existing instructional materials from a variety of sources. Existing materials that are appropriate for specific purposes have been identified and appropriate means developed for incorporating and implementing them in classroom settings. The program is designed for use with a wide range of students and within a wide range of educational settings.

Personnel Required for Product Adoption and Implementation

Implementation of the *Exploratory Learning Program* ideally requires two adults in each class, a teacher and an aide. However, it can be easily adapted for use in classrooms with only one adult present. Detailed directions for use have been developed and are explicitly stated in the teacher's manual.

ASSURANCES AND CLAIMS

As a component of the *Early Learning Program*, the *Exploratory Learning Program* has been field tested and used in the LRDC developmental schools and the Follow-Through field testing network over the past 5 years. No harmful effects have been reported regarding any aspect of the exploratory component over this period of time.

The materials used do not appear to display any racial, religious, economic, age, or sex bias. Both "he" and "she" are used instead of the generic "he" in the manual.

The program can be used without difficulty because of the detailed information and directions provided in the teacher's manual. This statement is supported by the continuous, successful use of the exploratory component as a part of the LRDC *Early Learning Program* in Follow-Through sites and the Headstart Planned Variation Program over the past 5 years.

LRDC's evaluative studies of the *Early Learning Program* have reported positive results for the program as a whole and for its two curriculum components. The *Exploratory Learning Program* was in operation at the time of these studies and was not evaluated separately. Further research is necessary to determine specifically how the *Exploratory Learning Program* might have contributed to these findings.

It is important to note that, although this program was designed as one of the components of the *Early Learning Program* and we strongly recommend that it be used in conjunction with the other components, the *Exploratory Learning Program* can be adopted for independent use.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 050 004

CONCEPTS AND LANGUAGE PROGRAM

*Twelve curriculum units to stimulate intellectual and
social development for low-income multiethnic children
ages 5 and 6*

Concepts and Language Program provides a planned curriculum designed and prepared specifically for children who are entering school for the first time. Its multimedia materials include stimulating lessons for direct instruction, activities which encourage independent learning in children, and strategies and plans which help the teaching staff organize each day's instructional program.

As a comprehensive learning system, *Concepts and Language Program* assists young children to develop sensory-perceptual skills; to improve language skills; to develop thinking and reasoning skills; to develop and strengthen feelings of self-worth; to develop knowledge of family, community, and the extended environment; and to develop independent work skills.

These instructional goals are met through four lesson elements that encompass auditory, visual, motor (prewriting), and ideas and concepts learning activities. The design of the instructional product is based on theoretical and developmental knowledge of how young children learn. The sequences of activities have been tested and then revised on the basis of actual classroom use and feedback information from teachers and observers, and from evaluation of the children's performance.

The product calls for involving parents as partners with the teachers in helping the children develop.

Studies indicate that young children's intellectual and social development can be accelerated if they have the opportunity to manipulate objects, if their curiosity is stimulated and rewarded, and if they are exposed to an appropriate language model. Factors especially associated with school success are a high degree of adult-child contact, a high quality and quantity of language used in communicating with the child, and a high level of expectations for achievement which is reinforced by parental praise and encouragement.

The rationale for this product is based on children's need for these enriching experiences very early in life. The laboratory has designed an intervention strategy for a particular target population—multiethnic children from low-income communities, whose native language is English. The strategy is to promote the children's general development and especially to strengthen the skills they need to progress through the elementary grades. The product is designed so that the children build patterns of success in which learning becomes a desirable and attainable goal and school becomes an enjoyable and rewarding place to be.

SUBJECT AREA(S)

Twelve curriculum units comprise the product's lesson materials for direct instruction to children. The units are centered on the following themes:

1. School
2. Body Awareness
3. Self-Concept
4. Family and Home
5. Food
6. Clothing
7. Community Helpers
8. Transportation
9. Community Environment
10. Animals
11. Natural Environment
12. School

Although the lessons are varied and cover different content or skill areas, they are organized into units built around a single theme. Whenever possible, the learning activities in a unit complement and reinforce another by being related to the unit theme or to a particular skill. Each unit contains 20 to 30 lessons, for small-group instruction, in the following training areas: Auditory consists of lessons designed to sensitize the children to environmental sounds, to develop their listening skills, and to help them analyze words and sounds. In these lessons, the children learn to identify and discriminate sounds around them, to follow series of directions, to imitate intonational patterns, and to identify the initial sound of words. Visual includes training that develops the children's awareness and understanding of constant properties (e.g., color, shape, size), develops their understanding of the relationship of objects to themselves and to each other, and to the context of the entire visual field; and teaches the children to focus on, isolate, and identify a single object so they can analyze what they see. The lesson titles and purposes in the visual element relate to five specific skills—constancy, spatial relationships, part-whole and figure-ground relationships, classification, and visual memory. Motor includes two major types of lessons—gross and fine motor. Gross motor skills deal with the total musculature of the body or large portions of it, such as walking, jumping, hopping, and running. Fine motor learning activities include tasks requiring manipulation of objects, cutting, tracing, pasting, and coloring. Prewriting includes lessons designed to develop eye-hand coordination in tasks leading from writing basic line forms to writing letters and numerals. Lessons focus on teaching uppercase and lowercase letters. Ideas and Concepts focuses on developing language and cognitive skills. The lessons introduce concepts, expand ideas related to them, and incorporate skills that are related to a concept or to its application. The children acquire skills such as labeling, developing category rules, classifying on the basis of concepts learned, and learning the parts and functions of objects. Children also describe objects, narrate events, make explanations, generalize from particular instances, and predict what will happen in given situations. They use skills and knowledge acquired earlier to think about and solve new problems. Independent work activities include activities in which children work on their own after an initial demonstration of equipment or an explanation of a specific task. There is no continuing, direct teaching during the activities. Related activities provide children with firsthand experiences which relate to and supplement what has been taught in the curriculum. They are divided into two categories: Those which provide receptive experiences and those which provide expressive experiences. Field trips, pictures, movies, and books are all receptive experiences from which the children absorb new material and ideas. Expressive experiences include all forms of communication, both verbal and nonverbal, art, music, drama, and dance.

INTENDED USERS AND BENEFICIARIES

Concepts and Language Program has been designed specifically for English-speaking children from low-income communities who are entering school for the first time (kindergarten level). However, since the materials are available for purchase, they are being used satisfactorily with children of various ethnic and socioeconomic backgrounds.

A self-contained, instructional, staff package which accompanies the curriculum material was developed to assist teachers and administrative staff to implement the instructional program. The package contains an administrator's handbook primarily for school principals, a supervisor's manual for the designated supervisor in charge of implementing *Concepts and Language Program* in the school district, and a teacher's instructional package containing several manuals.

Although the instructional staff materials were designed to accompany the curriculum materials, four of the manuals—"Setting Up the Classroom," "Classroom Management," "Teacher Expectations," and "Getting Started"—can also be useful as a single product. College and university administrators as well as principals have indicated interest in using these products for staff training and college-related courses.

The parent activity materials were designed exclusively to involve parents in their children's development. They include a teacher-parent handbook that helps the teacher work effectively with parents. Parents are provided 12 activity packets consisting of learning games and other activities which they can use at home to reinforce their children's learning.

GOAL(S) OR PURPOSE(S)

The *Concept and Language Program* has five general goals: (1) To develop sensory-perceptual skills; (2) to develop language skills; (3) to develop thinking and reasoning skills; (4) to develop and strengthen feelings of self-worth; and (5) to develop knowledge of family, community, and the extended environment.

PATTERNS OF USE

Unit organization integrates the skills learned in the different types of lessons (visual, auditory, ideas and concepts, motor, related, and prewriting). Whenever possible, lessons in all areas have been planned to correlate with concepts introduced in the unit.

Within each skill area, lessons begin with the lowest order of skill and proceed systematically to higher levels. Related lessons do not necessarily occur sequentially within one unit or within one curriculum element. Because of the systematic buildup and integration of skills, it is essential that curriculum units be presented in order. Readiness skills are emphasized and sequentially presented throughout the entire instructional program.

Although not included among the seven major types of lessons or curriculum elements, other concepts are also introduced in certain lessons. For example, mathematics is incorporated into the body awareness unit by letting children count their fingers, toes, eyes, and ears. Many visual lessons involve prerequisite mathematical skills and concepts. Prewriting lessons teach the children to write numerals. Simplified health studies—washing hands, brushing teeth—introduce science. Other science and social studies concepts are included throughout the program, especially in ideas and concepts lessons. Therefore, teachers who are designated to teach these specific subjects may use these activities separately, either to introduce the concepts or to reinforce them.

ASSESSMENT PROVISIONS

Tests, along with learning and assigned and independent activities, are an integral part of the *Concepts and Language Program*. During the developmental phase of the program, test results were used primarily to judge which lessons were appropriate for the children and how the lessons should be taught. Testing serves two purposes. Test results are used to decide which lessons should be retaught and to evaluate the progress of the children.

Two kinds of criterion-referenced tests administered are unit tests and mastery tests. Unit tests are short tests given at the end of each unit to test the child's ability to meet some of the performance objectives of the lessons within the unit. Mastery tests are administered four times during the year to examine the child's learning across several units. The mastery test requires the child to generalize or transfer what has been learned to a different situation or problem.

The curriculum test manual contains a grid for recording pupil mastery on each item for each item for each test. This method of recording provides the teacher with a student profile chart of progress throughout the year.

TIME REQUIREMENTS

In general, the program materials require up to 3 hours per day. In allowing time for lessons, teachers are encouraged to take into account length and difficulty of the lesson, the children's attention span, and the degree of difficulty the children tend to have with a particular type of lesson.

Sample daily schedules which have been used successfully at different schools are provided for the teachers. Normally it takes about 2 weeks to complete a unit.

IMPLEMENTATION PROCEDURES

The *Concepts and Language Program* has been tested with 5- and 6-year-old children, but may be used with younger children who show the maturity of being able to work in a planned learning environment. It can also be used with older students who lack experiences related to their overall development.

It is recommended that each class have a supervising teacher and an assistant teacher who may be a paid aide, an older student, or an adult volunteer. Both teachers teach lessons from the curriculum usually to small groups of children.

Both the teacher and the children use all parts of the room for various activities. Different sections of the room are set up for reading books, role playing, arts and crafts, and block building.

The product provides a basic equipment list which indicates: (1) Required items for each classroom, such as a semicircular table, grease pencils, smocks or aprons for children, yarn, and hole punch; (2) required items which may be shared among classrooms, such as block building and manipulative objects, outdoor equipment, magnets, rhythm instruments; and (3) recommended equipment which is not required, such as tool box and tools, mix and match puzzles, nesting blocks, wooden cutouts of community workers. All required items must be purchased for classrooms (minimal list); therefore, a list of manufacturers with addresses is supplied. These materials and equipment are in addition to the variety of media provided by the product.

ASSURANCES AND CLAIMS

Assurances

During developmental stages, multiethnic children and teachers were used for testing the materials in an attempt to eliminate any possible harmful effects and social biases. The curriculum was tested primarily with the target population for which the product was originally designed, specifically, multiethnic children from low-income communities who were entering school for the first time. The program staff, which was of multiethnic composition, had frequent interaction with teachers to insure the exclusion of social, ethnic, and sex biases. Market success of the materials provides a basis for assurance of replicability and transportability.

Claims

During the 1972-73 school year, the *Concepts and Language Program* was tested in Tulare County (California) Public Schools, Saint Martin Parish (Louisiana) Public Schools, and Austin (Texas) Public Schools. A series of pupil assessment instruments was used, along with a user questionnaire, which was administered to teachers and aides in an attempt to assess satisfaction with the program and to identify problems in program implementation.

The data generally support the claim of overall product effectiveness, although some of the comparative data relating to product superiority were mixed.

CONCEPTS AND LANGUAGE

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 050 005

GETTING STARTED (PART OF THE CONCEPTS AND LANGUAGE COMPONENT)

A training manual for kindergarten teachers that implements planned learning experiences for preschool children

Getting Started is a training manual that has been prepared in an attempt to incorporate the best efforts and techniques that teachers may use to introduce children to themselves and their classrooms.

The information gives a model of learning activities in order that children may get important learning experiences. This model includes daily and weekly planned schedules, mixing aesthetic experiences, outside play, and other activities into unique experiences appropriate for young children.

The model is organized by teaching days. The schedule is based upon suggestions made by experienced teachers, and it provides a framework which has been proven successful in numerous classrooms.

Getting Started encourages teachers to plan their days and weeks carefully, utilizing planned learning activities as a core. Its intent is not to discourage teachers who may know better ways to accomplish objectives, but to give assistance to those who may need a way, who may depart from planned learning, and who may wish to change their way for various reasons.

The design incorporates suggestions from both new and experienced teachers and from program staff observations in classrooms.

SUBJECT AREA(S)

The first 5 days include activities for acquainting the children with the classroom, establishing daily routines, and showing the children how to work in small groups. During the second 5-day period, the supervising teacher should become well acquainted with each child's performing level. The schedule provides test time for the supervising teacher, and activities for the assistant teacher to present to the class. These activities establish the routine for dividing the class into four groups of eight children each. This is the recommended group size for effective instruction.

Two types of activities are included in this unit:

(1) Orientation—Activities to assist teachers in introducing the children to daily classroom and school routines. The specific directions to the children should be repeated daily until the routines are firmly established. Instructions for demonstrating manipulative equipment that the children will use independently and for acquainting the children with specific areas of the school and classroom are also included.

(2) Lessons—Learning activities with stated objectives. The sequence of orientation may be changed to meet the needs of individual classrooms. Teachers may add any appropriate activities that are not included and omit those activities which they consider inappropriate.

Getting Started also includes material to assist teachers in planning their work. This material includes weekly plans, daily plans, schedules, and classroom arrangements. Lists of books for teachers and for the classroom library are suggestions for use with this unit. These lists may be used as a guide for selecting books related to other units which will be taught during the school year.

INTENDED USERS AND BENEFICIARIES

The product was designed primarily for kindergarten teachers who are implementing planned learning experiences and supervisors in charge of teacher training.

The product not only meets the needs of teachers utilizing programs such as individually guided education, but may also be used by research and development centers, curriculum specialists, teacher training institutes, and college and university instructors.

GOAL(S) OR PURPOSE(S)

The purposes of this model are: (1) To help teachers plan learning experiences for children, (2) to provide a classroom-tested model for new and experienced teachers, and (3) to provide a resource that will help teachers adapt organizational teaching techniques throughout the year.

PATTERNS OF USE

Getting Started is a self-instructional manual that can serve as a helpful resource throughout the year. This manual has also been serviceable for supervisors in charge of teacher training. It may be used by administrators, college and university personnel, and others linked with teacher training programs.

ASSESSMENT PROVISIONS

The sources of assessment for the model have been a user questionnaire, the classroom teachers utilizing the model, and instructional staff trainers. The program staff has sought reactions to the use of the model and the content during preservice and inservice workshops as well as site visits. This was done primarily with questionnaires and oral conferences. User satisfaction data were also collected after practical use of the model.

TIME REQUIREMENTS

The model is designed for completion in approximately 10 days. However, since this training manual is individualized, time completion will vary depending upon the users, class size, and amount of time it takes students to become oriented to the classroom and school routines.

IMPLEMENTATION PROCEDURES

Although the manual is primarily self-instructional, trainees may benefit from workshops at which detailed explanations and specific questions are addressed. To take full advantage of the individualized nature of the product, users should use the information to fit the teaching situation, for example, 1/2-day and 1-day programs.

ASSURANCES AND CLAIMS

Teachers and administrators have found this model appropriate for use with young children in open-classroom settings, individualized learning centers, and self-contained classrooms. The model seems to work equally well in each of these instructional environments, and has been used effectively in both self-contained and team-teaching strategies. It has been suggested that this model is particularly useful with individualized instructional programs involving young children.

The model was utilized by multicultural teachers. The program staff, also multicultural, reviewed the materials for biases, and an informal review of the model was made by an intern working in the program. Where biases were evident, attempts were made to correct the situations. Since marketing, the product was carefully reviewed in depth by school personnel who were expressing a desire for their schools to become demonstration centers. The program staff has found the model usable without training, therefore insuring replicability and transportability.

CLASSROOM MANAGEMENT, K-1 (PART OF THE CONCEPTS AND LANGUAGE COMPONENT)

A training manual describing teacher behaviors and attitudes that create an interesting and smooth-running classroom for grades K-1

Classroom Management is a training manual that describes those teacher behaviors and attitudes which create interesting and smoothly running classrooms. It describes how teachers can prevent misbehavior and increase work involvement. The manual includes ways of handling misbehavior and describes techniques for coping with special behavior problems.

Studies indicate that the successful teacher must be a good classroom manager, because teachers who cannot manage classroom behavior have little time for instruction. This is the rationale on which the Southwest Educational Development Laboratory has designed *Classroom Management*. Concise examples are given to help teachers control attention or behavior. These examples include ways of showing respect for children. The teacher helps the children distinguish between their feelings and behavior. Children are taught to accept normal feelings of anger or frustration, but at the same time the teacher makes it clear that these feelings do not justify physical hostility. Specific techniques for handling misbehavior are illustrated for teachers. Teachers role play, using recommended methods such as ignoring minor misbehavior, and the following "stop-it" techniques: Eye contact, touch and gesture, physical closeness, and praising or calling attention to good behavior. Teachers are familiarized with these direct intervention techniques to enable them to handle problems without calling attention to misbehavior and without interrupting teaching.

SUBJECT AREA(S)

Classroom Management consists of three chapters. Chapter 1, "Preventing Misbehavior and Increasing Purposeful Classroom Activity," describes for the user behavior and attitudes that have been found to prevent misbehavior and to increase purposeful classroom activity, such as respect for children, belief in children, careful planning, providing activities that match children's interests and abilities, explaining classroom rules, praising and encouraging good behavior, and focusing on children's learning rather than compliance.

Chapter 2, "Dealing With Misbehavior," emphasizes three principles of control: Showing respect for children even when dealing with misbehavior, avoiding punishment whenever possible, and considering the effects of one's own behavior. Specific techniques for dealing with misbehavior are listed for teachers.

Chapter 3, "Special Behavioral Problems," deals with special types of "problem children," children whose behavior problems are more deeply rooted than the everyday ups and downs observed in all children. Some of the more common types, along with suggestions for changing their behavior, are discussed in this chapter. The types include the defiant child, the inhibited child, the unresponsive child, the showoff, and the aggressive child.

INTENDED USERS AND BENEFICIARIES

This product was designed primarily to give assistance to kindergarten teachers and supervisors in charge of staff training. Teachers and supervisors who used the product have reported it useful for all teachers of young children.

Other potential users are coordinators of child development centers, students in university and college teacher training programs curriculum specialists, parents, and administrators and coordinators of school districts.

GOAL(S) OR PURPOSE(S)

The purposes of *Classroom Management* are: (1) To help teachers manage their classrooms effectively, (2) to provide helpful teaching techniques and strategies, and (3) to provide specific information that will help teachers discover the best way to handle classroom problems.

PATTERNS OF USE

Classroom Management is a self-contained, instructional staff package. It may be used by supervisors, coordinators, head teachers, or administrators for the training of other personnel. If used in this manner, specific instructions are given. It features frequent simulation and role play of basic techniques that the user must learn. *Classroom Management* is also a transportable, self-contained package that is organized in such a way as to be easily understood and used by teachers on their own.

ASSESSMENT PROVISIONS

The source of assessment for the *Classroom Management* product has been a user questionnaire employed by classroom teachers and instructional staff trainers.

TIME REQUIREMENTS

This product provides the basis for a 2-hour initial training session. Some supervisors conduct workshops throughout the year in which portions of the package are used continually. Individual teachers may use the package as a reference tool whenever needed.

IMPLEMENTATION PROCEDURES

The instructional package has been tested successfully with both individual teachers and supervisors in charge of teacher training. It is recommended that small-group sessions be used whenever possible so that trainers can respond to individual teacher needs.

ASSURANCES AND CLAIMS

The product was used initially by instructional staff trainers and teachers. They recommended that the product be made available to teachers at the elementary level.

The product was reviewed by multiethnic teachers and program staff members for biases. Biases were corrected when evident.

The product is usable without training and is assured to be replicable and transportable.

DARCEE PRESCHOOL PROGRAM

Materials for use with children from ages 3 to 5 providing planned activity sequences for preschool teachers

The Demonstration and Research Center for Early Education (DARCEE) at George Peabody College and CEMREL, Inc., have developed an approach to early childhood education that emphasizes how teachers can use physical environment, grouping, team teaching, positive reinforcement, and careful planning to bring about important cognitive and attitudinal growth in young children. The program is aimed at children from 3 to 5 years of age. Basic skills and attitudes are taught through a variety of small- and large-group activities. The activities are not prescribed by the DARCEE program; instead, teachers follow the DARCEE principles of sequencing, materials selection, team teaching, and planning to devise activities to achieve behavioral goals.

The program objectives are set out in an extensive recordkeeping book. This makes it possible for teachers to keep careful track of children's progress and to plan new activities to meet their needs. A set of 11 resource guides with suggested activities provides teachers with ideas. The resource guides are on such topics as "All About Me," "Plants," "Transportation," "Farm Animals," and "Seasons." A teacher's guide and evaluation materials help teachers implement the program successfully and judge their own progress.

An important feature of the DARCEE program is team teaching. The team consists of a lead teacher and one or more assistants. Each adult in the classroom functions in a teaching role. Each adult plans and schedules activities, works with small groups of children, and keeps records.

The *DARCEE Preschool Program* is an outgrowth of the early training project, undertaken in 1961 by Susan Gray and Rupert Klaus of George Peabody College. The early training project was among the first research intervention programs of the 1960's aimed at halting progressive educational retardation in disadvantaged children.

The instructional principles upon which the *DARCEE Preschool Program* is based are drawn, in part, from the developmental theory of Jean Piaget. Information processing of the phenomena of the child's environment is facilitated by relying on gradual presentation of material from the child's immediate to more remote surroundings. Also, emphasis is placed on having children match like objects, then recognize by pointing to a named object, and finally, identify (name) an object verbally. Such a sequence builds up the child's skills gradually without asking for mechanical or rote response.

The most important single element in a DARCEE classroom is a well-trained teaching team. Teachers create materials, plan and present activities, and structure the learning environment to be sure that children will achieve the stated behavioral goals of the program. The program essentials all involve how teachers should interact with children to bring about these goals.

Parent involvement is considered an important aspect of the DARCEE approach. However, specific materials and techniques for encouraging parents to become involved in their children's school experiences are not provided. They are left up to the teachers.

Teachers in a DARCEE classroom set a daily schedule. Each day they decide, during a planning and evaluation session, which activities will be used the next day. Activities are based on the current day's experiences and the level of mastery the children have shown in specific skills. Typically, the lead teacher holds sessions for the entire group of children at the beginning and end of the day. Large-group activities often concentrate on a subject matter unit of instruction, such as farm animals, autumn, or "my city." The class then breaks up into small groups with a teacher responsible for each one. Two small-group times are usually scheduled each day. At these times, children might do manipulative activities which supplement the unit teaching (such as making a model or coloring a picture), or other general skill building tasks (such as puzzles, weaving, visual patterning, math games, letter recognition). A special "structured free choice" time is offered each day—during this time children can choose among several activities.

Teachers in the classroom are responsible for keeping records and planning activities for the children in their small groups. Recordkeeping becomes very important, not only to document children's growth and progress, but also as a planning sheet for determining which kinds of activities to introduce next.

SUBJECT AREA(S)

Early childhood education: Comprehensive instructional model

The DARCEE program is a structured approach to preschool learning which relies heavily on teacher initiative in planning activities and making and presenting materials to achieve specific behavioral goals; it concentrates equally on cognitive and attitude development.

INTENDED USERS AND BENEFICIARIES

Kindergarten, day care, nursery school, and other preschool teachers are the intended users. The materials and activity ideas are aimed at preschool children, primarily 4- and 5-year-olds, although some 3-year-olds have also used the materials. Although field testing of the *DARCEE Preschool Program* (in 49 classrooms in 4 sites) focused exclusively on low-income children, the program is equally applicable to all preschool children. Because the program focuses on a set of behavioral objectives and does not insist on specific curriculum content, the DARCEE program can adapt easily to the needs of any ethnic or socioeconomic group and can be used with many commercially available curriculum materials.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To provide preschool children with the skills and attitudes they need to succeed in school; (2) to offer a program based on careful planning and predictable environments, where events are interrelated and experience builds upon experience and where teachers react positively to demonstrations of new skills; and (3) to give teachers the principles by which they can attend to children's individual needs and help them achieve, through planned activity sequences, important preschool objectives.

PATTERNS OF USE

The DARCEE program's objectives are arranged into four sequential levels of difficulty; a fifth level designates general or unsequenced objectives. Teachers are encouraged to follow the levels in introducing new skills and planning activities.

The topics of the 11 resource guides are generally sequenced, starting with topics from the child's immediate world and working toward the larger environment. Within each unit, activities begin with simple, concrete ideas and move to those that are more complex and abstract. However, a teacher is not expected to use all the activities in a resource guide (although the activities would probably be used in the order that is suggested). A unit may be omitted or other topics substituted as long as DARCEE sequencing principles are maintained.

As a system, the DARCEE program is comprehensive and instructional. The program presents a philosophy of teaching and presentation that is all a teacher would need to organize a preschool class. The exact activities and materials used to accomplish the set of objectives provided by the program is left up to the teacher.

ASSESSMENT PROVISIONS

Teachers being trained to use the DARCEE program are assessed in several ways to be sure they understand the principles of DARCEE instruction. The teacher's guide includes self-assessment exercises; a test is given at the conclusion of training, and an implementation measure can be used by any nonteaching observer to rate DARCEE classrooms on whether they conform to essential DARCEE principles.

Assessment provisions for children include pretesting and posttesting on the *Test for Assessment of Basic Skills*, a domain-referenced measure specially constructed to test the attainment of the DARCEE program objectives and on the Boehm Test of Basic Concepts. In addition, careful student recordkeeping is an ongoing part of the teacher's activities.

TIME REQUIREMENTS

Normally, the DARCEE program would be used as the entire preschool curriculum for 1 year of instruction.

IMPLEMENTATION PROCEDURES

Training sessions of varying lengths were used during field testing of the DARCEE program. Participants in 2-week sessions with the inservice training by DARCEE trainers or local coordinators were compared to groups who were simply given the materials to read and provided one inservice training meeting. All groups were able to implement the program, although those who had the training and a local coordinator tended to implement the program at a higher level and to improve in performance over the year. For this reason, the developer recommends that a local coordinator be used to oversee teachers in the DARCEE program, to run preservice and inservice training sessions. Personnel would also be needed to carry out pretesting and posttesting of children, if it is decided upon.

A complete trainer's guide is provided to help coordinators plan and implement preservice and inservice sessions. The trainer's guide is keyed to the extensive teacher's guide. The teacher's guide for the DARCEE program can be viewed as a minitraining course. It provides readable lessons, self-check exercises, and step-by-step instruction in the major features of the DARCEE program.

Personnel Required for Product Adoption and Implementation

One lead teacher and at least one instructional aide are needed to implement each DARCEE classroom.

To achieve the highest level of implementation, a local coordinator should be assigned to train and advise DARCEE teachers throughout the school year. Depending upon the number of teachers using the DARCEE program, the coordinator's job might be a part-time position, or a full-time job, or might be handled by a regular counselor.

ASSURANCES AND CLAIMS

Assurances

This set of materials was evaluated in 49 classrooms at 4 sites during 1972-73. Black, white, Puerto Rican, and Indian children, in both kindergarten and day-care settings, have used the materials. The developers have not received any reports of harm associated with the use of this product. Materials were carefully scrutinized during the developmental stages and again at the conclusion of field testing to eliminate any form of social bias or inappropriateness of content.

Information gathered from the field test indicates that the materials can stand alone in the hands of a competent teacher with no aid beyond that given in the teacher's guide. Implementation will be enhanced, however, if a coordinator or adviser is able to provide teachers with continuing training and support in a preservice training session and throughout the school year.

Claims

Evaluation of the DARCEE field test showed that teachers who were trained in the DARCEE approach understood the program's features and implemented them faithfully and well. However, even the teachers who asked to read the materials on their own, without outside training, were able to implement most of the program essentials at a fairly high level.

Children in the program scored as high as or higher than students from other programs when measured by a standardized test of learning skills. An informal test of parental preference showed DARCEE was preferred 2 to 1 over two other well-known early childhood programs.

IMPROVING MOTOR-PERCEPTUAL SKILLS (IMPS)

A teacher's manual containing 34 activities for improving motor perception of children from ages 4 to 7

Improving Motor-Perceptual Skills (IMPS) is a teacher's manual containing 34 activities for the improvement of motor perception in kindergarten children.

Kindergarten and 1st-grade teachers often notice that a poorly coordinated child has learning problems. Recent research in the field of motor-perceptual development indicates: Effective learning demands skill in form perception, symbol recognition, visual-language development, and other motor-perceptual abilities; proficiency in these skills requires development of general coordination, balance, body image and position in space, eye-hand coordination, and control of eye movement; these motor-perceptual skills often are inadequately developed in children exhibiting learning problems; and helping children develop these skills can prevent or alleviate some learning difficulties.

The IMPS guide is designed to help teachers conduct activities which help develop these skills in kindergarten children.

The guide provides teachers with objectives and general purposes for each activity, lists of materials needed, suggested directions to children, and directions to teachers, with variations. Minimum acceptable performances for children are included.

Children understand expectations, observe and participate in activities, and practice skills in an enjoyable, noncompetitive situation.

Sample Lesson

Imitation of Movement

Objective: To imitate eight arm-and-leg movements produced by the teacher.
Look at me and do as I do.
Demonstrate the following movements. Hold each for an instant and return to position. Do not talk. Children are to copy what they see.

SUBJECT AREA(S)

The subject area is physical education (child physical development).

INTENDED USERS AND BENEFICIARIES

The intended users are children of early childhood, ages 4-7; the product is targeted specifically at kindergarten age children.

GOAL(S) OR PURPOSE(S)

The major goal is to assist children to improve physical development. Categories included are: (1) General coordination (march, jump, hop and skip, and step-slide and gallop); (2) balance (jump board and jump tire, walking board—forward); (3) body image (identification of body parts, imitation of movements, angels-in-the-snow, obstacle course—step 1, and everyday activities and sand table); and (4) eye-hand coordination (beanbag activities and rolling the ball).

PATTERNS OF USE

All 34 activities are suggested for use with kindergarten children during the first few weeks of school. However, the activities are listed according to organization rather than sequence of teaching. Teachers are encouraged to integrate activities from each of the various groupings, using them with increasing complexity throughout the year.

ASSESSMENT PROVISIONS

A complete motor-perceptual survey is provided in the guide for sequential testing five times a year. Each child's growth becomes evident by use of the periodic survey.

TIME REQUIREMENTS

Periods of 15 to 20 minutes daily are recommended for formal instruction. Additional activities should be permitted during free time.

IMPLEMENTATION PROCEDURES

Activities require music and a minimum amount of equipment. The guide includes directions for construction of a jump board, a walking board, a balance board, and a pegboard. Other equipment is suggested (e.g., barrels, large blocks).

MATERIALS AND EQUIPMENT

The teacher's guide is essential and not consumable—cost $3.50. Other materials would include lumber (e.g., for construction of boards)—a one-time cost of about $20. It is suggested that two or three parents construct the items as an evening project.

ASSURANCES AND CLAIMS

The materials have been examined for assurance of no psychological harm to children and cultural and social fairness. The materials, when used according to specifications, were found not to be harmful.

LEARNING ACTIVITIES FOR USE BY CLASSROOM TEACHERS, COLLATED TO 58 DEVELOPMENTAL COMPETENCIES FOR PRESCHOOL CHILDREN (AGES 3-5 YEARS)

Learning activity cards to guide classroom activity selections for classroom teachers of children from ages 3 to 5

Classroom learning activities is an age-graded, activities approach to learning for the 3- to 5-year-old child who is in a center-based program, e.g., kindergarten, preschool, Head Start. Learning activities are provided for each of the 58 child competencies which span the developmental areas: Language-cognition, social-emotional, and perceptual-motor. The teacher has a card file which aids in selecting learning activities.

Each activity suggestion appears on a card that is filed under a particular competency to which it contributes. These assignments were made by following guidelines established through judgments of a panel of 34 expert early childhood practitioners. Individual activity cards are further assigned to developmental age levels (ages 3, 4, or 5 years) or, in some instances, comments on the cards identify how to make necessary age adaptations. Cards further identify resources or materials necessary to conduct the activity.

The card file format permits a ready selection of learning activities to correspond with the objectives of the teacher or program. Perhaps more importantly, activities can be selected to fit the individual learner's development level and individual learning program. A sufficient variety of activities is provided under each competency to appeal to children of differing backgrounds and interests, while permitting the child still to progress in the targetted areas of development. The 58-competency base undergirding these materials was established through an extensive empirical analysis of young children's development. (See Appalachia Educational Laboratory's *A Competency Base for Curriculum Development in Preschool Education.*)

The role of the classroom teacher is observing the children, recording behaviors, planning for areas in which children are ready to learn, and selecting activities from the file to interest and challenge children at their developmental ages in specific competency areas. The children learn by active participation in the activities themselves. The children's progress can be charted in terms of competencies.

SUBJECT AREA(S)

The subject area is a comprehensive set of learning activites for classroom use with 3- to 5-year-olds.

INTENDED USERS AND BENEFICIARIES

Classroom teachers of 3- to 5-year-old children are the intended users. The children are the beneficiaries.

GOAL(S) OR PURPOSE(S)

The goal is to support the preschool teacher's selection and use of learning activities which fit the learning characteristics and needs of the individual child.

PATTERNS OF USE

The learning activities are flexible enough to permit individualized planning for each child. The program follows a child developmental pattern within each competency area.

ASSESSMENT PROVISIONS

Assessment measures are not provided. Sample prototypic evaluation items are available for each competency, but the preparation of the complete child evaluation instrument was not funded during 1975. This work will be carried forward in 1976 if the National Institute of Education supports it.

IMPLEMENTATION PROCEDURES

Use of the product is predicated on the availability of a reasonably equipped preschool classroom and out-of-doors area.

MATERIALS AND EQUIPMENT

The price of the activities cards and a small accompanying booklet is not yet available, since development and production are still in progress.

ASSURANCES AND CLAIMS

No assurances and claims can be made at this time, since the materials have not yet been field tested. However, every precaution is being taken to insure against race or sex bias or harmfulness. They should be made available for selected experimental use during 1976 to complete determinations regarding assurances and claims.

RD 050 010

LEARNING ACTIVITIES FOR USE BY HOME VISITORS AND PARENTS, COLLATED TO 58 COMPETENCIES FOR PRESCHOOL CHILDREN (AGES 3-5 YEARS)

Learning activity cards to guide home visitors and parents of 3- to 5-year-olds in learning activities in the home

Learning Activities for Use by Home Visitors and Parents is an age-graded, activities approach to learning for the 3- to 5-year-old child who is in a home-based program of early childhood education. Learning activities are provided for each of the 58 child competencies which span the developmental areas: Language-cognition, social-emotional, and perceptual-motor. The home visitor has a card file which aids in selecting learning activities.

Each activity suggestion appears on a card that is filed under a particular competency to which it contributes. These assignments were made by following guidelines established through judgments of a panel of 34 expert early childhood practitioners. Individual activity cards are further assigned to developmental age levels (ages 3, 4, or 5 years) or, in some instances, comments on the cards identify how to make necessary age adaptations. Cards further identify home resources or materials necessary to conduct the activity. In some cases, materials will be locally supplied to parents through the home visitor.

The card file format permits a ready selection of learning activities to correspond with the objectives that are set for the individual child. The objectives will be determined by the child's level of development and activity interests. A sufficient variety of activities is provided under each competency to appeal to children of differing backgrounds and interests, while still permitting the child to progress in the targeted areas of development. The 58-competency base undergirding these materials was established through an extensive empirical analysis of young children's development (see AEL's *A Competency Base for Curriculum Development in Preschool Education*).

The role of the home visitor is observing the child, recording behavior, planning with a classroom teacher or other supervisor for areas in which the child is ready to learn, and selecting activities from the file to demonstrate to the parent or to leave with the parent to use with the child. The home visitor typically will visit the home or talk by phone once per week. The parent works with the child on a daily basis, using the learning activities. The child learns by active participation in the activities themselves. The child's progress can be charted in terms of the competencies.

SUBJECT AREA(S)

The subject area is a comprehensive set of learning activities for home use with 3- to 5-year-old children.

INTENDED USERS AND BENEFICIARIES

Home visitors and parents of 3- to 5-year-old children are the intended users. Children are the beneficiaries.

GOAL(S) OR PURPOSE(S)

The purpose of the product is to support the home visitor's selection and demonstration of learning activities and to aid parents in using these learning activities which fit the learning characteristics of the individual child.

PATTERNS OF USE

The learning activities are flexible enough to permit individualized planning for each child. The program follows a child developmental pattern within each competency area.

ASSESSMENT PROVISIONS

Not provided. Sample prototypical evaluation items are available for each competency. The preparation of the complete child evaluation instrument was not funded during 1975; this work will be carried forward in 1976 if funding is secured.

IMPLEMENTATION PROCEDURES

Use of the product is predicated on a school system's organizing itself to conduct a home visitor program.

MATERIALS AND EQUIPMENT

The price of the activities cards and a small accompanying booklet is not yet available, since development and production are still in progress.

ASSURANCES AND CLAIMS

No assurances and claims can be made at this time, since the materials have not yet been field tested. Every precaution is being taken to insure against sex or race bias or harmfulness. They should be made available for selected experimental use during 1976 to complete determinations regarding assurances and claims.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 050 011

THE SELF-SCHEDULE SYSTEM

An instructional learning-management system to allow children to work on both structured and unstructured learning activities in one classroom setting

The *Self-Schedule System* is an instructional-learning management system designed to implement an instructional program which combines structured individualized learning activities with open-ended exploratory activities. Not only does it allow different children to work on structured and unstructured learning activities at the same time within one classroom, but it also fosters the development of the students' ability to interact with, manage, and control the learning environment. The system is designed with explicit steps to help the students take increasing responsibility for planning and carrying out their own learning activities with a minimum of supervision and direction from the teacher.

Under the *Self-Schedule System*, children pick up their prescribed assignments at the beginning of each activity session (either a 1-day or a 1/2-day) and understand that they must accomplish the prescribed tasks during the course of the session. They may, however, work on the tasks in any order they choose. Under this system, at any given time children can be found working in virtually every area of the classroom, with the teacher circulating among them. Small groups of children can be called together for group activities—for example, a group reading lesson—whenever the teacher wishes. Children can also form groups on their own for exploratory games or other activities. When the group session is over, children can return easily to their previously interrupted activities or to new ones.

The teacher's role involves guiding and providing proper environmental support for the student. These functions are critical to the successful operation of the system. The "how to" aspects of carrying out the teacher role are provided in a detailed teacher's manual.

SUBJECT AREA(S)

Since the *Self-Schedule System* is an instructional-learning management system, it does not include a curriculum, but rather is a means of implementing the various curriculum components in an integrated and complementary fashion in classroom settings. As the system is implemented, the student is provided with the opportunity to develop the competencies required to plan for, and to manage increasingly greater portions of, the classroom day.

INTENDED USERS AND BENEFICIARIES

The system is designed for use in classrooms implementing educational programs aimed at adapting to individual students. Although the system was designed for use with the *LRDC Early Learning Program*, its potential usefulness is not restricted to any grade level nor to any particular instructional model.

GOAL(S) OR PURPOSE(S)

The system is specifically designed to facilitate the achievement of the goals of the *LRDC Early Learning Program*. Specifically, it has as its aim to provide the student with opportunities: (1) To acquire and use the skills included in the various basic prescriptive and exploratory learning components in a variety of contexts which cut across formal curriculum boundaries, so that the student can learn to make connections, integrate the acquired competencies, and apply them in practical situations; (2) to experiment with a variety of learning activities and materials; (3) to gain firsthand experience in making individual decisions on the type of learning tasks to be worked on and in adopting the approaches to learning that seem most interesting and gratifying; (4) to experience success and failure in a variety of learning activities under varied learning situations; (5) to select, structure, and define the tasks in an individual way; (6) to evaluate learning outcomes with minimum assistance from the teacher; (7) to work with peers in developing cooperative plans to achieve a common goal; (8) to experience spontaneous interaction with peers and to acquire mastery of certain social skills necessary to adjust and adapt in the social environment; and (9) to acquire the independent and self-directed learning skills that are necessary to function in a classroom operating under an individualized instructional model.

PATTERNS OF USE

The system is implemented through a series of hierarchically arranged behavioral objectives. The arrangement of the behaviors in the hierarchy represents student behaviors requiring increasingly greater responsibility for planning daily classroom activities. Over a period of several weeks at the beginning of implementation, the student progresses through the hierarchy until the terminal behavioral objectives are achieved (i.e., the student can plan the order of doing prescriptive and exploratory tasks for 1 schoolday and complete all the assigned tasks within that schoolday or for longer time periods). Once the overall classroom pattern of use is established, it is self-sustaining.

It is important to note that, although this program was designed as one of the components of the *LRDC Early Learning Program* and it is strongly recommended that it be used in conjunction with its other components, the *Self-Schedule System* can be used independently.

ASSESSMENT PROVISIONS

Student progress through the hierarchy of management behaviors, specified in the design of the system, is assessed by the classroom teacher through both informal observation and the use of a systematic observational schedule. Students are assessed at each step in the hierarchy before the next step is introduced.

TIME REQUIREMENTS

Classrooms operating under the *LRDC Early Learning Program* have typically been able to establish the system within a 3- to 5-week period. In general, by the end of 3 weeks, students in the 1st and 2d grades have been able to acquire mastery of all the prerequisite steps necessary to function under the system (i.e., to be able to plan and manage their learning for a total schoolday).

IMPLEMENTATION PROCEDURES

No special equipment is required, nor are special organizational requirements necessary to implement this management system. The system has been successfully used with racially and ethnically heterogeneous student populations in both urban and suburban school districts and is suited to many different types of students.

Personnel Required for Product Adoption and Implementation

Implementation of this system ideally requires two adults in each class, a teacher and an aide. However, it can be easily adapted for use in classrooms with only one adult present. Detailed directions for use have been developed and are explicitly stated in the manual. Additional teacher training materials are under development.

ASSURANCES AND CLAIMS

Assurances

This system has been included as a component of the *LRDC Early Learning Program* for the past 3 years. Over this period of time, it has been field tested and used in classrooms of the LRDC developmental schools. No harmful effects have been reported by any of the teachers using the system during this time.

As an instructional-learning management system, this system does not, in itself, include any curriculums. It, therefore, does not contain any material which might potentially show bias in favor of a racial, religious, economic, or age group. Throughout the manual, both "he" and "she" are used instead of the generic "he."

It has been found, from field testing experiences, that this system can be replicated with minimal supervision. The manual contains detailed information and directions for use and is, thus, expected to be highly transportable.

Claims

Several studies have been conducted to evaluate the effectiveness of the system. In general, the data suggest that the system is effective in implementing a combined prescriptive-exploratory individualized instructional program in the early elementary grades and in developing students' ability to take increasing responsibility for school learning as well as their perceptions of self-responsibility for school learning and academic achievement.

The results from the studies consistently support the hypotheses that when students are given the opportunity to take responsibility for their learning, they can develop the ability and the perception of this self-responsibility; and when they are given the responsibility for what and how they learn in school, the students tend to complete more learning tasks in less time.

When compared with a more traditional instructional-learning management system in which all students work on the same activities at the same time under the direction of the teacher, this system has been found to be the more effective one. The system effectively solves the problem of student "waiting" time (i.e., time spent waiting for the teacher to check the student's work before the student goes on to the next lesson), increases the time teachers spend in instructional interactions with the students, and has a variety of positive effects on the behavior of the individual students.

INFANT RATING SCALES FOR USE BY CAREGIVERS IN DAYCARE CENTERS

Eight numeric scaling instruments measuring the psychological characteristics and competencies of infants from 3 to 15 months

Infant Behavior Rating Scales are assessment tools for approximating the development of various infant characteristics and competencies. They were developed based on an assessment of approach-withdrawal, arousal, and pleasure-displeasure responses in infants from 3 to 15 months of age.

The program assesses responsiveness, arousal or activity level, exploratory behavior, and the infant's affective state for the day as a whole, as well as in selected situations. Some of the scales were adapted from procedures developed by Brazelton for assessing newborn behavior, which are already in use in some day nurseries. Procedures developed for implementing these scales have been found to be a good organizing principle for operationalizing individualized care of infants in day-care facilities.

There are eight scales, each with a numbered rating system. The caregiver observes the child, noting different responses on a data sheet and then plotting the data on the rating scale. The titles and content of the scales are listed below:

1. Irritability. This scale gives a summary impression of the infant's fussiness and irritable crying as observed during an observation session.
2. Self-quieting activity. This scale yields a measure of the infant's ability to quiet itself after a period of upset.
3. Social consoling. This scale measures the amount of social soothing required to quiet a distressed, crying, or whimpering infant.
4. Affectivity. This is a 9-point scale ranging from strong negative through neutral to strong positive responses.
5. Affective response to caregiver. This scale is for measurement of the infant's affective reaction to the caregivers.
6. Activity. This scale is for measurement of the infant's activity during the time the infant is awake, including the period just before sleep.
7. Responsivity. This scale reflects the magnitude of the infant's model response to stimuli in the environment.
8. Information-getting activities. This set of scales is for approximating the different components of the infant's typical way of interacting with both the inanimate and social environments.

SUBJECT AREA(S)

Early childhood development: Assessment of infant responses.

Scales for rating "temperamental" characteristics of infants, which can be used either to maintain quality care in a group or to assess individual development of a particular infant.

INTENDED USERS AND BENEFICIARIES

The scales are of value, not only for collecting research data on the behavior and development of infants in different day-care centers, but also in providing important information concerning development of individual infants in a particular program. This information is of practical use to caregivers in their efforts to meet the needs of particular infants; i.e., to individualize the care of infants in day-care facilities. In addition, the scales provide researchers with useful information for tracing major developmental changes in important characteristics of infants, in day-care environments during the 1st year of life.

GOAL(S) OR PURPOSE(S)

The scales are intended primarily to describe such "temperamental" characteristics as responsiveness, irritability, activity level, affective state, along with a number of attentive and motivational characteristics of the infants.

PATTERNS OF USE

The scales are designed to be used in any day-care facility by caregivers with varying degrees of formal background in child development. They are sequential and cumulative.

ASSESSMENT PROVISIONS

Generally speaking, it appears that caregivers with varying degrees of formal background in child development can use the scales successfully to provide useful information concerning the infant's behavior and development. The developer suggests some amount of training be given to caregivers.

TIME REQUIREMENTS

Caregivers usually use the rating scales daily to record observation about the infants. Although frequency of use has varied in several reliability checks, a smaller number of ratings per week was shown to reduce the reliability of the weekly average ratings.

IMPLEMENTATION PROCEDURES

Training of caregivers should begin with discussions of the scales and their purposes and follow through with periodic reliability checks, discussions, and retraining to build up and maintain the consistency with which the rating scales are utilized. Whether such an approach is feasible depends on the flexibility of the caregivers time schedules.

In general, rating scales applied by caregivers should be limited in number but applied frequently. The daily total of different rating scales and rating scale applications required of a caregiver should probably be no more than eight or nine. For the purposes of evaluation and research, these ratings should be made three to five times per week. To maintain interest and accuracy in these ratings, the caregivers should be involved in their construction, collection, and analysis. Feedback to the caregivers on the trends indicated by the ratings and their reliability is important.

The choice of particular ratings to be made is largely a function of the objectives of the center's program. The ratings should be selected to reflect the intended impact of the program within its defined objectives.

Some of the scales which are rather difficult for the caregivers to apply reliably while they are taking care of the infants may be satisfactorily applied by an observer.

MATERIALS AND EQUIPMENT

In addition to the required rating scales, data sheets, and plotting graphs, the developers suggest that at least two caregivers be responsible for a group of infants. Cost estimates are not available at this time.

ASSURANCES AND CLAIMS

The scales have been carefully developed. Previous studies have dealt with the theoretical and methodological issues involved in the assessment of important aspects of infant behavior. That there is a need to assess such aspects of infant behavior has been addressed in several different projects. No evidence exists which suggests that this project may be harmful or socially unfair.

The original set of scales has been in use for more than 2 years in the Cornell infant research program (as of 1974). During this time, some have required only minor revisions while others have undergone extensive modifications.

The scales have demonstrated adequate reliability to be of use in different situations. The choice of the particular rating scale obviously depends upon, and must be made in the context of, the needs and purpose of the investigator. Some ratings can be made adequately over a relatively long timespan such as 3 or 4 hours, while others are better suited for use in short-structured situations of 10-15 minutes. Many of the scales can be applied in both settings successfully.

KRISP—KANSAS REFLECTION-IMPULSIVITY SCALE FOR PRESCHOOLERS

A test instrument which identifies those learning styles of children from ages 3 to 5½ that may handicap later educational development

Some children are exceptionally impulsive when asked to respond; others are more deliberate and reflective in answering. *The Kansas Reflection-Impulsivity Scale for Preschoolers* (KRISP) can assess these opposing cognitive styles in preschool children by means of an individually administered test.

Developed initially as a research instrument, KRISP can be used by teachers of preschool and other child care specialists without formal training in tests and measurements, as well as by psychologists. There are 2 comparable forms for KRISP, each consisting of 5 practice items followed by 10 test items. The test items themselves are sets of pictures; the child must indicate which item in the set is the same as a sample on the facing page. The tester records the time required by the child to make a decision and whether the child's answer is correct.

The user's manual for KRISP contains background information and preliminary normative data on a sample of 307 children to whom KRISP was administered. The manual is written in nontechnical language and format.

SUBJECT AREA(S)

Cognitive style (or tempo) is conceptualized as a dimension along which individuals differ in their typical speed and accuracy of performing tasks on which speed and accuracy are negatively related. The match-to-sample task of KRISP has this property. Those who respond most rapidly tend to make the most errors, and those who respond most slowly tend to make the least errors. Reflection-impulsivity is an individual characteristic somewhere between an intellectual ability, such as might be measured by an intelligence or aptitude test, and a personality trait, such as might be measured on a personality inventory. KRISP is designed to provide the researcher with data on this reflection-impulsivity characteristic.

INTENDED USERS AND BENEFICIARIES

KRISP is intended for use by preschool teachers and other child care specialists without extensive formal training in mental tests and measurements, as well as by psychologists.

The ultimate beneficiaries are children with particular impulsive or reflective tendencies, diagnosis of which can help prevent future educational difficulties.

GOAL(S) OR PURPOSE(S)

KRISP is intended to be useful not to diagnose some permanent incapacity or hidden talent, but to give the user a confirmation or disconfirmation of what may appear rather obvious, namely that a particular child seems unusually impulsive or reflective as compared with peers.

Ideally, of course, one might hope that most children are neither reflective nor impulsive across the board. A better goal might be for a child to discriminate those tasks and settings requiring a reflective approach from those acquiring from a more impulsive style, and to adjust individual behavior accordingly. At the very least, the program hopes to develop in preschoolers a long-enough attention span for them to be able to comprehend and carry out simple instructions accurately, together with freedom of self-expression which permits them to use words, movement, musical sounds, and graphic materials with some fluency, if not artistry.

Thus, the long-term educational goals of KRISP are: (1) To make predictions of children's differential functional effectiveness in different types of tasks and (2) to help preserve the impulsive child's fluency and expressiveness, while enhancing that of the rather cautious, reflective child.

PATTERNS OF USE

The KRISP testing package is sequential in nature. It may be used on a one-time basis only, or administered on separate occasions (with fixed intervals) to provide more complete information on: (1) Trait stability over a year's time, (2) the best possible estimates of a child's "true" score, and (3) indicators of 1st- and 2d-year mean scores for each child. No significant changes in procedure are necessary if KRISP is to be used on a multiple-administration basis (several times over a 1- or 2-year span).

ASSESSMENT PROVISIONS

KRISP is designed to be administered to preschool children between the ages of 3 and 5-1/2. The tester records the child's responses on a scoresheet and then charts the result on a graph; both scoresheets and graphs for different age groups are included in the KRISP manual and the test book.

The final step involves forming a judgment as to whether the label for the graphic region into which a child falls is an appropriate label for the child in question. Considerable caution should be employed in making such judgments. Firm conclusions require consistent supporting data, such as observation of the child and parent reports, and should not be drawn from KRISP data alone. The KRISP manual provides sample interpretations of hypothetical test results as plotted on the trait graphs.

TIME REQUIREMENTS

No specified time requirement is advised. However, certain prompts or stimulus procedures are suggested; if the child gives a wrong answer, the tester repeats the example one or two more times as necessary. If a child fails to select the correct example after three tries, the next example is given.

IMPLEMENTATION PROCEDURES

KRISP is designed to be used by teachers and other child care specialists without extensive formal training in mental tests and measurements. To this end, both the test booklet and the manual provide clear, nontechnical instructions written in an easily readable language and format.

KRISP has been normed and prepared for wider, though still experimental, use. The developer suggests that while a larger number of cases should be tested for inclusion in subsequent norms, KRISP is useful in its present form. The present KRISP norms are based on a generally middle-class population and are otherwise unselected. It will probably prove necessary and desirable to replicate the interim analysis on a larger sample and to extend KRISP data analysis to include regional and international comparisons, as well as demographic contrasts not yet possible with the existing data. KRISP has also been used on a limited, experimental basis with children from "Special Populations" (trainables and educables). Only slight variations in administration procedures are required for use with these populations.

ASSURANCES AND CLAIMS

Assurances

No information exists to suggest that KRISP may be harmful or socially unfair.

Claims

KRISP scores are likely to predict certain habits of thinking in a variety of situations even though the particular demands of the task and situation will, of course, play an important role in how a child performs. Initial norms on the KRISP indicate that females make slightly, but significantly fewer, errors than males and are probably more stable over a 1-year interval. Males show a stronger negative relation between speed and accuracy, but otherwise there are not marked sex differences. The effects of age (cross-sectionally) and practice are readily seen in the form of error reduction, but not as a systematic change in the speed of responding.

Retardates of the same mental age as the norming population respond more impulsively than normals, but degree of retardation appears to make less difference than institutionalization. Home-living retardates appear to develop an especially rapid and error-prone style, while children living in institutions take longer and do better than their home-living peers.

The KRISP appears to be a reliable instrument. Its predicative value has not been adequately tested. KRISP scores at age 3 may not predict KRISP scores at age 4 for boys, but they do for girls. It is hoped that as enlarged norms become available, a clearer picture of its ultimate practical usefulness will emerge. In the interim, it appears to be a useful research instrument.

TEST FOR THE ASSESSMENT OF BASIC SKILLS (TABS) FORM A, FORM B

*An individually administered, domain-referenced
test to measure cognitive skills in children ages
4 and 5*

The *Test for the Assessment of Basic Skills* (TABS) is an individually administered, domain-referenced test designed to measure cognitive skills in 4- and 5-year-old children.

The content surveyed by TABS covers a wide range of preschool skills. However, primary emphasis is on selected skills relevant to the objectives of DARCEE preschool curriculum. DARCEE was developed at the Demonstration and Research Center for Early Education at George Peabody College under the leadership of Susan Gray. The curriculum emphasizes basic-to-learning skills such as colors, shapes, sizes; and visual skills; auditory skills; language development; and small-motor skills, as well as response methods (i.e., matching, recognizing, identifying, and producing).

Alternate forms of the TABS were developed to evaluate changes in cognitive and psychomotor skills of preschool children. Ideally, one form should be administered at the beginning of the school year, the other form at the conclusion of instruction. The test is administered individually in three 20-minute sessions with at least a 1-hour break between each session.

The test is constructed within a domain-referenced framework. The items chosen to assess each category (e.g., color, shape) are one selection of the curriculum content in that domain.

The test is broken down into five content domains: Basic concepts, visual skills, auditory skills, language development, and small-motor coordination. Each of these domains can be analyzed by subscores. The test can also be broken down into five response domains: Matching, recognition, identification, verbal production, and physical production; subscores can be obtained for each.

The test consists of a large spiral booklet and several manipulative materials. For most of the items, the tester asks the child to look at pictures on a page and to either point or respond verbally about what is on the page. The test questions are printed in the test booklet facing the tester. Children's responses are recorded on a separate record sheet. A few items involve manipulative tasks (e.g., tracing a design, cutting out a shape). Equipment for these tasks (e.g., pencil, scissors, needle and thread) must be supplied by the tester. Examiner's manuals are provided for both forms of the TABS. These manuals explain specifically how to conduct the testing sessions, and they give sample correct and incorrect answers.

The TABS (Form A and Form B) were used as primary assessment instruments during the trial installation of prototype DARCEE preschool curriculum and training materials (CEMREL, Inc., Field Test) in 49 classrooms during 1972-73. Prior to that time, TABS had been tested on a small number of children, and certain items were revised. As a result of analysis of data from the 1972-73 trial, it would be possible to further revise and refine the test and to complete the background report on the test's reliability and item validity. Funds for this project have not been available. The test exists presently as two finished forms plus the two examiner's manuals. Computer analysis of the results of testing, although partially completed, has not been compiled into a concise report form.

SUBJECT AREA(S)

Early childhood education: Cognitive measurement instrument

Cognitive skills are assessed in terms of subject matter domains and methods of response.

INTENDED USERS AND BENEFICIARIES

Although TABS is primarily focused on kindergarten (or 4- and 5-year-old) children, it has had limited usefulness with children as young as 3 years of age.

RD 050 014

GOAL(S) OR PURPOSE(S)

The goals of this product are to provide an objective test of the achievements and cognitive gains in children brought about by the DARCEE preschool curriculum as measured against its stated instructional objectives and (2) to devise a general-purpose test of preschool skills which include several response methodologies to assess achievement.

PATTERNS OF USE

Test for the Assessment of Basic Skills can be given at the beginning and end of a school year to assess children's achievement. TABS also can be used diagnostically to determine areas in which children need extra instruction. Any program wishing to assess the skills tested by TABS can find the test useful.

ASSESSMENT PROVISIONS

By scoring the TABS on optical mark scoring sheets, it is possible to analyze results quickly by computer, and to obtain subscores for each child for each content area and response method. This information can be obtained more laboriously by teachers themselves using the categorization of items by content domain and response method included in the user's manual. The complete user's manual for each form of TABS assures that testers will apply consistent standards and conditions in the test situation and will use the same criteria to score answers.

TIME REQUIREMENTS

The test is administered to each child in three 20-minute sessions, with at least a 1-hour break between each section. Normally, items 1-80 are completed during the first session; items 81-140, during the second session; and items 141-160 during a final session.

IMPLEMENTATION PROCEDURES

In the DARCEE Field Test, testers receive approximately 2 hours of training prior to administering the test. The training consists of reading the users manual and being introduced to the TABS by a trained DARCEE researcher. This training could be modified by having the tester read the examiner's manual. Enough testers are needed so that all children in a group are at approximately the same point in the instructional year. The test is normally administered in a quiet room, isolated from the regular classroom.

ASSURANCES AND CLAIMS

Assurances

The TABS has been used in a variety of urban and rural situations with white, black, Puerto Rican, and Indian children. The developers have not received any reports of harm associated with the use of this product. Test items have been carefully scrutinized for social or geographical bias, ethnic or sexual stereotyping, and inappropriateness of content. Analysis of the validity of test items has led to revision or deletion of items where necessary.

Claims

TABS was compared to the Boehm Test of Basic Concepts, a published instrument designed to measure concepts considered necessary for achievement in the first years of school, and to eight other commercially available tests. The purpose of the comparison was twofold: To assess the appropriateness of TABS to the DARCEE program's objectives and to determine the reliability and applicability of TABS as a general test for preschool audiences.

TABS was found to have very high overall test reliability and to be correlated highly with the Boehm Test ($r=0.71$). TABS covered all 29 separate areas of DARCEE objectives, which is more than twice as many as any other of the tests listed. In addition, TABS was shown to include a greater variety of subject matter areas and a much greater choice of response methodologies than the comparison tests. These features would seem to make the TABS test applicable to many preschool programs and its breadth of coverage unique among the preschool tests surveyed.

A COMPETENCY BASE FOR CURRICULUM DEVELOPMENT IN PRESCHOOL EDUCATION

A four-volume report defining child competencies and behavioral objectives for early childhood curriculum developers

A four-volume report comprises the competency base. These volumes report the research which defined the competency base (volumes I-III) and develop this into a comprehensive set of terminal behavioral objectives for the end of the preschool period, 72 months of age (volume IV). This does not yet represent a final product, but it is usable in its present form by early childhood curriculum developers who are concerned either with the design of the research or with the competency base itself.

The research was conducted using a national panel and an Appalachian panel of child development scholars. These panels judged the applicability of a set of general child developmental competency statements (goals) to children by age 72 months. They further judged specific behavioral examples of these competencies. More specific "performance statements" and "criterion statements" were developed for 32 developmental competencies on which the panels were essentially agreed as to their reasonableness and attainability. The criterion statements amount to behavioral tests of the competencies. The performance statements provide a level of description intermediate in specificity to the criterion statements and the competency statements. A final study asked a panel of more than 900 Appalachian parents to judge a parallel set of statements which were stated in more behavioral terms. There are some problems regarding the match of these statements to the 32 competencies. However, to the extent that the match has been found satisfactory, it is possible to conclude (within the limits of the direct questionnaire method employed) that Appalachian parents' expectancies of their own preschool children correspond to those of the two panels of child development scholars.

Further work, based on the original competency-based study, has sought to extend it via performance and criterion statements to an additional 26 early childhood competencies, using literature search rather than judgmental methods. A second extension has used the competency base to identify learning activities which might foster each competency at 3, 4, and 5 years of age. A further extension has been designed to answer the question of which competencies should receive greater emphasis at 3, 4, and 5 years of age. Age in all of the extensions of the original competency base has been used to mean developmental age rather than chronological age. These extensions will not be available for dissemination in the current year, except to qualified researchers. They should become available during 1976, completing the competency base as 58 early childhood competencies with performance and criterion statements (to determine whether they are present) and with learning activities appropriate to fostering children's progress in each competency area at their developmental ages. Curriculum developers and other early childhood practitioners will be the principal users of both the presently available and future products.

SUBJECT AREA(S)

The subject areas are early childhood education; specifically, child competencies and behavioral objectives.

INTENDED USERS AND BENEFICIARIES

Only curriculum developers can be expected to use the current product. Curriculum developers and other early childhood education practitioners will be able to use the final product.

GOAL(S) OR PURPOSE(S)

The product's purpose is the creation of an empirical competency base for curriculum development in early childhood education.

PATTERNS OF USE

Researchers will use volumes I-III. Curriculum developers will use volume IV primarily.

ASSESSMENT PROVISIONS

There are no assessment provisions.

RD 050 016

A GOOD BEGINNING FOR BABIES: GUIDELINES FOR GROUP CARE

Guidelines for maintaining quality group care for infants during the 1st year of life

This manual presents the results of efforts to conceptualize more systematically and explicitly the essential features of a "quality" group-care environment for infants in the first year of life, in the form of a statement of principles, guidelines, and procedural suggestions.

The overall approach in formulating this statement has been to develop and maintain a quality group-care environment in a small experimental nursery and to test and refine these guidelines.

The major approach of this program is to try to make explicit for caregivers a set of guiding principles concerning infant care, with many concrete illustrations.

The guidelines include: (1) Statement of goals and principles, (2) importance of maintaining a close relationship between group-care programs and the families they serve, (3) organization of the program and staffing, (4) program content and operation, and (5) functional arrangement of physical facilities.

SUBJECT AREA(S)

Early childhood education

This manual discusses infant care during the first year of life and provides detailed consideration of sensitive caregiving practices likely to facilitate the development of infants' intellectual, social, and motor competencies.

INTENDED USERS AND BENEFICIARIES

The manual was written primarily for use by day care center program directors, those people in charge of maintaining program quality and training staffs. However, some parts of the manual will be useful if read and discussed by caregiving staffs.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To provide guidelines for creating and maintaining group-care environments for infants; (2) to emphasize that caring for infants in a group setting is an exciting, pleasurable, challenging, and complex job; (3) to make explicit for caregivers a set of guiding principles concerning infant care; and (4) to create an awareness that there are still many questions to be explored and answered concerning infant group care.

PATTERNS OF USE

The manual is intended to be of practical assistance primarily to those people most directly concerned with establishing and maintaining developmentally facilitating group-care environments for infants under 12 to 15 months of age, either in center- or family-based care settings.

ASSESSMENT PROVISIONS

There are no formal testing procedures for those who read this book, but seven checklists are provided for the caregivers to use in caring for and evaluating each child in their care. The checklists, called the Cornell Infant Rating Scales, are discussed in a product description entitled *Infant Rating Scales for Use by Caregivers in Day Care Centers.*

TIME REQUIREMENTS

A Good Beginning for Babies is resource material for program directors and caregiving staffs. It can provide a complete schema for implementing an infant care facility, or it can serve as a reference for an already-established program.

IMPLEMENTATION PROCEDURES

If one is to put into operation a program as described in *A Good Beginning for Babies*, there are a few things that need to be considered.

The training of staff is crucial to the success of the project. The training must be a continuing process, not an intensive series of workshops that happen at the beginning of a project or once a year. New caregivers should be hired for a trial period of apprenticeship which may last for several months. The number of staff members and the physical facilities will depend on each particular situation.

The manual should be seen not as a "how-to-do-it" book, but rather as a beginning point for creative caregiving.

ASSURANCES AND CLAIMS

Assurances

This material records the experience and procedures used at the Cornell Experimental Infant Nursery to provide high-quality developmental care for young children. Every effort has been made to insure that social or racial bias and ethnic and sexual stereotyping are not present in these materials. The experimental nursery was developed primarily to do research on babies under 14 months old. It was primarily a research laboratory for developing caregiving procedures and observational studies of very young infants. Therefore, no assurance can be made about the replicability of the procedures outlined in the report because they were not installed in situations outside the Cornell Nursery site.

Claims

No specific evaluation was conducted of the procedures used and recommended in *A Good Beginning for Babies*.

The guidelines, principles, and procedures suggested are based upon observation of caregivers by researchers at the Cornell Nursery. An accompanying technical report summarizes many of the findings which led to the suggested procedures.

INTRODUCTION TO EARLY CHILDHOOD EDUCATION (PART OF THE FLEXIBLE LEARNING SYSTEM)

A teaching manual that explains responsive education to teachers

This learner's unit is designed for coordinators of Far West Laboratory's Responsive Program (REP) and is part of the *Flexible Learning System.* It is intended to guide program advisers in helping teachers, teacher trainees, and administrators to become familiar with the goals and purposes of the REP.

More than any other unit in the *Flexible Learning System,* this is an explicit teaching manual. It contains theory, background information, and explanations as well as study discussion questions, learning-oriented activities, and numerous quizzes and pretests. In brief, this unit is intended to be a complete guide to teaching teachers—and other adults involved with early childhood education—how to teach young children through responsive education.

The unit details responsive education in terms of its objectives, procedures, rules, trainer role, and materials. It directs the program advisers in the most effective ways to communicate their understandings to adult learners. It holds that only by actively administering this unit can advisers become sufficiently familiar with the REP to work effectively within their capacity and it provides explicit instructions for the advisers' teaching preparations.

SUBJECT AREA(S)

Early childhood education.

INTENDED USERS AND BENEFICIARIES

The intended users of this unit are program advisers to the REP. Secondary users are the teachers, teaching assistants, and administrators who will take the course. The eventual beneficiaries of the unit are all these adults and the children whose education they supervise.

GOAL(S) OR PURPOSE(S)

To teach program administrators in the REP how to help other adults, who are involved with early childhood education, to learn goals and methods of the REP program.

PATTERNS OF USE

Cumulative and sequential, except that provision is made in the unit for learners to bypass material they already know and for which they can demonstrate their knowledge through pretests.

ASSESSMENT PROVISIONS

Numerous test questions and exercises are posed for the learner who is encouraged to answer them and compare responses with those suggested in the unit, in a self-evaluation format. Provision is made for outside evaluation by a qualified person from the Far West Laboratory for Educational Research and Development.

TIMF REQUIREMENTS

Time requirements vary from teacher to teacher.

Other specific materials are suggested to fit individual learning centers. The unit provides suggestions and alternatives and holds that no materials should be used in the learning centers which are not available or cannot be substituted in the real classroom. Suggestions include articles and pamphlets on the REP, filmstrips, cassette tapes, language master with notched cards, eight basic toys of the REP, and refreshments.

ASSURANCES AND CLAIMS

Field testing is continuing and will be completed by November 1975.

UNDERSTANDING AND ASSESSING THE INTELLECTUAL DEVELOPMENT OF YOUNG CHILDREN
(PART OF THE FLEXIBLE LEARNING PROGRAM)

Handbooks and video tapes to acquaint teachers of children from ages 4 to 8 with Piaget's theory of mental development

This unit is presently under development as part of the *Flexible Learning System.* It is intended to acquaint early childhood educators with Piaget's theory of mental development and provide instruction on the methods of assessing children's cognitive growth in four domains: Classification; order relations (e.g., seriation); quantitative relations (e.g., number concepts and measurement); and understanding of spatial relations.

The development of the units is founded on the underlying assumption that educators who are acquainted with developmental theory and the cognitive skills of their own children will be: (1) Better able to relate educational experiences to each child's level of development, (2) less likely to devote energy to teaching skills that are known to emerge through the natural progression of mental development, (3) more likely to adopt an educational perspective that values the child's active use of intellect, and (4) able to adopt an approach to child-assessment that focuses on the nature of the child's thinking rather than specific factual or skilled knowledge.

The unit will consist of four 30-minute color video tapes, each focusing on the theoretical and developmental aspects of four intellectual domains. Each film will be accompanied by a written handbook consisting of: (1) A theoretical understanding of the topic (e.g., classification) and its relation to mental development between 4 and 8 years of age (this paper will be closely tied to the film), (2) a description of methods and materials for assessing children's development in each area of cognitive growth, (3) a set of paper-and-pencil exercises to personalize the learner's understanding of the theory and practice and to provide feedback on the learner's understanding of the content, (4) a set of assessment activities designed to acquaint the learners with the intellectual development of the children they are working with, (5) a theoretical discussion of the implications of cognitive development for educational practice, and (6) an annotated bibliography providing references for future studies of the theory and practice.

SUBJECT AREA(S)

Subject areas include understanding and assessing the cognitive development of children between 4 and 8 years of age.

INTENDED USERS AND BENEFICIARIES

The intended users are all people who are working directly with children and early childhood educational settings.

GOAL(S) OR PURPOSE(S)

The major goal of this program is to provide early childhood educators with an understanding of Piaget's theory of intellectual development and the application of that theory to assessing children's growth.

PATTERNS OF USE

Each of the four video tapes and companion workbooks could be used independently and in a preferred sequence. However, a sequence is recommended, and the effects of the sequence should be cumulative.

ASSESSMENT PROVISIONS

Each handbook will contain a number of problems and knowledge questions. Answers will be provided. These questions will be used for self-assessment by students and/or as a vehicle for feedback to the trainer.

TIME REQUIREMENTS

Eight weeks of inclass instruction, or 16 hours, is required. Fieldwork and homework reading assignments will require an additional minimum of 8 hours.

IMPLEMENTATION PROCEDURES

The unit is intended to be used as part of inservice or preservice training, ideally in the context of an 8-week course in which a number of learners have the opportunity to discuss the materials and their field experiences.

The instructor should be familiar with early childhood education and should have some familiarity with Piaget's theory and the administration of Piagetian tasks.

Learners must have access to children in the 4- to 8-year-old range and, ideally, should have access to the children for the duration of the training.

ASSURANCES AND CLAIMS

Field testing will be completed by November 1975, at which time assurances and claims can be made.

MATERIALS AND EQUIPMENT

DEVELOPING CHILDREN'S CLASSIFICATION SKILLS (PART OF THE FLEXIBLE LEARNING SYSTEM)

A guide for teaching those working with preschool children about concept formation

Developing Children's Classification Skills is designed for use by teachers and teaching assistants of preschool-age children. The unit is intended to help teachers arrive at an understanding of "concept formation" in a way that will permit them to apply their understanding to their teaching situations and thereby help children develop their own abilities to recognize and comprehend "concepts."

Since concept teaching relies heavily on language, the guide urges extensive verbalization with children such as naming, describing, expressing, and explaining. In this way the child develops a meaningful vocabulary.

The guide is structured so that the teacher can learn much of the material at the teacher's own speed. A pretest section allows teachers to determine what their real needs are within this framework. Each subsection of the guide explains its intentions and approach and then allows the teacher-learners to apply what they have learned in the classroom situation. Following each specific learning experience, the guide provides a quiz to allow the learners to evaluate their preparedness to continue in the study.

SUBJECT AREA(S)

Class concept formation is the subject area.

INTENDED USERS AND BENEFICIARIES

The intended users of this guide are teachers and teaching assistants of preschool-age children.

GOAL(S) OR PURPOSE(S)

The goal of the guide is to teach people who work with preschool-age children about concept formation in such a way that they can apply their learning to their classroom situation and thereby help young children develop their own abilities and comprehend concepts.

PATTERNS OF USE

The guide gives the teacher-learner the freedom to bypass the sections that concern knowledge already in the teacher-learner's possession by providing a pretest section for self-evaluation. It also allows the learner to work at an individual speed. As a result, the use pattern is cumulative but is sequential only within the limits of the learner's own needs.

ASSESSMENT PROVISIONS

The guide contains a regular series of review questions which the learner answers for both self-evaluation and evaluation by an adviser or trainer in the course of study.

ASSURANCES AND CLAIMS

Field testing will be completed by November 1975.

RD 050 019

RD 050 020

ENRICHING LITERATURE EXPERIENCES FOR YOUNG CHILDREN (PART OF THE FLEXIBLE LEARNING SYSTEM)

A two-volume unit to guide teachers in teaching literature creatively to children from ages 4 - 8

Enriching Literature Experiences for Young Children is a two-volume unit. The first volume is the learner's guide, designed for use by adults (hereinafter referred to as teachers) who teach or work with children approximately 4-8 years of age. The second volume, use of which presupposes familiarity and experience with the first volume, is designed to be used concurrently with volume 1, by instructors of teachers.

The purpose of volume 1 is to facilitate an experimental method of approaching, learning, and teaching children's literature in a creative manner and as a creative force. The ultimate aim is to expand children's imaginative and vicarious experiences in learning so that they develop positive self-concepts.

The purpose of volume 2 is to enable an instructor, who already understands the methods and intents of volume 1, to teach the approach to others who are involved with children.

This unit operates on the expressed theory that there is no single "right way" to teach children's literature; whatever method is used should engender maximum growth and creative expression in each individual student. It then sets up representative guidelines for understanding one particular way in which these expressed goals may be attained, stating repeatedly that the unit is not to be taken as strict policy, but that it is merely an exemplary model on the basis of which teachers may—indeed, should—evolve their own specific approaches. The unit recommends that teachers take into account such variables as: Who the teachers are and what their backgrounds are; who the students are and what their specific backgrounds are; and what the students' innate capacities are for approaching and dealing with literary experiences.

After an overview, volume 1 begins a teacher's own experiences with, and own attitudes toward, children's literature. The volume proceeds with methods for: Selecting and evaluating children's literature for classroom use; planning classroom reading sessions, encouraging active participation by children in reading, and thinking about and responding to literature; and evaluating and applying what the teachers have learned to their own experiences.

In brief, this product is directed toward education as a growth process through children's literature. Its intent is to educate teachers to maximize their capacities to teach and, subsequently, to educate children to maximize their own evolving capacities to think, grow, and develop a positive self-concept by experiencing literature.

SUBJECT AREA(S)

The subject area is children's literature.

INTENDED USERS AND BENEFICIARIES

The users are teachers and teaching assistants of children (ages 4-8).

GOAL(S) OR PURPOSE(S)

The goals of this guide are to educate teachers and teaching assistants to use children's literature as a means of fostering positive self-concepts and to encourage children to utilize their imaginative and cognitive abilities toward the end of maximizing their growth through a vicariously broadened experiential base.

PATTERNS OF USE

The product is sequential and cumulative.

ASSESSMENT PROVISIONS

Specific activities provide frequent opportunity for self-evaluations. Since this unit is designed for use in a group with an instructor, learner evaluation is an ongoing part of the instructor's activities.

TIME REQUIREMENTS

The time required is 8-10 weeks, or 24-30 hours. A 2-day training workshop is required of trainers.

ASSURANCES AND CLAIMS

Field testing of this unit has been conducted in Honolulu, Hawaii. Data are currently being analyzed. A field research study is also currently underway to investigate the effects of training on teacher performance in the classroom. Paper-and-pencil and observation instruments are used as indexes of teacher competence.

RD 050 021

DEVELOPING CHILDREN'S SENSE PERCEPTION (PART OF THE FLEXIBLE LEARNING SYSTEM)

A two-volume unit for teachers of children from grades pre-K to 3 to increase teachers' understanding of sense perception

This two-volume unit contains a learner's guide and an instructor's guide. The learner's guide is intended for teacher and teaching assistants of young children (preschoolers through 3d graders). It is designed to expand those teachers' understandings of sense perception expressly in order that they might better know how to encourage their students to utilize and maximize their own developing sense awarenesses as informational "take systems." The instructor's guide is intended for use by an instructor of such teachers and presupposes a familiarity with the learner's guide.

The unit operates on the theory that there is no single "right way" to teach the use of the senses; by paying attention to them and exercising them, it is possible to gain a clearer and more complete understanding of the world—whatever that may mean to any particular child or adult. The unit encourages teachers, working alone and in small groups, to practice sense perception in ways that will enable them to assist children in developing their own potentials with regard to their senses.

The unit details exercises for isolating one sense from the others as a method of learning by focus. For example, it teaches the learning of touch by sorting sandpaper according to grades of roughness without looking at the sandpaper.

The learner's guide provides 18 pages of overview for the learning teacher, followed by individual chapters on touch, smell and taste, hearing, and sight. Each sense-oriented chapter provides a section on objectives for the learner, an overall plan to approach learning and teaching the use of a particular sense, and a series of exercises and related learning and teaching devices. The unit is written in an easily accessible style and in such a way that the theory behind each progressive chapter can be used to understand, learn, and teach each succeeding chapter.

SUBJECT AREA(S)

The subject area is sense perception.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and teaching assistants of preschoolers through 3d-grade students. The intended beneficiaries are both teachers and their students.

GOAL(S) OR PURPOSE(S)

The goal of this product is to teach teachers how to use and teach the use of the human senses.

PATTERNS OF USE

Theoretically, the content of the chapters which follow the introductory ones could be presented in any order. However, the unit is written in such a manner as to strongly encourage a progressive approach from the beginning to the end of the unit. Units are sequential insofar as they are cumulative.

ASSESSMENT PROVISIONS

Each chapter concludes with a checkup whereby the learners can test their understanding of the material most recently covered. Learner evaluation is also an ongoing part of the instructor's activities.

TIME REQUIREMENTS

The time required is 6-8 weeks or 18-24 hours. A 2-day training workshop is required of trainers.

ASSURANCES AND CLAIMS

A field-test study to determine the effect of training on teacher performance in the classroom is currently underway. The study will also examine the convergent validity of paper-and-pencil and performance measures as indexes of teacher competence.

MATERIALS AND EQUIPMENT

RD 050 022

HELPING CHILDREN DEVELOP HEALTHY SELF-CONCEPTS (PART OF THE FLEXIBLE LEARNING SYSTEM)

A learner's guide for teachers of children from grades pre-K to 3, discussing methods that can be used by a teacher to help promote healthy self-concepts in children

This unit is designed for teachers and teaching assistants of preschool to 3d-grade children (3- to 8-year-olds). The unit defines a self-concept as to what persons see about themselves and what persons feel about what they see. It defines a healthy perspective on a self-concept as seeing the facts about oneself "as they really are," liking the good points, and disliking but accepting the bad ones. It defines an unhealthy self-concept as exaggerating who the persons feel themselves to be, either by seeing themselves as superior or inferior to the reality.

The unit encourages teachers to give support and guidance to children who are still developing the most basic facets of their self-concepts. The author's research indicates that children with healthy self-concepts are more likely to learn and grow into adults "who can deal with everyday problems of living and not just with reading and mathematics," than children with unhealthy self-concepts.

The learner's guide suggests and discusses methods by which teachers can learn to provide the support and guidance children need in order to grow in such a manner. It provides suggestions for teaching practices directed toward this end, as well as for changing negative situations into positive ones. It also explains methods by which teachers can judge learning situations to ascertain the most fruitful approaches to encouraging healthy self-concepts among children.

In addition to the functional section of the guide, it also includes three appendixes, or "resource booklets." The resource booklets are intended to amplify both the philosophy behind the unit and the exercises and experiences it suggests. The resource booklets contain discussion guides, rewritten versions of formal examples from the main part of the unit, and articles relevant to understanding the idea of self-concept.

SUBJECT AREA(S)

The subject area is evolving self-concepts in young children.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and teaching assistants of preschool and 3d-grade children. The intended beneficiaries are these adults and, subsequently, the children they teach.

GOAL(S) OR PURPOSE(S)

The goal of this unit is to instruct adults who deal with young children in educational systems in understanding the idea of "self-concept," the distinction between a healthy self-concept and an unhealthy one, how this distinction applies to young children whose self-concepts are still formative, and how to apply their understandings to help those children evolve healthy self-concepts.

PATTERNS OF USE

The product is cumulative and sequential except for the resource booklets which are used with specific sessions as indicated in the unit.

ASSESSMENT PROVISIONS

The learner's guide provides suggested answers to the questions it poses. The learners are encouraged to compare their responses with those suggested in the unit. The unit makes it explicit that answers need not agree but when they do not, the learners should understand how and why they disagree. The unit is structured so that it can be used alone, with a partner, or in a small group. If used with a partner or small group, comparison and discussion of answers to the unit's questions are encouraged.

TIME REQUIREMENTS

The time required is 1 to 1-1/2 hours for each of eight sessions (8-12 hours) over a period of 6 to 8 weeks. A 2-day training workshop is required of trainers.

MATERIALS AND EQUIPMENT

OBSERVING AND EXTENDING CHILDREN'S PLAY ACTIVITIES (PART OF THE FLEXIBLE LEARNING SYSTEM)

A learner's guide for teachers of children from ages 4 to 8 focusing on the importance of play to a child's growth and development

Observing and Extending Children's Play Activities is intended for teachers and teaching assistants of children ages 4-8. It focuses on "the importance of play to a child's growth and development and the various roles a teacher may exhibit in relation to play."

The overriding philosophy of this unit is that children learn best when doing what they most want to do and that by observing how children play and with whom or what they choose to occupy their "free-play time," it is possible to extend play activities to include more complex learning processes.

The unit strives to instruct teachers on the importance of children's play by (1) using observations of children's behavior patterns during spontaneous play, (2) deciding when and how to add outside resources to enrich children's play experiences, (3) determining when and how to intervene to adapt the play situation to a concrete learning experience, and (4) structuring the classroom to focus play experiences on a specific idea or set of ideas.

The unit provides explanations of its major concepts and sets of activities through which the ideas can be studied, understood, and implemented.

SUBJECT AREA(S)

The subject area is children's play.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and teaching assistants of children ages 4-8. The intended beneficiaries are those teachers and their students.

GOAL(S) OR PURPOSE(S)

The goal is to instruct teachers and teaching assistants of young children about the real meaning and benefits of children's spontaneous, self-determined activities.

PATTERNS OF USE

The use pattern is cumulative.

ASSESSMENT PROVISIONS

The guide provides specific activities which entail reviewing the concepts presented. Much of the learning process is observational, with embedded feedback mechanisms.

TIME REQUIREMENTS

Time required is 6-8 weeks or 12-16 hours of instruction with a 2-day training workshop for trainers.

ASSURANCES AND CLAIMS

Field testing of this unit is currently underway in Honolulu, Hawaii, and New York, New York.

MATERIALS AND EQUIPMENT

RD 050 024

PROBLEM-SOLVING WITH YOUNG CHILDREN (PART OF THE FLEXIBLE LEARNING SYSTEM)

A two-volume unit to help adults working with children from ages 4 to 8 set up a problem-solving classroom setting

This two volume unit in the *Flexible Learning System* is designed to help adults who work with young children ages 4-8 to develop competencies needed to set up a problem-solving classroom climate. The unit is concerned with teaching such adults how to encourage independent problem solving among their students. For the purpose of the guides, problem solving is defined as: Identifying problems; executing a creative search for solutions; interacting with others and their problems in a manner which allows them to feel respected, valued, and understood; applying prospective solutions; and evaluating results.

The unit is intended for use by two or more persons in a group. The learner's guide is accompanied by the instructor's guide.

The learner's guide contains activities for learning the unit's skills, as well as explanations of the nature of specific kinds of problems, and analysis sheets for the learners to evaluate what is being taught, and to evaluate their own responses to the material. The learner's guide approaches educating teachers in much the same way it approaches having teachers educate children. Its philosophy is that knowledge which is meaningless in a learner's real-world context has little value to the learner and will soon be forgotten unless some meaningful connection can be drawn between the theoretical problem and the learner's experience. Therefore, part of the problem-solving approach utilized by this unit includes determining the realtiy of problems. Another part of it consists of making problems (and the search for solutions to them) relevant to the learner.

SUBJECT AREA(S)

The subject area is problem solving.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and teaching assistants of children from preschool through 3d grade. The intended beneficiaries are both those teachers and their students.

GOAL(S) OR PURPOSE(S)

The goal of this product is to teach teachers and teaching assistants a creative approach to helping young children learn to recognize and solve problems.

PATTERNS OF USE

The unit is sequential and cumulative.

ASSESSMENT PROVISIONS

Each of the eight activities contained in the unit is accompanied by a learner's worksheet or group of such worksheets. Some of these worksheets provide effective posttests for the learner. Learner evaluation is also an ongoing part of the instructor's activities.

TIME REQUIREMENTS

The time required for this product is 20-24 hours or 8-10 weeks of instruction. A 2-day training workshop is required of trainers.

ASSURANCES AND CLAIMS

Field testing on this unit was conducted in Oakland, California and Milwaukee, Wisconsin. A total of 59 learners took part in the field test. The results showed significant pretest/posttest gains for learners.

TEACHING CHILDREN TO INTEGRATE LANGUAGE EXPERIENCE (PART OF THE FLEXIBLE LEARNING SYSTEM)

A unit for teachers of grades pre-K to 3 to create a responsive language program for and with the children

This is a two-volume unit in the *Flexible Learning System.* The first volume is the learner's guide intended for use by teachers and teaching assistants of children from preschool age to grade 3. The second volume is the instructor's guide intended for use by the instructor of such teachers.

The intention of the unit is to enable teachers of young children to create a responsive language program for and with their students. The unit defines a responsive program as one in which the teacher makes use of children's own experiences in order to help them hear and understand what they are saying themselves, before burdening them with concepts beyond their grasp. In this regard, it encourages teachers to make use of children's sensual experiences, backgrounds, lifestyles, games, and languages. An important facet of the unit's philosophy is that teaching language in an integrated fashion means bridging the gap between what is already familiar and what is as yet unfamiliar to children.

The unit is structured in two parts. The first part pertains specifically to listening and teaches the learner to help young children relate to the language they themselves already create and speak. The second section, which presupposes familiarity with the first, concentrates on actually teaching language skills in an integrated fashion, utilizing fantasy, movement, and art with prereading, reading, writing and oral languages. Each of the two sections contains activities for the learner to perform both in and out of the classroom, and evaluation forms so that the learner may continually check personal progress through the course.

SUBJECT AREA(S)

The subject areas are language arts and teacher training.

INTENDED USERS AND BENEFICIARIES

The intended users of this guide are teachers and teaching assistants of children from preschool to 3d grade. The intended beneficiaries are these same teachers and their students.

GOAL(S) OR PURPOSE(S)

The purpose is to instruct teachers and teaching assistants of young children in a method of teaching language skills which will be meaningful to children because it is integrated into their own lives in ways they can perceive and comprehend.

PATTERNS OF USE

The activities are sequential and cumulative.

ASSESSMENT PROVISIONS

Since this is an activity-oriented unit, the results of each activity provide a measure of regular self-assessment which is both implicit and explicit. In addition, the unit contains assessment forms for use periodically throughout the series of activities. Finally, since this unit is to be used with an instructor, there are regular assessment exchanges between the instructor and the learner.

TIME REQUIREMENTS

Eight weeks, or 16 hours of instruction, plus a 2-day training workshop for trainers.

ASSURANCES AND CLAIMS

Field testing of this unit has been completed in Honolulu, Hawaii; data are currently being analyzed.

USING TOYS AND GAMES WITH CHILDREN (PART OF THE FLEXIBLE LEARNING SYSTEM)

A two-volume unit to teach adults working with children from grades pre-K to 3 how to use toys and games to help children acquire cognitive skills and develop a healthy self-concept

This is a two-volume unit in the *Flexible Learning System.* The first volume is designed for use by teachers and teaching assistants of preschool through 3d-grade children. It is comprised of two sections. The first provides an overview of the unit and details the use of eight instructional toys. The second volume offers directions for the use of an additional nine toys with older children (5-6 years old). The second volume is designed for use by an instructor in this unit and presupposes a familiarity with the first volume. It contains philosophical and background material for the unit, including instructions for use by the instructor, such as where and how to obtain games used in the unit and how to conduct training sessions.

The purpose of this unit is to teach adults who work with young children how to use toys and games in order to help children acquire cognitive skills and develop a healthy self-concept. It is the unit's intention to teach this material by instructing the learners in the use of eight basic and nine supplementary toys and games. Each of the 17 toys and games includes several ways of teaching. All the toys and games are designed to encourage the children's awareness that learning is and can be a pleasurable experience. Furthermore, the toys and games are designed with self-corrective features to provide opportunity for discovery learning and immediate feedback.

SUBJECT AREA(S)

The subject area is development of positive self-concepts in young children.

INTENDED USERS AND BENEFICIARIES

The intended users of the unit are teachers and teaching assistants of children, preschoolers through 3d graders. The intended beneficiaries are those teachers and their students.

GOAL(S) OR PURPOSE(S)

The purpose of this unit is to teach adults who work with young children how to use toys and games with those children in ways that will maximize the children's learning and growth potentials.

PATTERNS OF USE

This product is sequential and cumulative.

ASSESSMENT PROVISIONS

Since the unit is activity oriented, there is ample opportunity for self-evaluation during the course of the learning activities. Additionally, the unit is designed to be used with an instructor; therefore, learner evaluation is a part of the instructor's ongoing activity.

TIME REQUIREMENTS

The time required is 1 hour each week outside the classroom and 20 minutes each day inside the classroom for a period of 16 weeks.

ASSURANCES AND CLAIMS

All toys are safe for children to play with; i.e., nontoxic paint, smooth corners. A field-testing report is available on request.

ARRANGING THE CLASSROOM FOR CHILDREN (PART OF THE FLEXIBLE LEARNING SYSTEM)

A teacher's guide which focuses on physical aspects of a learning environment for children from ages 3 - 8

Arranging the Classroom for Children has been developed for use by any adult who works in a classroom or by anyone concerned with arranging an environment for learning. Specifically, it has been developed primarily for teachers and teaching assistants of children aged 3-8 years.

The unit is designed to focus the attention of the learner on the physical aspects of a learning environment, with the aim of developing the most productive and efficient learning environment possible. The physical environment should respond to children's needs and interests.

The unit requires 25 hours of active participation on the part of the learner. It discusses six specific classroom areas (private, individual free work with seating, learning center with sitting surfaces, learning center without sitting surfaces, general classroom activity, and large-group free areas). The unit provides an imaginary case study of a classroom arrangement, offers variations in the six primary physical areas, discusses physical flexibility in the room, and offers plans for restructuring, moving, or otherwise adapting the classroom space for maximum environmental encouragement to learning.

The unit discusses classroom facilities and resources—such as storage areas, working and seating surfaces, the floor, raised platforms, enclosed areas, and room dividers. It also deals with size, function, boundaries, materials, and working facilities within the educational environment.

SUBJECT AREA(S)

The subject area is physical aspects of the learning environment.

INTENDED USERS AND BENEFICIARIES

The intended users of this guide are teaching assistants and teachers of children aged 3-8.

GOAL(S) OR PURPOSE(S)

The purpose of this guide is to make the intended users aware of the functions and possibilities of the physical environment and become proficient in restructuring that environment to maximize learning.

PATTERNS OF USE

The topics in this guide are sequential and cumulative, with exceptions explicitly made for learners who are already familiar with the author's concepts. A pretest section allows the learner to determine needs with regard to use of the entire unit.

ASSESSMENT PROVISIONS

The unit provides constant self-testing for the learner. If the unit is used in a group with an instructor, learner evaluation is an ongoing part of the instructor's activities. With or without an instructor, however, the pretest, activity-oriented self-tests, and posttest provide ample opportunity for thorough and accurate assessment.

TIME REQUIREMENTS

The time required to complete the unit is 20-25 hours or 8-10 weeks of instruction, with a 2-day training workshop for trainers.

ASSURANCES AND CLAIMS

The unit was tested in Oakland, California, with 33 learners. Significant knowledge gains were obtained with a pretest/posttest design. A field study to determine the performance adequacy and the relationship of paper-and-pencil and performance scores is currently being conducted.

MANAGING THE PRESCHOOL CLASSROOM (PART OF THE FLEXIBLE LEARNING SYSTEM)

A learner's and instructor's guide to teach teachers of preschool children how to better manage and organize the classroom

Managing The Preschool Classroom consists of a learner's guide and an instructor's guide. They are designed to teach teachers of preschool children how to better organize and manage their classroom.

For the purposes of the unit, "classroom management means that events in a learning situation are supervised and sequenced in some systematic way." Classroom management encompasses organizing: The physical classroom, time and activities, and people—both children and participating adults, such as teacher aides. The expressed philosophy underlying the unit's approach to classroom management is that it is crucial that the teacher know who students are and what their individual and group needs are, in order to most effectively manage a classroom toward maximizing its educational potential.

The unit urges that standards be established and maintained for appropriate behavior within the classroom. It also discusses "management approaches that can minimize behavior in the classroom." The guide further suggests methods by which classroom management can be planned to accommodate the particular needs of a specific class, classroom, and/or teacher.

As with other components of the *Flexible Learning System*, this unit operates on the principle that educational potential will be maximized when the structure is most conducive to learning; the structure which is most conducive to learning is that which flows most naturally within the scope of young children's natural inclinations and behavior patterns.

SUBJECT AREA(S)

The subject area is classroom management.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and teaching assistants of preschool children. The intended beneficiaries are both these adults and their students.

GOAL(S) OR PURPOSE(S)

To help teachers and teaching assistants of young children understand the educational potential of proper management of space, time, activities and people within the classroom.

PATTERNS OF USE

Sections are cumulative and sequential.

ASSESSMENT PROVISIONS

The unit is accompanied by frequent guides which enable the teacher to gage comprehension of the course and progress within it. Some of the activity guides require active participation and others require simple observation. If the unit is used by a single learner alone, a "Hints and Answers" section is available for self-check. If the unit is used in a group with an instructor, learner evaluation is included in the instructor's guide.

TIME REQUIREMENTS

Approximately 8 weeks of training or 16 instructional hours. Trainers can be trained in a 2-day training workshop.

ASSURANCES AND CLAIMS

Field test data are currently being analyzed. The testing was conducted in Honolulu, Hawaii and in New York, N.Y.

COMMUNICATING WITH PARENTS (PART OF THE FLEXIBLE LEARNING SYSTEM)

A learner's guide to help improve communications between parents and teaching staff at all grade levels

This unit is intended for teachers, teaching assistants, and educators who work with children and parents. Unlike other units in the *Flexible Learning System,* however, it is not limited to early childhood staff, but can be used by staff at all grade levels.

The learning experiences in this unit will provide the learner with skills to identify desirable ways to communicate with parents; skills to determine parent views and alternative ways to assist their children's education; and skills to survey, plan, and implement programs to achieve better parent and school staff cooperation.

The unit provides the learner with the following opportunities: To obtain knowledge of the communication process, and the interpersonal and cultural factors affecting its operations; to clarify personal goals and contract for changes; to learn which factors contribute to problems in communication; to build new skills in listening and self-expression; and to develop and expand those skills already developed. Learners are given an opportunity to integrate new and old skills as a means of achieving their own goals of more effective communication.

SUBJECT AREA(S)

The subject area is improving communications between teachers and parents.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers, teacher assistants, principals, and other educators who work with children and parents. The intended beneficiaries are educators, parents and students.

GOAL(S) OR PURPOSE(S)

The purpose of this product is to assist teachers in acquiring skills: (1) To identify how they communicate with parents and how they can communicate more effectively, (2) to explore different roles for parents in the education of their children, and (3) to develop and put into practice ways of expanding their roles.

PATTERNS OF USE

The unit is designed to be used in a series of 10 sequential workshops, providing an opportunity to build upon skills the learner brings to the experience and to practice new skills in workshops, family, and work settings. Each workshop will focus on a central theme.

ASSESSMENT PROVISIONS

The unit is structured on the basis of learner activity through group interaction, peer learning and teaching, content-embedded self-assessments, and self-rating of attitudes throughout the unit; it also has an assessment for the instructor.

TIME REQUIREMENTS

The time required for completion is 12-15 weeks of instruction or 15-30 hours; a 2-1/2-day training workshop is required of trainers.

ASSURANCES AND CLAIMS

Field testing is to be completed by November 1975, at which time assurances and claims can be made.

MATERIALS AND EQUIPMENT

MANUAL FOR OPERATING AN INFANT CARE CENTER

Six guides for the operation of day-care centers for infants from 3 weeks to 14 months

Efficient procedures for running and maintaining quality care in an infant day-care center were developed by CEMREL and the University of Kansas. This work was designed to establish infant-care practices so that the staff can handle duties efficiently and provide a safe and healthful environment, engineered to stimulate normal child development. Research was conducted in a center having been designed for up to 20 infants from 3 weeks to 14 months old. Space within the center was assigned according to function, with one staff member assigned to each space. Thus, the model center had three staff members plus a supervisor. The staff members rotated functions during the day, but at all times one person was responsible for each of the three main areas: Feeding, play, and diapering.

Six "how-to-do-it" manuals aimed at prospective day-care operators record the procedures developed at the center. The manuals include: Diapering, feeding, receiving/departing, sleep, play, and the supervisor's responsibilities. The first four manuals are completed and ready for print. The play manual has a complete text and layout, but photographs must be supplied and the text must be set in type. The supervisor's responsibilities manual is a final draft which must be revised.

Each manual includes advice about specific procedures, recommended toys and materials, facilities designs, recordkeeping suggestions, and checklists to provide self-evaluation and to maintain high quality care.

SUBJECT AREA(S)

Early childhood education: Infant group care.

INTENDED USERS AND BENEFICIARIES

Operators and potential operators of centers for group infant care.

GOAL(S) OR PURPOSE(S)

The major goal is to provide a series of reliable, efficient, and high quality technologies to care for infants in a group-care setting.

PATTERNS OF USE

The infant-care manuals are a self-contained training program to introduce both naive and experienced caregivers to efficient routines for operating an infant-care center. The manuals may be read in any order. The supervisor of a center would probably determine how and when they would be used.

ASSESSMENT PROVISIONS

Each manual includes a checklist for staff members to complete about that area of the center. These checklists insure that the quality of care in each area is being maintained and that routines are faithfully carried out. In addition, the center supervisor carries out periodic checks of the operation of the center and reports findings back to the staff to improve and maintain quality care.

TIME REQUIREMENTS

The six manuals, five aimed primarily at caregivers and a sixth focused on the supervisor's responsibilities, can each be read in 1/2 hour. The developers suggest that the supervisor ask caregivers to read a manual and to go to the appropriate area of the center and apply the routines with another staff member. Then, the caregiver works through the routines alone while the supervisor or another staff member checks the performance. The caregiver may then refer to the checklist and the manual again, if necessary. This procedure is repeated for each manual. The entire training might take 1 to 2 hours per day for 5 days.

IMPLEMENTATION PROCEDURES

No special equipment, materials, or personnel are needed to make use of the manuals; all that is necessary is an operating infant-care center arranged spatially according to feeding, diapering, and sleep/play areas.

ASSURANCES AND CLAIMS

The manuals were tested with both experienced and naive caregivers in actual day-care situations. After reading the manuals, naive caregivers were able to perform the routines with 90 percent accuracy within five tries. Repeated observations of the experimental nursery, where the care routines were in use, showed that a consistently high level of care was maintained and the recommended routines were carried out faithfully over a period of months.

MULTIMEDIA TRAINING PACKAGE FOR PARAPROFESSIONAL TEACHERS "SETTING THE SCENE FOR GOOD CLASSROOM BEHAVIOR"

Multimedia training package for helping paraprofessionals who work with preschool children learn basic principles of classroom arrangement and maintenance

Setting the Scene for Good Classroom Behavior is a multimedia training package for paraprofessional teachers, particularly those who have little or no formal training, of preschool children. Designed for a leader, an observer, and 15 participants, the package is used in 5 sessions of approximately 1-1/2 hours each.

The package includes: (1) A leader's manual; (2) detailed session procedures; and (3) a variety of media products—video tapes, filmstrips, films, transparencies, and take-home pamphlets. Each session procedure is designed with an introduction, a straightforward presentation of concepts, group participation activities, and a summary.

The leader's manual includes specific instructions on techniques of group leadership, directions for increasing participation through a variety of techniques such as role playing, simulation, and group discussion, as well as an overview of the training session.

The sessions present basic principles of classroom arrangement and maintenance which will help reduce children's behavior problems. Participants learn how to adapt furniture to meet the needs of young children, how to display materials, and how to arrange space for classroom activities in ways that will promote children's independence while encouraging good classroom behavior.

Each session procedure contains detailed information on how to present the particular concepts included. After a statement of the purpose and focus of the session, these areas are discussed: Introduction, review (if appropriate), overview of media presentation, presentation, discussion, group participation activities, summary, and evaluation. Sample dialog is included when appropriate.

The results of a 4-month context analysis study in January 1973, which included interviews with teacher trainers and nationally recognized experts, a literature search, and conferences with representatives of regional and State agencies, revealed that, although there are many early childhood curriculum programs and materials, the majority are designed for children rather than for adults who interact with children. Further, few materials are available for training of the paraprofessional or assistant teacher or the teacher without a baccalaureate degree. The need for alternative presentation modes, utilizing modern media technology, and placing minimal reliance upon printed material was also identified.

Few, if any materials are organized in modular form or discrete packages which can be presented independently, or are presented in multimedia format so that the adult learner can succeed with only minimal reading skills.

Each Teacher Training Package (*Setting the Scene for Good Classroom Behavior* is the first of three packages to be developed) addresses a major area of basic skill related to maximizing the learning of young children. The Teacher Training Packages use video tape, filmstrips, and other communication media to present the basic information, especially the more complex aspects of the processes involved which are relatively easy to show but more difficult to explain verbally. In addition, short, printed materials are provided for each participant for the purposes of reinforcement and review.

This package is a multimedia approach developed in response to the assessed need for information on basic caregiver skills, with minimal reliance upon printed materials and/or direct lecture. The topic was selected as important for low-income paraprofessional teachers of preschool children by two advisory groups, one comprised of professionals in the field of early childhood education and the other composed of low-income teachers of various ethnic groups, and through a survey of paraprofessionals.

The instructional principles of developing awareness, knowledge, or comprehension, succeeded by application, have been followed. A variety of teaching strategies is described in the Leader's Manual and is also built into each session procedure. These strategies include large- and small-group discussion, simulation activities, role play, problem-solving situations, games, and evaluation, as well as direct presentation of information.

The group leader secures a meeting room and necessary equipment, operates audiovisual equipment, leads the sessions, and distributes and collects evaluation forms. Participants watch media presentations, participate in large- and small-group discussions, role play, and problem-solving activities. Take-home pamphlets which reinforce concepts presented in the sessions are provided.

SUBJECT AREA(S)

The module includes the following subject areas: (1) How inappropriate arrangement and maintenance frequently result in behavior problems, (2) how children feel when the classroom environment is inappropriate, (3) how to change or adapt existing facilities to meet the needs of children, and (4) how to select and display classroom materials.

INTENDED USERS AND BENEFICIARIES

The intended users of this module are paraprofessional teachers of young children and teachers who have had limited formal training in preschool education.

GOAL(S) OR PURPOSE(S)

The goals of this module are to help the participants: (1) To recognize the relation between room arrangement and management and classroom behavior problems; (2) to recognize physical settings that do and do not meet the needs of children; (3) to know which factors to consider in arranging space for various kinds of activities; (4) to know how to select, display, and determine the quantity of manipulative materials to minimize behavior problems; and (5) to understand their role in establishing rules for use of classroom materials.

PATTERNS OF USE

Sessions are sequential and cumulative. They may be used as part of inservice or preservice training programs.

ASSESSMENT PROVISIONS

Tests of participant knowledge of module content are provided for use at the beginning of the package and following completion of the package. In addition, criterion-referenced tests of content for each session are provided.

TIME REQUIREMENTS

The package consists of five sessions, each approximately 1-1/2 hours long.

IMPLEMENTATION PROCEDURES

Audiovisual equipment is required. No specific previous training is required, but a 1-day training session for leaders is recommended.

ASSURANCES AND CLAIMS

Assurances

No reports of harm have been received at this time. Additional data will be collected during pilot and field testing.

No complaints of ethnic or sex-role bias have been received at this time. Additional data will be collected during pilot and field testing.

Claims

The Southwest Educational Development Laboratory has evolved a systematic process for the development of educational products. This product development incorporates the entire gamut of activities in the formulation, development, testing, and evaluation of an educational product so that quality is assured.

Products are cycled through design test, after which materials are revised on the basis of feedback from the target population, leaders, and observers; then through pilot test, and are revised on the basis of feedback; and finally, through field test, after which a final revision based on field data is made.

The multimedia training package for paraprofessionals is being cycled through the laboratory's developmental process and is currently in pilot test.

PROCEDURES FOR THE DAILY OPENING AND CLOSING OF A DAY CARE CENTER

A checklist for monitoring the daily opening and closing routines of day care centers

This product consists of a kit of materials which serves as a checklist for the opening and closing routines for a day care center. It focuses attention on two periods of the day when the children are not present in the center—in the morning before they arrive and in the evening after they leave.

The manual provides a list of relatively simple items that should be checked each night and another list of things to be checked in the morning. Its primary concerns are convenience and safety—to help the day care worker avert problems that might arise from oversight or neglect and to be sure that potential accidents are not encountered by the children.

The manual explains how to use the items provided in the kit. There is a very thorough explanation of the checklists since they serve as the most important elements in the kit. When to use the "Safety Alert" notices is also explained.

SUBJECT AREA(S)

Early childhood education: Center maintenance

This kit provides a simple routine for preventing oversights which could result in accidents or inconveniences within a day care center.

INTENDED USERS AND BENEFICIARIES

Any person who is responsible for a day care center could make use of this kit. The materials in this package have been designed to be used by trainees directly, without the assistance of an instructor.

GOAL(S) OR PURPOSE(S)

The primary purpose of the kit is to provide materials and procedures which will enable its user to monitor the daily opening and closing of a day care center.

PATTERNS OF USE

The checklist provided in the kit is adapted to fit the individual center in which it is to be used, and is used each morning and evening by the designated personnel to check the premises of the center. If it is found that one of the patrolled areas has a problem that needs attention by a staff member other than the checklist monitor, a "Safety Alert" sign is posted. This indicates the problem, such as a leaky faucet, and remains posted until the maintenance staff member can fix it.

ASSESSMENT PROVISIONS

There is no formal testing to measure the success of the kit. The kit itself is a type of "testing" or "checking device." Its success will be measured in the following ways: (1) How well it does prevent accidents and inconveniences; (2) if more than one center is being supervised by the same person, to what degree of uniformity it helps maintain; (3) how well it helps to spot problems, such as improper maintenance, before they begin to get serious; and (4) how well it serves as a record of safety and maintenance which can be kept on hand to show state licensing agents, building owners, or parents.

TIME REQUIREMENTS

The materials require about 1 hour to read. About 30 minutes is needed to adapt the materials to a given center. The daily monitoring and bookkeeping procedures require about 5 minutes each day.

IMPLEMENTATION PROCEDURES

No special training is needed in order to make use of this product. It is advisable, however, that the person monitoring the checklist be acquainted with the day care facility that is to be checked.

ASSURANCES AND CLAIMS

The developer has not received any reports of harm associated with the use of this product. The checklist was tested in an experimental version at the step-by-step preschool in St. Louis, Missouri. At that site, it was found able to stand alone in the hands of a competent teacher and able to be successfully implemented. Social bias and ethnic or sexual stereotyping are not strictly applicable to the content of the kit; however, the developer has made every effort to be fair in the presentation of all materials.

SCHOOL BEFORE SIX: A DIAGNOSTIC APPROACH

A comprehensive manual of diagnostic procedures and activities for preschool children

School Before Six: A Diagnostic Approach, revised edition, is a comprehensive manual of diagnostic procedures and activities for preschool children. It was developed after several years of research and testing by the Cornell Research Program in Early Childhood Education. The diagnostic approach proceeds from the notion that teachers should carefully observe each child's strengths and abilities and gradually provide activities that will refine skills and extend experiences. No specific teaching style is prescribed. Teachers are encouraged to adopt a flexible teaching style compatible with their own personality and taste. However, teachers should have a simple way to look at children and to record their strengths and weaknesses. The diagnostic approach provides this method in the form of anecdotal records, diagnostic activities, and suggestions for initiating and strengthening skills.

School Before Six is printed in two volumes. Volume I includes procedures for assessing young children's learning needs and strengths through testing procedures in four developmental areas: Large, small, and perceptual motor skills; language; social-emotional skills; and conceptual skills. General teaching strategies and activities are suggested to help children develop in each of these areas. Volume II includes a wealth of activities in areas such as science, art, table games, food preparation, language, social science, and music. Volume I is extensively cross-referenced to volume II to make the selection of appropriate activities for specifically diagnosed situations easy.

SUBJECT AREA(S)

The subject area is early childhood education related to diagnosis and teaching of motor skills, language arts, social-emotional skills, and other cognitive skills.

The manual provides techniques of planning for the individual child and for the group; explains how to diagnose and test children in individual situations and tells how to be an effective teacher.

INTENDED USERS AND BENEFICIARIES

Teachers of preschool children and instructors in teacher training institutions are the intended users. *School Before Six* could be used effectively in day care centers, nursery schools, and kindergarten classes.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To help nursery school and kindergarten teachers carry out the difficult task of giving each child the kind of school experience which is personally needed, (2) to help each child grow in all areas using the child's own strengths and interests to aid learning, and (3) to help teachers plan a program that meets the child's needs and at the same time takes into account the teacher's own way of doing things.

PATTERNS OF USE

School Before Six is usually used by working preschool teachers as a resource material to help them diagnose children's needs and select appropriate activities. It is also applicable as a textbook in teacher training courses. User satisfaction in both situations (measured by sales) has been enthusiastic.

ASSESSMENT PROVISIONS

There are no formal testing procedures for teachers who read this book. Sample assessment checklists for children, called needs and plans sheets, are provided in the appendix to volume II. These are the records teachers keep to diagnose children and prescribe activities for them.

TIME REQUIREMENTS

School Before Six is a resource material for preschool teachers. It can provide a complete teaching strategy and all the activities a teacher might use in a preschool class during a year or it can be used occasionally as a reference or supplement for a normal preschool curriculum.

ASSURANCES AND CLAIMS

School Before Six was developed and tested by researchers and teachers at the Cornell Nursery School and at five other nursery schools in Ithaca, New York, and Wilmington, Delaware. No reports of harm have been associated with the use of this product. The diagnostic approach presented in the materials is applicable to children in all locations and socioeconomic settings. The materials do not demand one teaching style but encourage teachers to use the materials in their own way.

The first edition of *School Before Six* was published and distributed through Cornell University. It sold more than 4,000 copies. Selected early childhood specialists and users of the first edition filled out an extensive questionnaire on the value and usefulness of the diagnostic approach, the activities presented, and the format of the book. These criticisms and suggestions led to revisions which are incorporated into the second edition.

RD 050 033

From the dramatic response CEMREL has received to its publication, we conclude that *School Before Six* fills an important need for diagnostic and developmental classroom activities for young children. Many teachers ordering the book have learned of it from their colleagues who are enthusiastic about the many helpful ideas it contains.

TEACHER EXPECTATIONS EARLY ELEMENTARY PROGRAM

A three-chapter training package to help kindergarten teachers with classroom management problems that might be caused by teaching behavior

Teacher Expectations is a training package that alerts teachers to the impact which they have upon the students they teach. It helps teachers understand how children are affected in their classroom performance by what the teacher expects of them.

The program is concerned not only with the essential cognitive skills that students may acquire, but also with their social and emotional development; therefore, it has been written from the learning theory-behavior modification point of view. This product attempts to help teachers with classroom management problems that may be caused by their teaching behavior.

SUBJECT AREA(S)

Subject areas include how personal beliefs, attitudes, and expectations affect perceptions and behavior; how teachers communicate their expectations to students and which teacher expectations promote effective learning; and types of behaviors that indicate problems and should be changed, e.g., projecting negative attitudes toward lessons, placing too great a value on correct answers and showing frustration with failure, thinking or talking about children in ways that suggest permanent labels ("slow learner," "aggressive child"), and failing to follow through on rules and directions.

INTENDED USERS AND BENEFICIARIES

Teacher Expectations was designed for kindergarten teachers, especially those who are teaching children from different experiential backgrounds. While formal testing has not been done, it has been reported that this product has been useful for K-12 teachers. The product has been requested by college and university staffs, human development centers, research and development centers, inservice training institutes, and administrators of school systems. Other potential users are parent-teacher organizations, teachers of special students (e.g., those with birth defects or who are blind, deaf, or mentally retarded), State agencies (e.g. child welfare departments), managers and personnel of businesses and industries, churches, and civic and social organizations. Individual potential users may include lawyers, policemen, social workers, doctors, nurses, foster parents, salespersons, and politicians.

GOAL(S) OR PURPOSE(S)

The purposes of this product are: (1) To describe for teachers those expectations which promote effective learning, (2) to discuss teaching approaches that will help produce positive results, and (3) to help teachers analyze their attitudes and expectations and replace the inappropriate behavior with an appropriate behavior.

PATTERNS OF USE

Teacher Expectations is a self-instructional package that should be referred to throughout the year. It can also be used for inservice and preservice workshops and as an ongoing training package for teachers, supervisors, and others linked with any task where people are involved.

ASSESSMENT PROVISIONS

Assessment provisions are in the form of self-administered checklists for teacher use.

TIME REQUIREMENTS

The training package is intended for use as an ongoing information source; the amount of time spent in assimilating and implementing the suggested strategies depends upon the judgment of the individual user.

IMPLEMENTATION PROCEDURES

Although the manual is primarily self-instructional, trainees may benefit from workshops where detailed explanations and specific questions are addressed. To take full advantage of the individualized nature of the product, users should use the information to carefully assess themselves and to adapt helpful ideas suited for their needs.

ASSURANCES AND CLAIMS

Teachers and administrators have found the information in this manual to be appropriate for use with young children in open classroom settings, individualized learning centers, and self-contained classrooms. The information is effective in each of these instructional environments and has been effectively used with both self-contained and team-teaching strategies. Although the manual has been used primarily with individualized instructional programs for young children, comments from users indicate its applicability in different situations involving all grade levels.

The manual was utilized by multicultural teachers. The program staff, also multicultural, reviewed the materials for biases and made changes where necessary. Since marketing, the product was carefully reviewed by school personnel who expressed a desire for their schools to become demonstration centers. The program staff has found the manual usable without training, therefore insuring replicability and transportability.

HOME-ORIENTED PRESCHOOL EDUCATION (HOPE)

A system for delivering comprehensive home-oriented preschool education for 3- to 5-year-olds in rural Appalachia

The *Home-Oriented Preschool Education* (HOPE) program was developed to deliver effective early childhood education to rural Appalachia. Rural Appalachia imposes many barriers to early childhood education: A low tax base and the physical isolation of rugged terrain, poor roads, and scattered population. HOPE bypasses these barriers with daily preschool lessons broadcast over television. Paraprofessional home visitors and parents assist the children's comprehension and study of the television lessons. Once a week, the children meet for instruction by a certified early childhood teacher in a mobile or stationary classroom.

HOPE began in 1968 under U.S. Office of Education auspices and later came under its National Institute of Education aegis. The Appalachian Educational Laboratory, Inc., (AEL) has been responsible for curriculum development, the preparation of television lessons (a series entitled "Around the Bend"), and all necessary support materials. AEL has carried out these responsibilities through a system of research and development involving field testing and replication studies.

Utilizing this process, AEL has prepared the following instructional materials: A seven-booklet implementation guide (HOPE Manuals), a home visitor training package, and the four-volume *Competency Base for Curriculum Development in Preschool Education*. Two packages of learning activities, one for home use and one for classroom use, and a discussion guide for parent groups will be field tested next year. AEL has integrated feedback from the original television series into several new video tapes. These pilot programs are high-quality, color productions.

The HOPE program has been acclaimed by local, State, and Federal agencies, and the U.S. Information Agency has selected it for overseas recognition. Other home-based early childhood education programs have been modeled after HOPE.

SUBJECT AREA(S)

The subject area is early childhood education.

INTENDED USERS AND BENEFICIARIES

The users are local and State education agencies which are adopting early childhood education for 3- to 5-year-olds. Beneficiaries are the children and parents who learn how to better work with their children.

GOAL(S) OR PURPOSE(S)

The goal is to provide comprehensive home-oriented preschool education for rural Appalachian 3- to 5-year-olds.

PATTERNS OF USE

Although HOPE is a complete, integrated program, its parts can be used separately. The television lessons regulate the sequence. In different broadcast areas, the lessons may be varied in weekly blocks. The home and classroom materials are sequenced in weekly blocks that match the television lessons. Some local adaptations have used television as a classroom component rather than a home component.

Parents are provided with a weekly television guide that informs them of the subject covered in each lesson and the suggested followup activities at home. The paraprofessional home visitor contacts each family once a week, demonstrating to parents ways of working with the child and observing the child's progress. The children meet for a 1/2-day session with the classroom teacher once a week.

Current research and development centers around age-grading the materials in the weekly television guide, and the organization of regular parent meetings. Activities in the guide are being age-graded to fit the child's level of development. Regular parent group meetings can lead to a discussion of mutual problems and can provide effective support for home-based learning.

Finally, a coordinator of field operations handles scheduling and other program maintenance and administrative functions.

ASSESSMENT PROVISIONS

Formative evaluation has been used for each of the three components and will be used as the new materials are produced. Future adopters can follow these same evaluation approaches. An evaluation plan has been designed for testing the new materials. Further work, however, is needed on the child evaluation instrument during 1976.

TIME REQUIREMENTS

Time requirements correspond roughly to the school year, e.g., 170 1/2-hour daily television lessons released over 34 broadcast weeks.

IMPLEMENTATION PROCEDURES

Television scheduling is required. Mobile or stationary classroom facilities must be provided in the vicinity of each 25-home route. A storage and distribution system is needed for the weekly sets of materials distributed to home, visitor, parent, and teacher. Paraprofessional supervision and inservice sessions should be provided. Space for small-group testing of children is desirable. Organizational requirements are difficult to discuss because of user adaptations and local variations in school organization.

Summary Cost Information

Available cost data based on prototypes are sufficiently outdated so as to be potentially misleading, and are omitted. Cost figures of revised materials, including television lessons, are incomplete, but are being developed. Other required materials appear under separate product descriptions (e.g., learning activities files, home visitor training package).

Personnel Required For Product Adoption and Implementation

When the new series becomes available, each home visitor will go to an average of 25 homes per week, serving approximately 30 children. A teacher and aide conduct 2 sessions per day with approximatley 15 children in each. A unit team of 4 home visitors, 1 teacher, and 1 aide serves 120 children. Field office staff varies in size depending on the number of unit teams in operation. The field director and a staff of 2 can administer up to 16 units of 120 children each—optimally there should be fewer units than this. One day per week is devoted to inservice training for all program staff.

Prior estimates indicated that the per-child cost of participation in all components of the program for 1 year was about one-half the cost of kindergarten programs (see *"A Comparison of AEL's Preschool Education Program With Standard Kindergarten Programs,"* ED 061 023).

ASSURANCES AND CLAIMS

Assurances

The prototype program was used for 3 years with about 1,000 children with no reports of physical or psychological harm attributable to the program. No such incidents have been reported by the several educational agencies performing their own replications. Minor accidents, however, are frequent in most early childhood programs and should be anticipated.

Staff felt that problems of social fairness were present in the prototype materials, and all new products have been designed to eliminate such bias. Sample materials have been reviewed by early childhood educators and National Institute of Education reviewers, who have not detected this as a design problem. Continued monitoring is, however, necessary during materials preparation to assure implementation. It is somewhat easier to affirm that racial bias is absent than that sexual bias is absent. To the extent that the television program reflects the day-to-day realities of Appalachian rural life, male and female roles are differentiated. The program attempts to avoid sex-role stereotyping and tries in a low-key manner to display a fuller range of male and female behaviors while accurately depicting Appalachian people and life.

Independent replications and/or adaptations have been sufficiently documented to assure that the HOPE process is transportable. Adaptations of the original HOPE Program are ongoing this year in four separate locations: The DILENOWISCO Educational Cooperative, Norton, Virginia; Clinch-Powell Educational Cooperative, Harrogate, Tennessee; Top of Alabama Regional Educational Service Agency, Huntsville, Alabama; and Project HOPE, Gallipolis, Ohio. The same features which were replicable and adaptable in the original series have been designed into the new series.

Claims

Three years of field studies plus 2 years of independent replications show that children who have been through 1 year of HOPE make significant cognitive and social development gains. They enter 1st grade as well prepared as children who have been through kindergarten. Program variations have been reported regarding television only, television and home visitor, all three components, and control groups which received no preschool education. These findings have been documented extensively in technical reports available through the educational resources information center.

In addition to avoiding social bias, this program attempts to present the races and sexes in a fair and socially constructive light, as shown in the "Guidelines for Writers," a document for television script writers involved in the production of television lessons. The involvement of paraprofessionals and parents in the child's education also tends to rectify the less-publicized bias of professional elitism which has said in the past that only professional educators can teach children.

Although the original products that were field tested for 3 years were highly effective, they were prepared on a minimal budget to permit testing of the basic design. Technical analyses of product quality were made subsequently. All products have been redesigned to be of marketable quality while maintaining the successful features of the original series. Recognized national television professionals are now in charge of television production. The ultimate success of these revisions must still be determined, although conceptual reviews of them have been endorsed by outside reviewers.

Appalachia Educational Laboratory, Inc.
P.O. Box 1348
Charleston, W. Va. 25325

AVAILABILITY

Original products were completed during 1968-71. These are well worn from use and are now in storage. Samples of the revised television lessons will become available in spring 1975. The program staff is ready to produce the new television series and related materials, although prior funding cutbacks forced their cancellation during 1975. Program staff have been authorized to seek alternate sources of funding to permit the production to proceed. Viewing of sample materials can be arranged by contacting the marketable preschool education program staff. For further information, contact:

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 050 036

HOME VISITOR TRAINING PACKAGE (HVTP)

Materials for 2-week training sessions for beginning home visitors who will work with parents to help increase the development of their children

The *Home Visitor Training Package* (HVTP) provides entry-level skills and orientations to trainees who are beginning work as home visitors in connection with home-oriented early childhood education programs. It includes materials and experiences necessary for an initial 2-week training experience, assuming only that a local selection process has been used to obtain personable and responsible individuals with at least a high school education.

The package was created to meet the practical necessity of preparing home visitors to work in AEL's *Home-Oriented Preschool Education* (HOPE) program. The experience of a 3-year field test of the HOPE program in several Appalachian communities, plus subsequent replications, provided a rich experience base for the package design. It is the first and only set of home visitor training materials that has been designed to do the entire job of preparing a paraprofessional recruit to assume the important responsibilities of working directly with parents around the development of their preschool children (aged 3 to 5 years). Its design, however, can be adapted to prepare a home visitor for programs serving the entire early childhood age range (birth to 8 years).

Programed lessons are designed to accomplish specific behavioral outcomes. The approach is experience based, using many simulations—some performed by the trainees and others experienced via the multimedia portions of the package. The trainer's behavior is guided step by step through the 2-week training period. Trainees study, interact, experience, and perform planned exercises. The learning relates directly to the responsibilities that trainees will assume as home visitors. Regular feedback and an overall evaluation indicate trainee progress and areas in which further learning is needed.

SUBJECT AREA(S)

Subject areas include self-awareness and self-appriasal, the home-oriented preschool education process of early childhood education, helping children grow and develop, introduction to teaching and learning, testing others to test ourselves, finding and preparing materials, use of behavioral objectives, developing questioning skills, building listening skills, working with others, the art of respecting others, and resources.

INTENDED USERS AND BENEFICIARIES

Intended users are school systems, Home Start, and other agencies or programs using home visitation. Paraprofessionals initially entering this career area or those being retrained are the primary beneficiaries.

GOAL(S) OR PURPOSE(S)

The purpose of the *Home Visitor Training Package* is to prepare trainees for initial entry into the career of home visitation.

PATTERNS OF USE

Units are organized into self-contained chapters. Though they may be sequenced differently or used selectively, evaluation data are applicable only to the total package sequenced in the approximate order designated.

ASSESSMENT PROVISIONS

A pretest and posttest are provided. Feedback is also generated by periodic exercises and activities.

TIME REQUIREMENTS

Two full weeks or 50-60 hours are required to complete the training.

IMPLEMENTATION PROCEDURES

Special equipment required includes: Video tape monitor and deck slide and tape equipment, and a 16mm projector. Trainers must receive 1 to 2 days of orientation and familiarization (one-time event). A school system using the home-based approach to provide preschool education will have organized its staff in an appropriate manner to deliver the program. The HVTP is directed at one segment of that staff. The multimedia portions of the package are relatively expensive to purchase and would be used infrequently in any single locale. The creation of a rental arrangement would seem to offer a practical solution to this potential problem.

Personnel Required for Product Adoption and Implementation

Two consultants familiar with the *Home Visitor Training Package* would be required for 2 days to orient the supervisor/coordinator and trainers to the training package.

This would be a one-time expense, and the consultants could handle up to 15 trainers. One trainer and one classroom aide would be required for each group of 25-30 trainees. The classroom aide would not need to participate in the orientation session. The trainers need to be skilled adult educators, but they are not required to be knowledgeable in the child development area since the HVTP contains the information needed by the home visitors. The actual training session for the home visitors would extend over a 2-week period.

Initially, the consultants would come from AEL, although subsequent users of the HVTP can in turn serve as consultants to new groups of trainers.

ASSURANCES AND CLAIMS

Assurances

No observable or conceivable physical harm would result from participation; no incidents of physical harm have occurred to date among 100 trainees at 4 geographically dispersed sites. Psychological harmlessness is more difficult to affirm, since such incidents may not be reported as readily as physical harm. The only assurance possible is that there has been no documentable psychological harm among 100 trainees. (See trainee comments in Technical Report No. 45, cited below.)

For a variety of local reasons in rural Appalachia, all local education associations have chosen to use female paraprofessionals as home visitors. (An overwhelming majority of the parents or grandparents receiving these visitors are also females.) The materials thus focus upon a female home visitor, usually visiting with a female parent. The generic use of "he" has been dropped for these reasons, and the home visitor is referred to as "she." The social ethic of rural Appalachia, for which these materials were created, make it unlikely that a male home visitor would be acceptable or could be imposed by Federal social "engineering" guidelines since associational segregation by sex of adults is often viewed as a matter of morality or at least of "good appearances."

In the area of race, all materials use multiracial illustrations. Race is not a topic in the actual text.

Training was conducted at four different geographically dispersed sites in 1973. As yet, however, no materials have been prepared to orient or familiarize trainers, so this must be provided by consultants who are familiar with the entire process. A local or State supervisor could, however, perform this task after receiving initial preparation. Factors in home visitor recruitment and selection have not been studied, nor have home visitor effectiveness and retention.

Claims

Significant gains occurred on a curriculum-content, criterion-referenced posttest. Gains were variable by module across training sites, demonstrating variations in implementation (which have been documented in other ways also, as reported in *Evaluation of the Prototype Home Visitor Training Package*, Technical Report No. 45, ED 093 358). No changes occurred on the *Minnesota Teacher Attitude Inventory*.

The original product was developed, evaluated, and revised based on evaluation results. Thus, conscientious procedures were used in the development cycle. A smaller test is being made of the revised materials during fiscal year 1975.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars*	Replacement Rate and Cost	Source if Different from Distributor
Trainer's notebook	1 per trainee	9.00-11.00	Indefinite (retained by home visitor)	
Trainer's manual	1 per 25-30 trainees	75.00	Indefinite	
Multimedia package	1 per class unit	2,000.00-2,500.00	Indefinite	
Parent's notebook	1 per home	15.00-20.00	Indefinite (retained by parent)	

*All represent initial-run high costs including such items as artwork. Later production costs will be lower; but they are not currently available.

DEVELOPER/AUTHOR:

Marketable Preschool Education Program
Appalachia Educational Laboratory, Inc. (AEL)
P.O. Box 1348
Charleston, W. Va. 25325

AVAILABILITY

The revised package is available on a limited basis at cost during the period that it undergoes field testing of the revision during 1975. A final revision (minor) will be required following current field testing. Provided that the revision can be accomplished during 1976, it should be placeable with a publisher (or otherwise disseminated) by summer 1976. For further information, contact:

Marketable Preschool Education Program
Appalachia Educational Laboratory, Inc.
P.O. Box 1348
Charleston, W. Va. 25325

INFORMATION CURRENT AS OF MARCH 1975 ■

HOME VISITING WITH MOTHERS AND INFANTS

A home-visiting approach to increase infant educability

Home Visiting With Mothers and Infants places emphasis on homes as educational settings and parents as educational change agents. Learning and teaching are continuing processes. The major concern is for working with mothers and infants in their homes to increase the educational potential of the infants. The mother, the infant, and the home visitor belong to a team that attempts to foster the development of the infant. The home visitor works in the home, respecting the dignity, rights, and values of the home. The home visitor works with and through the mother to promote the development of the infant.

A home-visitor approach to early childhood education is a meaningful strategy because it incorporates parent involvement in the educational process, the use of paraprofessionals as effective educational change agents, cost and benefit considerations, and education in a nontraditional setting. By using to advantage the fact that education is transmitted in all contexts, by all people, in all places, quality education can be achieved.

Major considerations that underlie the home-visiting approach have to do with provisions recommended for the infant, the role of the mother, and the role of the home visitor.

Home Visiting With Mothers and Infants was a downward extension of work done at the Demonstration and Research Center for Early Education (DARCEE) with young children 3-6 years old. *A Guide for Home Visitors* (R. Giesy, 1970) provided information about the home-visiting approach. This manual was written as a supplement to provide information about a home-visiting strategy with mothers and infants and home-visitor practices to modify mothers' interactions with their infants.

The contents of this manual range from general, *a priori* considerations to specific, empirical findings. Chapter I discusses considerations that underlie the home-visiting approach. Chapter II gives details in the overall process of planning, implementation, and evaluation of the home-visiting program with mothers and infants. Chapter III specifies how *Home Visiting With Mothers and Infants* proceeded. Chapter IV presents suggestions, observations, and evaluations made during the conduct of *Home Visiting With Mothers and Infants*.

SUBJECT AREA(S)

Early childhood education including parent training program and home intervention with infants is the subject area.

The program is specifically geared to parents of a low-socioeconomic status. The book discusses considerations that underlie the home-visiting approach, gives details for implementing such a program, describes how home visiting proceeds, and presents suggestions and observations made during home visiting.

INTENDED USERS AND BENEFICIARIES

The intended users are those interested in learning more about the home-visiting approach as used in this project: Social workers, counselors, teachers, churchworkers, and others who carry out home intervention programs.

GOAL(S) OR PURPOSE(S)

The major goals of the project are to describe an approach for working with mothers and infants in their homes to increase the educability of the infants and to provide information about a home-visiting strategy with mothers and infants, and home-visitor practices to modify mothers' interactions with their infants.

PATTERNS OF USE

The manual can be used by any home visitor such as a social worker to learn more about the home-visiting strategy developed through the DARCEE program.

ASSESSMENT PROVISIONS

There are no formal testing procedures for the people who read this manual. Mothers who participate in the home-visiting program are asked to write a short explanation of "What this program has meant to me." Specific assignments are given to the mother by the home visitor, and recommendations are made by the home visitor to the mother. During the conduct of home visits, there were opportunities for field testing and observing. The home visitor was required to fill out forms in which objectives for the mother and the behavior of the mother and infant were given. This was evaluated and recommendations were made.

TIME REQUIREMENTS

The manual requires 2 hours' reading time.

RD 050 037

IMPLEMENTATION PROCEDURES

If the home-visiting program as described in the manual is to be used in other communities, trained personnel to serve as the home visitors would need to be hired. Materials which were used in the lessons were the usual household items or dime store items and should be easily available.

ASSURANCES AND CLAIMS

All attempts were made to eliminate any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content in this product as well as in the project upon which it is based.

The participants in the project reported favorably about its worth to them. They all felt they had seen positive changes in their children and in their families as a result of participating in the program. The developers were trained specialists in early childhood education. They used careful field test and research methods in developing, implementing, and assessing the results of this project.

RD 050 038

MATERIALS FOR INFANT DEVELOPMENT

A description of 40 toys and other objects that can be used to promote infant development in the home

The purpose of this manual is to discuss materials that promote infant growth and development. *Materials for Infant Development* is written as a manual that complements and extends information that was presented in a procedural manual entitled *Home Visiting with Mothers and Infants* (Forrester, Hardge, Outlaw, Brooks, Bosimier, 1971). Both manuals were prepared to describe an approach to working with mothers and infants in their homes to increase the educability of the infants.

The Demonstration and Research Center for Early Education (DARCEE) infant study was the context in which attention was given to infant development and *Materials for Infant Development*. Work on infant development and *Materials for Infant Development* was a downward extension of work done at DARCEE with young children 3-6 years old.

The contents of this manual share with the reader understandings about infant development and provisions for infant development that have been found meaningful and useful. Chapter I outlines areas of early development and several provisions needed for development. Chapter II gives details of the materials that were field tested with 20 mothers and their infants. The chapter includes a description for each of 40 materials that were developed and used in the project, including how it was made, why and how it was used, and a sketch of the material.

SUBJECT AREA(S)

Early childhood education as a home intervention program for infant development is the subject area. The manual outlines areas of early development and provisions needed for development, details the inexpensive materials that were introduced into homes to promote infant development, and shows how materials were related to the home-visiting program.

INTENDED USERS AND BENEFICIARIES

The intended users are those who are interested in learning about toys and other objects which are safe for children and how these materials can be used to facilitate development: Social workers, counselors, teachers, churchworkers, and others who carry out home intervention programs.

GOAL(S) OR PURPOSE(S)

The purpose of the report is: (1) To discuss materials that promote infant growth and development, (2) to share understandings about infant development and provisions for infant development gained through the project, and (3) to describe an approach to working with mothers and infants in their homes to increase the educability of the infants.

PATTERNS OF USE

The manual is self-contained. It may be read and applied to other early education programs, especially those serving low-socioeconomic-status families. It can be used by educators or home visitors wishing to learn more about materials for infant development.

ASSESSMENT PROVISIONS

There are no formal testing procedures for those who read the book. Copies of the forms which the home visitors used in the project are included in the book as well as the forms that are used by the materials specialist in evaluating the materials which were field tested in the project.

TIME REQUIREMENTS

Two hours are required for reading time.

ASSURANCES AND CLAIMS

All efforts have been made to avoid any form of social bias, ethnic or sexual stereotyping, or inappropriateness of content in this product. No reports of harm have been associated with its use.

The success of the project is verified by future toy purchases made by the parents who took part in the program. The last home visits of the DARCEE infant study were made in November 1970. After the 9 months of involvement with the project, the mothers made carefully reasoned choices of commercial toys for their infants. Some shopped for discount toys and others planned for lay-away purchases, giving equal attention to the appropriateness of an item for their infants. The Christmas 1970 purchases made by the families, in general, were good choices of materials for child development.

MULTIMEDIA TRAINING PACKAGE FOR PARENTS "LIVING AND LEARNING IN THE HOME"

A multimedia training package for low-income parents of preschool children for teaching their children at home

Living and Learning in the Home is a multimedia training package for low-income parents of preschool children. Designed for a leader, an observer, and 15 parents, the package is designed to be used in 5 sessions of approximately 1-1/2 hours each.

The sessions show parents how they can teach their children throughout the day by talking about home activities and household objects, and how they can encourage their children to search independently for answers and solutions. The sessions show parents how to use home activities and household objects to enrich their children's learning without purchasing commercial materials.

Each session procedure includes detailed information on how to present the particular concepts included. Following a statement of the purpose and focus of the session, the format is as follows: Introduction, review (if appropriate), overview of media presentation, presentation, discussion, group participation activities, summary, and evaluation. Sample dialog is included when appropriate.

Although materials and program ideas for use in parenting programs are available, they are generally scattered, unvalidated, and unreplicated. Further, evidence suggests that supportive behavior by a valued person, such as a mother, correlates highly with cognitive development. Yet no systematic attempt is being made to build upon this evidence, and little effort is being made to use modern technology for wide application of successful strategies. These lacks and needs in combination present one overriding problem—adults involved in performing services for children need more knowledge and skill in child care.

Materials currently available for use with parents tend to be heavily oriented toward middle-class parents and heavily dependent upon the printed word. Few, if any, are organized in modular form so that they can be presented independently or are presented in multimedia format so that the adult learner can succeed with only minimal reading skills.

The package includes a leader's manual, detailed session procedures, and a variety of media products—video tapes, filmstrips, films, transparencies, and take-home pamphlets. Each session procedure is designed with an introduction, a straightforward presentation of concepts, group participation activities, and a summary.

The leader's manual includes specific instructions on techniques of group leadership; directions for increasing participation through techniques such as role playing, simulation, and group discussion; and an overview of the training sessions.

SUBJECT AREA(S)

The module includes the following subject areas: (1) Parental attitudes, behaviors, and feelings and their effects on children; (2) using home activities to help children learn; (3) materials to use with children at home; and (4) how to structure a learning experience for a child at home.

INTENDED USERS AND BENEFICIARIES

The intended users of this module are parent leaders and low-income parents of preschool children.

GOAL(S) OR PURPOSE(S)

The participants will: (1) Recognize that their attitudes behavior, and feelings affect their children; (2) understand the value of home activities in helping children learn; and (3) be able to use home materials and activities with their children.

PATTERNS OF USE

The instructional principles of developing awareness, knowledge, or comprehension, followed by application, were used. A variety of teaching strategies is described in the leader's manual and are also built into each session procedure. These strategies include large- and small-group discussion, simulation activities, role play, problem-solving situations, games, and evaluation, as well as direct presentation of information.

The group leader secures a meeting room and necessary equipment, operates audiovisual equipment, leads the sessions, and distributes and collects evaluation forms. Participants watch media presentations, participate in large- and small-group discussions, role play, and problem-solving activities. Take-home pamphlets which reinforce concepts presented in the sessions are provided.

Sessions are sequential and cumulative.

RD 050 039

ASSESSMENT PROVISIONS

Tests of participant knowledge of module content are provided for use at the beginning of the package and following completion of the package. In addition, criterion-referenced tests of content for each session are provided.

TIME REQUIREMENTS

The package consists of five sessions, each approximately 1-1/2 hours long.

IMPLEMENTATION PROCEDURES

No special equipment is required, and all materials are provided. No specific previous training is required, but a 1-day training session for leaders is recommended.

ASSURANCES AND CLAIMS

Assurances

No reports of harm—physical, psychological, sociological, or other—as a consequence of any activity which goes beyond the application of those established and accepted methods necessary to meet user needs have been received. No complaints of ethnic or sex-role bias have been received.

Claims

Living and Learning in the Home is a multimedia approach developed in response to the assessed need for information on basic parenting skills, with minimal reliance upon printed materials and/or direct lecture. The topic was selected as important for low-income parents of preschool children by two advisory groups, one comprised of professionals in the field of early childhood education, the other composed of low-income parents and teachers of various ethnic groups.

The Southwest Educational Development Laboratory follows a systematic process for the development of educational products. This product development incorporates the entire gamut of activities in the formulation, development, testing, and evaluation of an educational product so that quality is assured.

Products are cycled through a design test, after which materials are revised on the basis of feedback from the target population, leaders, and observers; products then go through a pilot test and revision on the basis of feedback; and finally, they go through a field test and final revision based on field data.

The multimedia training package for parents, *Living and Learning in the Home*, has been cycled through the Laboratory's developmental process, and revisions will be complete by November 30, 1975.

DEVELOPER/AUTHOR:

Southwest Educational Development Laboratory

PARENT/CHILD TOY-LENDING LIBRARY

A toy library that helps parents learn how to teach problem-solving skills to 3- and 4-year-old children

The *Parent/Child Toy-Lending Library* was developed by the Far West Laboratory to help parents learn to use toys and games at home to teach specific skills, fundamental concepts, and problem-solving behavior to their 3- and 4-year-old children. The overall goals are to promote the child's intellectual development and positive self-concept. The toy library is based on research which concludes that parent/child interaction can influence self-confidence and that parents can be trained to change a child's self-concept. In conjunction with the toy library, there is a 16-hour course in which parents learn techniques that can promote the child's self-confidence and growth in the following areas: Identifying sounds; color matching naming, and identification; shape and size discrimination; and sensory concepts.

By playing the role of a child, the parent learns to use the "discovery" approach with the toys. This involves the child's exploration and free play, self-pacing and self-direction, and the parent's responding to the child. Parents learn to use positive instead of negative terms (e.g., "Sit on the floor" instead of "Don't climb on the shelves") and to use precise descriptive language ("The blocks are all red" rather than "They match"). Parents learn to use a variety of education materials they can take home: Sound cans, "feely bag," color lotto, color cubes, flannel board, table blocks, spinner board, hundred peg board, alphabet board, pattern box, and books. Discussions of child growth and development principles, discipline, and parent/teacher relationship are included in the course. Several days of special training for the course-leader/librarian are required.

Parents view films, filmstrips, and demonstrations showing ways to use each toy; and they assume the roles of children as they learn to organize and conduct activities that will encourage their children to make decisions and solve problems.

In addition to viewing films and demonstrations and role playing with other adults in class, parents are expected to take one toy home each week for use with their children; to discuss with the course leaders and other course members topics related to the education of their children; and to practice specific ways of responding to or working with their children to promote physical, intellectual, or emotional growth.

SUBJECT AREA(S)

Parents are helped to learn to develop their children's intellectual abilities and self-concepts and to take an active role in their children's education.

Parents learn to use the toys and techniques of the course to teach their children the following concepts and skills: Color matching, color naming, color identification, letter shape matching, shape naming, shape identification, letter recognition, numerical concepts, relational concepts, sensory concepts, problem solving, verbal communication, verbal comprehension, and auditory discrimination.

INTENDED USERS AND BENEFICIARIES

Intended users are parents willing to be trained to use educational toys and games at home with their preschool children. Teachers and teaching assistants in nursery schools, day care centers, and primary classrooms may also be users. Beneficiaries are the individuals just mentioned and their children or students.

GOAL(S) OR PURPOSE(S)

Parents who complete the course will feel that (a) they have learned a new way to help their children acquire skills and concepts that the parents think are important and (b) they have a better understanding of what their children are capable of learning and doing. In most instances, this belief will result in the parents' feeling that their children are capable and can be successful. The children should learn how to solve some problems involving skills and concepts and continue to develop intellectually, as well as in positive self-concept, provided that the parents continue to help them in ways similar to those learned through the course.

PATTERNS OF USE

In the 8-week training course (2 hours per session), parents are introduced to the materials and techniques of the program and are taught how to use each of the basic toys (color lotto, stacking squares, number puzzle, "bead-o-graph"). Parents are encouraged to continue working with their children after the course in a similar manner, using ordinary toys or objects found in most homes (pots and pans, salt shakers, nesting trays), or borrowing some of the supplementary "loaner" toys developed for the toy library (alphabet board, property blocks, hundred peg board).

ASSESSMENT PROVISIONS

The librarian manual includes a section that enables parents (as well as the course-leader/librarian) to determine how well the program is working locally. Forms are provided to facilitate comparison of the toys and games in terms of children's interest in them, clarity of directions for parents, degree of difficulty at the games, extent of children's learning and the like.

TIME REQUIREMENTS

Eight weeks, with one 2-hour session per week are necessary for completion of the training course.

IMPLEMENTATION PROCEDURES

The library can be located in any central building, e.g., school, church, vacant store, community center. The course leader should be a community member (local parents might feel less comfortable with an "outsider"). Refer to the publication, *"A Guide to Securing and Installing the Parent/Child Toy-Lending Library"* for suggestions on organization. (See "Special Equipment and Facilities.")

The required training for the course-leader is intended to provide familiarity with the relation of self-image to learning, and with the concepts, techniques, and materials of the toy library; and to develop skill in training the parents to use and invent new learning activities and in providing the information necessary for administering the library. Two to five days of training, depending on the needs of the course-leaders, are conducted by a consultant whose services can be arranged by contacting the Far West Laboratory.

After the decision to organize a *Parent/Child Toy-Lending Library* has been made, contact Richard Bateman, Educational Services, Far West Laboratory for Educational Research and Development, 1855 Folsom Street, San Francisco, California 94103. Under contract to the adopting agency, he can lend technical assistance in initial planning and organization and in making arrangements for course-leader/librarian training.

SPECIAL EQUIPMENT AND FACILITIES

Filmstrip projector, audiotape cassette recorder, and a 16mm sound film projector are required. In addition to the Toy Library toys, the library should be supplied with other kinds of toys, children's books and records, games, and educational materials, all of which parents may borrow.

"A Guide to Securing and Installing the Parent/Child Toy-Lending Library" gives an overview of the program and many helpful hints for initial planning. Order from Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 (Stock No. 1780-0993, $0.60).

ASSURANCES AND CLAIMS

Assurances

Based on 2 years of laboratory-supervised preliminary and field testing and 3 years of operational use nationally without laboratory intervention, the toy library can be used successfully in any setting where a course-leader/librarian is available to conduct the parent training course and to recruit local participants. Moreover, General Learning Corp., has made all necessary adjustments in manufacture of the toys to meet child safety requirements.

The materials have been extensively used with all major U.S. minority groups, thus establishing that the toys and games are "culture free" and do not demean the ethnic or racial heritage of parent or child. (Parent and librarian guides are available in Spanish; a Chinese Parent Guide is also available.)

Claims

The *Parent/Child Toy-Lending Library* is a well-developed, readily available, and extensively used research- and development-based training program for parents of preschool children. Many hundreds of toy libraries have been established—at least one in every State of the Nation, ranging up to statewide use in Alaska and Utah—without any difficulties being reported to the developers. However, no funds have been made available to evaluate ongoing toy library programs to ascertain the extent of their outreach and continuation potential.

Program evaluation is based on results from field tests at four sites, one with working-class black parents, one with middle-class white parents, and two with Mexican-American and white working-class parents. The toys not judged interesting to the children were revised. As a result of the course, parents met three of the four specific course objectives: To feel competent to help their child learn basic skills and concepts, to feel that the child can learn and can be successful, and to be more effective in aiding their child's development. In addition, parents showed a generally high degree of interest in the course. The only parent objective with inconclusive evidence concerned competency to influence decisions affecting the child's education. Field test results also indicated that the children learned a considerable amount during the duration of the course. The training program for course leaders was also judged highly satisfactory.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Cost and Rate	Source if Different from Distributor
Set of basic toys	1 per parent	75.00	Reusable	
Set of 8 filmstrips and audiocassettes*	1	100.00	Reusable	
Librarian's manual	1	2.10	Reusable	
2 Parent guides	1 each per parent	1.25 each	Reusable	
16mm color film	1	200.00**	Reusable	
Training for course leader	2-5 days	Normal consultant fee		Far West Laboratory for Educational Research and Development, 1855 Folsom St., San Francisco, Calif. 94103
Recommended supplementary items:				
Set of "Loaner" toys	1 per library	75.00	Reusable	
Miscellaneous toys, children's books, and records	As needed		Reusable	User supplies

---

*Tapes are available in Chinese and Spanish as well as English.

**The film can be borrowed at no charge from Modern Talking Picture Service, Suite 4, 200 L Street NW., Washington, D.C. 20036, or from any of the agency's local offices (consult telephone directory for local address).

TEACHING YOUR CHILD, A TELEVISED PARENT TRAINING PROGRAM

A guidebook and a television program to provide basic concepts in child rearing to the parents of economically disadvantaged preschool children

The purpose of this project is to provide parents of a lower socioeconomic status with a low-cost program by which they can learn basic principles necessary for the early behavior formation of their children.

The project consists of a guidebook and a television program through providing basic concepts of childrearing and developing desirable behavior in their children.

The primary objective of the instructional program is that parents should be able to correctly apply the principles of behavioral management to the behavior of their own children.

The guidelines around which the program was developed incorporate three types of behavior: (1) Developmental behaviors parents might wish to strengthen, (2) problem behaviors parents might wish to decrease, and (3) appropriate behaviors parents might wish to maintain.

These behavior categories were further defined: (1) Behaviors related to reading, writing and language development; (2) behaviors related to self-management by children; (3) behaviors related to successful peer/sibling interaction; and (4) behaviors related to successful parent/child interaction.

The activities in the parent guidebook, *Teaching Your Child*, are based on these guidelines.

The guidebook, written on a 3rd-grade reading level, follows a programmed learning approach. Each lesson has a cartoon illustration, a content section, and a section of questions. The questions are followed by the answers with an explanation of each one.

SUBJECT AREA(S)

Parent Training

Teaches parents to implement behavior modification principles with their own children, encourages parent and child communication, upgrades the later intellectual functioning of the children, and develops language skills and increases motivation.

INTENDED USERS AND BENEFICIARIES

Parents of preschool children, especially parents of a lower socio-economic status.

GOAL(S) OR PURPOSE(S)

The purpose of this project was to develop and test a model by which a variety of environmental enrichment techniques could be taught to lower socioeconomic status parents on a cost-effective basis. Inherent in meeting this objective was the development of an instructional program which could be efficiently presented to parents and which would offer parents the needed skills in reinforcement procedures for effectively teaching their children.

PATTERNS OF USE

Teaching Your Child is usually used by lower socioeconomic status mothers having limited educational background. The program can be completed in the parent's home by working through the written book and exercises and viewing a 30-minute TV presentation.

ASSESSMENT PROVISIONS

A multiple-choice type question is provided within each lesson. The parent checks the child's answer by turning the page and finding the correct answer with an explanation of why it was or was not correct. A summary statement follows the answer explanation. This statement reinforces the concept taught in that lesson.

TIME REQUIREMENTS

The length of the video tape is 30 minutes. The time needed for completion of the text *Teaching Your Child* will depend on how much time a parent wishes to spend on it.

IMPLEMENTATION PROCEDURE

No special training is needed in order to make use of the product. The booklet stands on its own, so parents may implement the program even if they are unable to view the video taped program.

ASSURANCES AND CLAIMS

Assurances

No reports of harm have been associated with the use of this product. The program is designed for use with low socioeconomic status parents of preschool children; however, every effort has been made within the program to eliminate all forms of racial and social bias, ethnic or sexual stereotyping. (See the Final Report section on

Formative Development and Evaluation.) Formative evaluation information was collected in two separate trials of the materials with small samples of low socioeconomic status mothers. Revisions were made based on these trials to correct for the short comings identified by developers and participants. Final evaluation showed that parents were receptive to the program, and that it could be successfully completed by parents in their own homes.

Claims

The programed test and video taped simulation have been evaluated with a representative sample of the target population. This limited field test has demonstrated a high receptivity for program content, the readability of the instructional materials, and the adequacy of the response mode.

The data indicated that: (1) The programing models for the test and video taped simulations were effective as demonstrated by the parents' ability to select correct procedural statements related to behavioral management after exposure to the program, the parents' successfully written applications of the principles of behavioral management to the behaviors of their children, and the parents' receptivity to both the programed materials and their contents; and (2) the model for tele- vised criteria checks was ineffective.

TV SPOT ON READING TO YOUR CHILD

A television spot announcement and booklet to convey basic child-rearing skills to low-income parents of preschool children

This product, *TV Spot on Reading to Your Child,* is a network-quality, color-television spot announcement accompanied with printed materials that have been developed with a dual purpose: Creating public awareness of basic childrearing skills and researching the effectiveness of spot TV announcements in communicating with low-income parents. The first spot, "Clay," focuses on the importance of reading to the very young child. It is available in both 60- and 30-second versions.

The spot announcement invites viewers to write for the additional information contained in *Read to Your Child,* an illustrated 12-page booklet that explains to parents why it is important to read to very young children, provides practical suggestions for reading aloud, and advises how to select appropriate reading material for children of different ages.

TV Spot on Reading to Your Child and the booklet were developed in response to an assessed need for the dissemination of information on childrearing skills using modes of presentation suited to audiences other than the well educated and the middle class who have already been availed of most childrearing advice.

The topic was selected as important to members of the target population by two advisory groups—one comprised of professionals with extensive experience in early childhood education and parent education and the other composed of low-income parents and paraprofessionals of various ethnic groups.

The purchaser of the TV spot either arranges with local television stations to broadcast the spot on a public-service basis or buys air time. The buyer also arranges to mail the booklets to viewers who request additional information.

SUBJECT AREA(S)

Reading to your child is the subject area.

INTENDED USERS AND BENEFICIARIES

The beneficiaries for both the TV spot and booklet are low-income parents of preschool children. Both have been found appropriate for various ethnic groups.

GOAL(S) OR PURPOSE(S)

The goals are to make parents more aware of their influence on their children and to encourage parents to read to their children.

PATTERNS OF USE

The TV spot and booklet may be used alone or as part of a larger campaign on reading or on being effective parents.

TIME REQUIREMENTS

Although no minimum period of time is required, it is recommended that the spot be broadcast for at least 4 weeks.

ASSURANCES AND CLAIMS

There is no evidence to suggest that the TV spot or the booklet would induce harmful physical, psychological, sociological, or other consequences.

Both the TV spot and the booklet have been tested with target audiences comprised of Mexican-American, black-American, and Anglo-American parents; in addition, the booklet has been reviewed by outside consultants. The test data and consultant reviews indicate that ethnic groups were portrayed fairly and without stereotyping.

The TV spot has been broadcast in a five-State area where local television stations were highly receptive and showed it frequently.

To date, the spot has not been used by local groups independent of Southwest Educational Development Laboratory.

RD 050 042

CHILDREN'S FRIENDSHIPS IN SCHOOL SETTINGS

Existing research on children's friendships in nursery and elementary school settings

This paper synthesizes research on children's friendship (in nursery and elementary school settings) and has implications for teachers and early childhood personnel. The influence of school environment on friendships, stereotypes affecting children's friendships, and the development of social skills affecting peer acceptance are among the topics discussed. The paper concludes with a discussion of methods (such as shaping, modeling, and coaching) by which children can be taught appropriate social skills to help them in making friends.

SUBJECT AREA(S)

Subject areas discussed in this paper include: Development of social competence in elementary and preschool children; school environment; communication skills; factors involved in peer popularity; management of conflict and aggression; and teaching methods (shaping, modeling, and coaching).

INTENDED USERS AND BENEFICIARIES

The intended users of this paper are teachers and aides in early childhood programs and in elementary schools. It will also be of interest to researchers and trainers of teachers and early childhood personnel.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to review existing research on children's friendships in nursery and elementary school settings and suggest ways in which children can be taught appropriate social skills for making friends.

COGNITIVE DEVELOPMENT IN YOUNG CHILDREN: A REPORT TO TEACHERS

A review of psychological research on cognitive development in children from ages 3 to 8 with suggestions to teachers on how to apply the research findings

A brief (approximately 100-page) review of the current psychological research on cognitive development in 3- to 8-year-old children has been prepared in a format which makes this information accessible and comprehensible to teachers. Basic research findings are tied to specific suggestions for classroom practices, so that the relevance of the psychological research is clearly apparent to the reader.

Topics covered in the report include attention and discrimination, memory, language, and logical thinking in young children. Each major chapter is introduced by a recommendations digest which summarizes suggested teaching techniques and the research rationales on which they are based. Extensive references document the arguments of the report. References which are of special interest to teachers are marked so that they can be readily identified by those who wish to read further in particular areas.

The report is designed to serve as a reference for individual classroom teachers, as well as a focal point for group discussion in formal or informal teacher training situations.

SUBJECT AREA(S)

Psychological research literature on cognitive development in 3- to 8-year-old children is reviewed and integrated with practical suggestions for teaching techniques consistent with the research findings. The major research areas covered are attention and discrimination, memory, language, and logical thinking. The suggestions derived from the research findings have relevance for all types of classroom activities.

INTENDED USERS AND BENEFICIARIES

The potential audience for this report includes practicing preschool, kindergarten, and early elementary school teachers; teachers in training; and teachers supervising other teachers or classroom aides and volunteers.

The report is brief and direct enough to be used by busy teachers who have little time for outside reading. It is suitable for many graduates of 2-year associate degree programs, as well as for teachers with more extensive training.

GOAL(S) OR PURPOSE(S)

The purposes of this program are: (1) To provide teachers of 3- to 8-year-old children with a coherent understanding of current psychological knowledge about young children's thinking and language, (2) to suggest teaching techniques consistent with psychological research findings, and (3) to provide extensive references for further reading in particular subject areas.

PATTERNS OF USE

The report may be used independently by individual classroom teachers, but it is also well suited for use in informal or formal group sessions.

Preliminary audience reactions to the report indicate that it can provide a stimulating focus for discussion during inservice training sessions. It may also serve as a text in academic courses, perhaps in conjunction with other texts covering specific areas. The report was prepared jointly with a similar report, *Social Development in Young Children: A Report for Teachers.* The two books, which share similar goals and formats, can be used together to cover a broader range of psychological findings concerning children's development.

Recommendations digests which introduce each major section of the report have been designed as summaries of the major psychological points made in each section and the specific teaching techniques which are consistent with the psychological findings. These digests can be used as quick reference guides and may be particularly valuable for training classroom personnel who are not comfortable with large amounts of written material.

TIME REQUIREMENTS

Most teachers could carefully read through the report in 3 to 4 hours. A preliminary skimming of the recommendations digests could be accomplished in 1/2 hour or less.

MATERIALS AND EQUIPMENT

Copies of the reports will be available from the Government Printing Office. The cost per copy has not been established at this writing.

ASSURANCES AND CLAIMS

The preparation of this report was guided by a desire to preserve a cautious and moderate perspective on new research and theories in order to minimize the dangers of premature application of incompletely tested psychological conclusions.

The teaching techniques suggested in the report are not given with any guarantees of effectiveness, although some have been used successfully in research situations or in innovative educational programs. In general, the suggested techniques are procedures which are consistent with whichever techniques the teacher is already using. No great revolutions in technique are proposed. Rather, the report lists many specific strategies which teachers might try using in order to adapt their instruction to the capacities and propensities of young children.

A preliminary draft of the report was read and discussed by 25 practicing preschool and early elementary school teachers. All groups found something of value in the report, although certain sections were more relevant to some groups of teachers than to others.

The teachers' written reactions to the report indicate that, as a whole, they found it useful in broadening their awareness of recent psychological research, suggesting new techniques based on that research, and reminding them of principles and techniques they had forgotten. The report was carefully edited to eliminate potential biases related to gender, racial, or socioeconomic stereotypes.

A COLLECTION OF PAPERS FOR TEACHERS

Four papers on selected issues in early childhood education

This collection of four papers focuses on selected issues in early childhood education. The first paper, "The Advisory Approach to Inservice Training," presents the highlights of a year's experience with the advisory (onsite consultant) approach to the inservice education of elementary school teachers. A major objective of this pilot study was to be able to answer questions about what it is like to be an adviser, which problems arise in the course of using this approach, and how an advisory system should be designed. The second paper, "Developmental Stages of Preschool Teachers," suggests four dimensions of training for preschool teachers: (1) Developmental stages of the teacher, (2) training needs of each stage, (3) location of the training, and (4) timing of training. In the third paper, "The Enabling Model for Early Childhood Programs," the broad dimensions of the *Enabler Model* have been outlined. Rather than offering a community a predesigned experimental curriculum, the *Enabler Model* provides regular onsite support and guidance to assist local communities in the formulation and implementation of their own preschool programs. The last paper, "Condition With Caution," provides a paradigm in terms of phenotype and genotype for the consideration of contrasting explanations of behavior.

SUBJECT AREA(S)

Subjects included in this collection of papers are: Program development in early childhood education, inservice teacher education programs, teacher guidance and teacher role, classroom behavior, and professional teacher development.

INTENDED USERS AND BENEFICIARIES

The program is designed for preschool teachers child caregivers, teacher trainers, and administrators.

GOAL(S) OR PURPOSE(S)

The goal of this program is to provide topical papers on information of interest to teacher trainers and teachers.

A COMPARISON OF PROVISIONS IN STATE AND FEDERAL STANDARDS FOR INSTITUTIONAL DAY CARE

A comparison of State provisions for institutional day care

Program designers, developers, and policymakers often need access to comparative information about the standards for day care in the various States. One problem with standards for day care is that they typically fall under more than one agency of State government. Often standards conflict, and agency responsibility overlaps in some areas and is nonexistent or ambiguous in others. As a consequence, the National Program on Early Childhood Education undertook to collect the applicable standards covering institutional day care and to prepare a report comparing provisions across the various States. The report also includes a universal checklist of items which must be considered in setting up a day care program. In all, the standards of 44 States are included in the report. The responses received from the remaining six States indicated that their guidelines were presently unavailable or were in the process of being revised.

The variables for classifying the guidelines were developed by selecting standards from a sample of six States. The foremost consideration for selecting these States was the quantity of items or standards rather than the quality of their guidelines. States with fewer listings of standards but with new ideas or new outlooks on old ideas were examined and also added to the list of variables. This technique led to a large list of statements.

Ten principal variables were identified: Health, nutrition, fire and safety standards, staff requirements, records, parent involvement, sanitation, equipment, physical facilities, and curriculum. Each of these major categories contained a number of discrete subcategories. The subcategories were defined by lists of items. For ease of documentation, these items were formulated into statements to which "yes," "no," or "no provisions" could be responded. Charts were prepared showing how each of the States' standards related to the items in the universal set. Each chart, therefore, gives an overall visual impression of the way each item is treated in each of the States. The review of standards was completed in 1972 and could be updated; however, it still serves as a useful document of the kinds of program considerations developers must make in order to design models for national replication.

SUBJECT AREA(S)

The subject area is early childhood education; specifically, regulations and guidelines for developing and operating institutional day care in the various States.

INTENDED USERS AND BENEFICIARIES

Program developers, day care operators, and education policymakers are the intended users.

GOAL(S) OR PURPOSE(S)

The goals are to make available, in concise form, the comparative provisions for institutional day care in the various States and to provide a research, information, and reference tool needed for development of replicable early childhood program models.

PATTERNS OF USE

The *Comparison of Provisions* might be used by State and Federal agencies, day care franchisers and other policymakers, and planners as a self-contained reference tool.

ASSESSMENT PROVISIONS

No internal assessment provisions of the validity or comprehensiveness of the materials are provided other than the author's assurances of good research practices.

ASSURANCES AND CLAIMS

No reports of harm have been associated with the use of this material. Since the report was completed in 1972 and State guidelines are constantly changing, it is likely that some information contained in the report is not up to date at this time. However, the author's experience in collecting and analyzing information from the States indicates that it would be difficult to keep a constantly updated version of these materials. For this reason, this document may still be useful as a "best effort" in compiling a large amount of disparate information into concise form.

A CROSSCULTURAL ANALYSIS OF THE CHILD CARE SYSTEM

An overview of child-care systems in the United States, Sweden, Israel, and China

This overview of the structure and operation of child-care systems in four societies (United States, Sweden, Israel, and China) focuses on the child, the parents, the child-care workers, the Government, and private industry. Child care in each of these societies is discussed in terms of individual or group orientation; degree of diffusion of responsibility for children; and contribution of children to group, community, and/or larger society goals. The paper is based on cross-cultural research on childhood socialization; interviews with educators and Government officials; a collection of statistical data and research reports; and visits to day-care centers, schools, and playgrounds.

SUBJECT AREA(S)

Subjects discussed in this paper include: Cross-cultural studies; child-care practices; roles of child, parent, and Government in society; nursery schools and day-care services; mother attitudes toward child care; and child-care workers and training.

INTENDED USERS AND BENEFICIARIES

This overview is intended primarily for persons responsible for planning, implementing, and evaluating child-care programs and services. It is also of interest to social workers, community planners, and researchers.

GOAL(S) OR PURPOSE(S)

To broaden the perspective of directors of child-care programs and services (at National, State, and local levels) by describing alternative ways societies provide for child care and early education.

DAY CARE: AN ABSTRACT BIBLIOGRAPHY
(SUPPLEMENT NO. 1)

A bibliography of documented abstracts of materials in the ERIC system that relate to day care programs

This updated abstract bibliography includes document abstracts from *Research in Education* and citations of journal articles in *Current Index to Journals in Education* from 1969 to 1971. The topics include: Family day care, day-care centers, child development, staff, standards, administration, equipment, parent participation, health services, physical environment, Federal and State aid, and methods of evaluation.

INTENDED USERS AND BENEFICIARIES

This bibliography was prepared to alert day-care teachers and policymakers to materials in the ERIC system related to day-care programs and services. It is also pertinent to researchers, trainers of child-care personnel, program consultants, and students.

GOAL(S) OR PURPOSE(S)

The purpose of this bibliography is to provide a useful list of references on current research studies, day-care programs and services, and standards and legislation in response to a growing number of requests for information on day care.

DISCIPLINE AND BEHAVIOR: AN ABSTRACT BIBLIOGRAPHY

A bibliography of ERIC documents on discipline and behavior modification

This selective bibliography contains references to ERIC documents on discipline and behavior modification of young children. Specific topics include teacher and parent behavior, and classroom practice as related to child behavior and discipline. The citations are divided into five sections: (1) Regular classroom, (2) teacher training and teaching techniques, (3) exceptional child, (4) family, and (5) general. Entries were taken from *Research in Education* (RIE), April 1971 through November 1973, and from *Current Index to Journals in Education* (CIJE), January 1972 through November 1973.

Subject areas of documents cited in this bibliography include. Child discipline in the classroom and at home, effects of adult-child relationships on behavior, behavior modification and positive reinforcement, teacher training and teaching techniques, and behavior problems related to the exceptional child.

INTENDED USERS AND BENEFICIARIES

This bibliography was prepared to alert teachers and parents to materials in the ERIC system related to discipline and behavior. This publication would also be of interest to administrators, social workers, psychologists, and researchers.

GOAL(S) OR PURPOSE(S)

The purpose is to provide a current listing of research reports, guides, and articles in response to requests for information on discipline and behavior.

EARLY CHILDHOOD EDUCATION PROGRAM AND RESEARCH SUPPORT LITERATURE: A STATE OF THE ART REVIEW

A comparison of the results of 19 early childhood programs of the 1960's

The 1960's was an especially active time for the development of early education programs. James O. Miller's report describes the historical and intellectual background of these programs, and it attempts to describe briefly the comparative results achieved by different intervention programs. Miller also presents practical recommendations for subsequent program development from his extensive survey of available programs. The object of the review is to make available the findings, program foundations, and materials which have emanated from these models. Miller found that the early 1960's development of programs in early education was continued and was refined in the latter part of the decade. However, additional programs did not develop as fast after 1968.

The survey contains descriptions of 19 early childhood programs. Each program is discussed according to categories, program foundations, instructional system, delivery, evaluation, installation and maintenance support systems, and recommendations. Miller is former head of the National Laboratory on Early Childhood Education. Miller's information on a great variety of programs is compiled for both the general reader and the researcher.

SUBJECT AREA(S)

Early childhood education: Catalog of replicable models and Literature Survey.

Resumes of model early childhood programs are provided for easy reference and comparison.

INTENDED USERS AND BENEFICIARIES

The intended users are early childhood education researchers, planners and program administrators, and developers.

GOAL(S) OR PURPOSE(S)

The major goal is to provide easy access to the results of educational research and development on early childhood models during the 1960's.

PATTERNS OF USE

The survey is a self-contained book.

ASSURANCES AND CLAIMS

The survey used the following criteria to select programs: (1) The program was developed for preprimary children, ages 3-5, (2) the program had an education component, (3) available literature on the program would support replication, (4) the program is considered "successful" by the developer, (5) "success" is demonstrated in formal reports, and (6) the program was implemented in the 1960's.

An extensive literature search was conducted, and a bibliography of relevant materials was compiled. No reports of intellectual, social, or sexual bias have been received from the survey. The author has made every effort to be careful and conclusive in program presentation of facts and qualification of results. Because the author was dependent upon published materials, it must be cautioned that the survey cannot include all programs implemented in the late 1960's.

EARLY CHILDHOOD INFORMATION UNIT

A multimedia information unit that informs decisionmakers of alternative early childhood educational models for grades pre-K to 3

The *Early Childhood Information Unit* is designed for teachers, administrators, parents, and community people who have the responsibility of reviewing, selecting, and implementing early childhood programs. The unit is developed to inform these decisionmakers about innovative alternatives in the education of young children from preschool through the 3d grade. The unit does not recommend any one program; decisions regarding adoption/adaptation of programs should be made by the local school community in light of local constraints, conditions, and resources. This multimedia information unit contains the following five items.

1. "Reviews of Trends in Early Childhood Education"—This document traces influences in the development of modern approaches to early childhood education.
2. Audiovisual briefings—Each briefing consists of one filmstrip and one audiotape: (a) An introductory briefing, which provides a context for the audiovisual briefings on individual programs and covers some of the major areas in which programs may differ and what to look for in the program briefings; (b) program briefings, each of which is designed to show how the program is carried out in one classroom.
3. Program reports—There is a 20- to 35-page comprehensive report on each of the 8 major programs which contain detailed information on goals and objectives, content and materials, classroom activities, parent involvement, professional and paraprofessional training, administrative requirements and costs, program development and evaluation, and the history of the program.
4. Program summaries—There is a 3- to 6-page summary of each of seven additional programs deserving of the user's consideration.
5. A selected bibliography.

SUBJECT AREA(S)

The subject area is early childhood education.

INTENDED USERS AND BENEFICIARIES

The intended users are school administrators, teachers, and parents concerned with reviewing alternative early childhood models for adoption.

GOAL(S) OR PURPOSE(S)

The purpose is to inform decisionmakers in early childhood education about alternative models.

PATTERNS OF USE

Users are encouraged to follow the review procedure; (1) Review the introductory film, (2) read program summaries, (3) discuss the relevance of programs to local needs, (4) review program briefing, (5) read program report, and (6) discuss and determine the appropriate program to meet local needs.

TIME REQUIREMENTS

Three or four sessions of 1 and 1-1/2 hours each are required.

ASSURANCES AND CLAIMS

The product has been tested with approximately 150 teachers and administrators in early childhood education. Data substantiate claims of knowledge gains and value of the unit.

EARLY CHILDHOOD NEWSLETTERS: A SELECTED GUIDE

A comprehensive listing of early childhood newsletters, journals, and magazines

This document presents a guide to newsletters and other serial publications concerned with topics of interest to educators and researchers working with young children. The guide is divided into three main areas: (1) General early childhood newsletters; (2) special interest newsletters, including newsletters on such topics as bilingual/biracial education, legislative developments, open education, parent education/involvement, special projects, television, and educational trends; and (3) selected journals and magazines. Each newsletter listing contains the title of publication, scope note, price, frequency of publication, approximate number of pages per issue, and ordering address. The same information, except for scope notes and number of pages, is provided for the journals and magazines.

INTENDED USERS AND BENEFICIARIES

This publication was compiled to provide a comprehensive listing of news sources for teachers, teacher trainers, and researchers involved in preschool, kindergarten, and elementary school education.

GOAL(S) OR PURPOSE(S)

The goal of this publication is to make easily available a useful list of early childhood information sources.

EARLY CHILDHOOD RESEARCH: SECOND THOUGHTS AND NEXT STEPS

An overview of early childhood research for those concerned with future planning

This paper reviews recent early childhood research studies and indicates areas in which research is still needed. Project Head Start has had the effect of helping developmental psychology to become more comprehensive and less ethnocentric than previously. Developmental psychologists are now studying infants and toddlers, and the preschool child's total functioning. Educational researchers are currently reacting to the apparent failure of public preschool programs to improve the later school achievement of disadvantaged children. The trend will probably be toward a wider range of options concerning types of early education. Developmental research in early education, involving studies of how and when particular skills and content can best be learned, is necessary to create an effective instructional program. Little research has been done on the developmental characteristics of 3- and 4-year-olds, and few instructional programs have recognized the important role fantasy and spontaneous play have in a child's cognitive development. The scope of research in early childhood education needs to be broadened and put into a more comprehensive developmental framework. Researchers might investigate the child, the child's family, the classroom teaching, the teacher role, institutional setting, and research and the researcher.

SUBJECT AREA(S)

Subjects discussed in this paper include developmental psychology, educational research, and preschool programs and preschool learning.

INTENDED USERS AND BENEFICIARIES

This publication was designed for researchers, administrators, and teacher trainers.

GOAL(S) OR PURPOSE(S)

The purpose of this publication is to present an overview of early childhood research to educators concerned with planning future research.

EDUCATION FOR PARENTS OF PRESCHOOLERS: AN ABSTRACT BIBLIOGRAPHY

Bibliography of 108 ERIC documents on parent education and involvement during children's preschool years

This selective bibliography cites 108 ERIC documents on parent education and parent involvement during the child's preschool years. Included are reports from both home-based and center-based programs (such as Home Start and Head Start). Entries are from *Research in Education* (RIE), October 1970 through April 1974, and from *Current Index to Journals in Education* (CIJE), May 1970 through April 1974.

Subject areas of documents cited in this bibliography include: Parent education, home-based programs and home visiting, parent participation in early childhood education, and parent-child relationship.

INTENDED USERS AND BENEFICIARIES

This bibliography was prepared to alert early childhood teachers and administrators to materials in the ERIC system related to various aspects of parent programs. This publication would also be of interest to researchers, teacher trainers, program consultants, and students.

GOAL(S) OR PURPOSE(S)

The goal of this product is to provide a useful list of references on current research studies, program descriptions, and evaluations in response to numerous requests for information on parent education.

ISSUES AND PROCEDURES IN TESTING YOUNG CHILDREN: ERIC/TM REPORT 37

A report discussing characteristics of children and the limitations of testing when small children are examined

Anyone who uses tests for educational evaluation must be alert to the kinds of decisions which can be made on the basis of test results. Those who work with children must be aware of both the developmental characteristics of children and the limitations of testing when small children are examined. Tests can be valuable sources of data for decisionmaking. The choice of a test will depend on the type of decision to be made. Decisions involving program planning, program evaluation, screening, and administration may require different kinds of instruments; and different criteria should be used in test selection. Some of the criteria outlined are: Timeliness; efficiency; face, content, discriminant, criterion, and edumetric validity; test reliability; and test bias.

This product discusses cognitive, affective, and psychomotor domains in relation to determining which test characteristics are important for a particular educational decision. Some strategies which offer effective ways to obtain more valid assessment data are presented along with comments on alternative methods of testing. Finally, the product stresses the importance of protecting human rights and the rights of children in testing.

SUBJECT AREA(S)

Evaluation, the selection of tests for programs involving young children, and the use of test data for decisionmaking.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers, school administrators, State and local education agencies, program and project directors, program evaluators, novice researchers, and school board members. Primary beneficiaries are school and program administrators.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To translate research and technical information so that it can be applied by practitioners and (2) to present a basic overview of the major issues and problems in testing young children.

ASSURANCES AND CLAIMS

The initial manuscript for this paper was submitted to a number of measurement experts for review. The authors then incorporated their comments and suggestions into a second draft which was reviewed in a similar manner.

DISCUSSION GUIDE FOR PARENT GROUPS, BASED ON 58 CHILD DEVELOPMENTAL COMPETENCIES FOR USE WITH HOME-ORIENTED PRESCHOOL PROGRAMS

Two resource documents, a parent guide and a parent coordinator guide, to increase parent effectiveness in fostering learning and development in their preschool children

The *Discussion Guide for Parent Groups* is two resource documents for home-oriented, early childhood education programs: *Parent Coordinator Guide* and a *Parent Guide*. It has as its aims: (1) To assist parents in organizing and operating regular parent meetings that focus on their young children's learning and development; (2) to provide professionally sound perspectives on issues that relate to young children; e.g., health, discipline, nutrition, growth and development of the child, childrearing, interests of the adult and child, parents' roles, budgeting family money, understanding child's play, concepts, and community resources; and (3) to motivate the parent to participate in the parent group by providing for the parent's own needs through interesting adult crafts and activities. Some meetings will be primarily discussion among parents, and others will use guest resource persons such as physicians, special educators, and nutritionists. Social times and business activities are provided for in the guide. Perspectives on issues that relate to young children are structured on the basis of 58 child developmental competencies to direct parental attention to the range of developmental issues which they may encounter and to alert them to developmental progressions.

The materials were developed in recognition of the recent dramatic increase in programs emphasizing parents' involvement in their children's learning and development. A survey revealed the need for materials that were empirically based and oriented to having parents take an active role as the child's teacher. It is recognized that the parent group can play a vital role in early childhood programs, particularly when coupled with specific training of the individual parents to work with their own children.

The *Parent Coordinator Guide* is used by a professional to assist parent groups in organization and operation. Although the coordinator may need to help start groups, the coordinator does not operate the groups; the parents do. The *Parent Guide* explains to parents the importance of their participation in their child's learning and provides suggestions for the conduct of parent meetings. Both guides contain a common group of materials on field trips, activities, possible topics for parent meetings, and adult crafts.

SUBJECT AREA(S)

Subject areas include early childhood development and its promotion through parent involvement.

INTENDED USERS AND BENEFICIARIES

The intended users are parents of children in home-oriented preschool education.

GOAL(S) OR PURPOSE(S)

The purpose of the guides is to enhance the parent's effectiveness as the child's teacher by creating a parent group which provides the parent with a sounding board, mutual support, and information about the young child.

PATTERNS OF USE

Several patterns of group organization are considered. A paraprofessional home visitor may serve as leader, parents may elect leaders or have a rotating leadership, or a professional's services may be engaged.

ASSESSMENT PROVISIONS

Assessment provisions are not provided. These should be developed during 1976 if the necessary support is provided.

TIME REQUIREMENTS

Meetings may be weekly, biweekly, or monthly, usually for about 1-1/2 hours.

IMPLEMENTATION PROCEDURES

A professional coordinator is required to service the parent groups in a region. This person will normally have other responsibilities in a home-oriented effort in addition to these. Meetings may be held in the neighborhood school

RD 050 056

or other available spaces. It is important to find a "neutral location" in the community.

Personnel Required for Product Adoption and Implementation

One professional parent group coordinator is required for a large county school system. This will normally be a master's level person, skilled in interpersonal processes, child development, and administration.

ASSURANCES AND CLAIMS

Assurances and claims cannot be made until the materials are field tested. All reasonable efforts have been made to design these products to be physically and psychologically harmless and without sex, racial, or other social bias. They will be ready by 1976 and tested if support is provided.

HEAD START AND FOLLOW THROUGH, 1972-1974: AN ERIC ABSTRACT BIBLIOGRAPHY

A bibliography of 123 ERIC documents on the Head Start and Follow Through programs

This selective abstract bibliography cites 123 recent ERIC documents about Project Head Start and Project Follow Through. Included are reports of research, evaluation, and program descriptions. Entries were taken from *Research in Education* (RIE) and from *Current Index to Journals in Education* (CIJE), January 1972 through August 1974. The bibliography is divided into three sections: Head Start, Head Start Test Collection, and Follow Through.

SUBJECT AREA(S)

Subject areas of documents cited in this bibliography include: (1) Federal program descriptions and program evaluation, (2) measurement instruments and preschool tests, (3) intervention programs for young children, and (4) child development and parent participation.

INTENDED USERS AND BENEFICIARIES

This bibliography was compiled to alert policymakers, child care center directors, teachers, and researchers to materials in the ERIC system related to the development and progress of Federal compensatory education programs for young children.

GOAL(S) OR PURPOSE(S)

The goal of this bibliography is to provide references to recent programs, research, evaluation reports, and measurement instruments related to Projects Head Start and Follow Through.

INFANT EDUCATION AND STIMULATION (BIRTH TO 3 YEARS): A BIBLIOGRAPHY

A bibliography of research reports on infant education and stimulation

This extensive bibliography provides references to programs and persons responsible for shaping ideas and practices relating to infant stimulation, education, and assessment of such efforts. The references are divided into six topics: (1) Curriculums for infant education programs; (2) materials for the education and training of caregivers and teachers of infants; (3) descriptions and research reports of infant stimulation and education projects or experiments; (4) monitoring infant development and education projects—testing and evaluation; (5) infant care and development references useful for background knowledge on infant care and education; and (6) equipment, health, and environmental characteristics and standards for infant-care settings.

SUBJECT AREA(S)

The subject areas of documents cited in this bibliography include: Infants; infant stimulation; training of child-care workers; and standards, evaluation, curriculum, and equipment for infant programs.

INTENDED USERS AND BENEFICIARIES

This bibliography was prepared to alert directors of infant and toddler programs, teacher trainers, and teachers to materials concerning infant care and stimulation. It also would be of interest to researchers, program consultants, psychologists and social workers, and parents.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to provide a bibliography of research reports and articles on infant education and stimulation.

CURRENT RESEARCH AND PERSPECTIVES IN OPEN EDUCATION

A publication of selected presentations of a National Conference on Open Education

This document stimulates further study of open education. The publication is an edited version of selected presentations and panels of the American Association of Elementary-Kindergarten-Nursery Educators' National Research Conference on Open Education. Conference papers include the following: "Current Research in Open Informal Education," "Search and Research," "Research and Assessment Strategy," "Open Education and Internal Locus of Control," and "Practical Applications of Research." Two additional papers presented by the directors of the ERIC Clearinghouse on Teacher Education and the ERIC Clearinghouse on Early Childhood Education concern problems and issues in research on open education and preparing educational personnel for open schools.

SUBJECT AREA(S)

Subject area is recent research on open education.

INTENDED USERS AND BENEFICIARIES

This document will be of value to the entire educational community concerned with the improvement of education by practicing the open education concept. The publication has a potentiality for moving people toward further research and experimentation to find ways to attain the potentialities of the concept.

GOAL(S) OR PURPOSE(S)

The document serves to provide a broad perspective on open education research. and to highlight the strengths of the open education concept and provide some thoughtful reservations.

MOVEMENT EDUCATION FOR PRESCHOOL PROGRAMS (NATIONAL PROGRAM ON EARLY CHILDHOOD EDUCATION)

An illustrated discussion of physical exercise needs of preschool children

The need to develop inschool programs of movement education for young children is described in this nontechnical and thoroughly illustrated book. The book is intended for teachers, parents, and the general public. It discusses the value and variety of movement experiences and the importance of fostering them throughout life. Many photographs of children using their bodies in various ways add significantly to the text. The normal child's movement needs are explored and identified. Some requirements for an instructional program which will meet these needs are suggested.

The book was intended to be one component of a movement education curriculum to include activities, teacher training, resource materials, and recordkeeping procedures. However, funding for the project was phased out before development was complete.

SUBJECT AREA(S)

The subject area is early childhood education; specifically program rationale and guidelines.

INTENDED USERS AND BENEFICIARIES

Teachers and parents of preschool children and the general public are the intended users.

GOAL(S) OR PURPOSE(S)

The purpose of this book is to bring about greater awareness of the need for programs to promote movement education for normal preschool children.

PATTERNS OF USE

This product is a self-contained book of information which may be read and applied in almost any everyday situation.

TIME REQUIREMENTS

Approximately 1 hour of reading time is required.

ASSURANCES AND CLAIMS

CEMREL, Inc., has received no reports of harm resulting from the use of these materials. The authors have attempted to be fair and unbiased in presenting their ideas. The rationale for a movement education program was based upon surveys of available curriculum materials and upon the experience of the product developers in teaching movement and movement theory to children and adults. The product developers all taught at the Movement Behavior Laboratory at the University of California, Los Angeles. It was concluded that a preschool movement program based on the basic phenomena of force, space, and time and set in a context that would introduce movement experiences through play would contribute significantly to a field dominated (when planned experiences are introduced at all) by physical development games or creative expressiveness through dance. Program development was begun to meet this identified need, but funds were phased out before testing, evaluation, and revision could be completed. Therefore, the primary claim was made for this rationale is that is articulates a need still unmet in early childhood education.

NEW DIRECTIONS FOR EARLY CHILD DEVELOPMENT PROGRAMS: SOME FINDINGS FROM RESEARCH

An overview of preschool studies and programs of the 1960's

Information on the preschool years, which has emerged from the pioneering studies and programs of the 1960's, is reviewed and interpreted with regard to implications for current and future policy. Limitations of knowledge in this area are noted and attributed to inadequacies in the related research. Four general findings are reviewed and discussed:

1. The importance of the first 6 years of life incorporates research on prenatal development and infants' motor, cognitive, and linguistic abilities.
2. There exists a diverse technology for teaching families of young children. Included are an overview of experimental programs concerned with cognitive development and school achievement, a review of the Head Start literature, and a tentative comparison of the relative effectiveness of different approaches to early experience derived from the Planned Variation Study.
3. Continuity of human development is vital to maximize program effects. Methods are suggested that might provide continuity between preschool and primary school experiences.
4. The importance of multiple influences on children is reaffirmed. There is a need for alternatives that strengthen the family as the primary childrearing agent, instead of encouraging families to place their children in day care.

Subjects discussed in this paper include: early experience and preschool programs; research on preschool learning, cognitive and motor development; compensatory education; home visits and parenthood education; family and special influence on young children; and educational innovation.

INTENDED USERS AND BENEFICIARIES

This program is designed for educators, administrators, and policymakers responsible for planning and implementing early childhood programs. It is also of interest to teachers and other personnel involved in these programs.

GOAL(S) OR PURPOSE(S)

The purpose of this program is to present an overview of what has been learned from the experimental studies and programs of the 1960's and to suggest directions for early childhood programs in future years.

NINE MODEL PROGRAMS FOR YOUNG CHILDREN

A two-volume survey of nine model preschool programs

This two-volume information survey provides descriptions and sample materials on nine preschool programs. The book can be used by day care implementers and other school decisionmakers to decide which programs are most applicable to their needs, teaching philosophy, and situation. Five types of programs are surveyed: Open classroom, bilingual, structured classroom, individualized, and noninstitutional.

Each model program is discussed in terms of its basic philosophy, instructional system, installation and maintenance systems, and evaluation. The criteria for selecting programs for the survey were that they be well defined, easily transportable, within reasonable economic reach, and consistent in attaining positive educational goals. Also, programs were selected from categories that would illustrate the current diversity of educational approaches. The programs chosen are for 4- to 6-year-old children, although particular programs might extend above or below this general age group. The choice of population was intended deliberately to span the preschool and early elementary years because it was felt that local initiative could be encouraged and institutional innovation simultaneously fostered by focusing on programs that could be applied either by interested community groups or through the more formal channels of the educational system.

Nearly all the programs surveyed were disseminated as part of the national Follow Through Program. The programs included are: Tucson Early Education Model, Education Development Center Approach, Bilingual Early Childhood Program (Southwest Educational Development Laboratory), The Oral Language Program (Southwestern Cooperative Educational Laboratory), The DARCEE/NPECE Preschool Program, The Behavior Analysis Plan, The Responsive Model Program, The Primary Education Project, and The Florida Parent Education Approach.

SUBJECT AREA(S)

The subject area is early childhood education; specifically, a literature survey of available program models.

INTENDED USERS AND BENEFICIARIES

The intended users are day care implementers, school administrators, community groups, and teachers interested in choosing among available early education models.

GOAL(S) OR PURPOSE(S)

The major goal is to provide a tool by which school decisionmakers can make informed choices among early education programs and can choose programs (or a variety of programs) based on the educational philosophies, physical requirements, materials, and costs inherent in them.

PATTERNS OF USE

The program is printed in two volumes. The first volume contains program résumés and comparative information. The second volume includes samples of lessons and other actual classroom materials typical of each program reviewed. The two volumes are a self-contained information resource for selecting and evaluating sample programs.

ASSURANCES AND CLAIMS

The developers have not received any reports of harm associated with the use of this product. Programs selected for review were largely those developed out of the Follow Through Program and were, therefore, required to meet all Federal standards of fairness, social equality, and effectiveness during their development and installation.

NOTES ON THE DISTINCTION BETWEEN EDUCATION AND EXCITEMENT

A comparison of the educational outcomes of alternative teaching methods

This paper suggests that, under the influence of curriculum developers, research and development disseminators, and general cultural influences, teachers of young children too often perceive that part of their role is to keep their children excited (at a high level of responsiveness) or "turned on." This perception can lead to child dependence on and expectation of adult-induced excitement, absence of opportunity for children to learn to engage in sustained work, and teacher reliance on superficial tricks and gimmicks. It is recommended that teachers encourage the children to participate in sustained activities that have more lasting educational value.

Subjects discussed in this paper include: Early childhood educational theories, teaching techniques, teacher role and responsibility, classroom environment, learning activities, and student responses.

INTENDED USERS AND BENEFICIARIES

This paper is designed to make teachers and child caregivers aware of some of the implications of various teaching techniques. Administrators, curriculum developers, and teacher trainers would also find this paper of interest.

GOAL(S) OR PURPOSE(S)

The purpose of this paper is to caution early childhood educators about confusing education with excitement, thereby cheating children of opportunities to gain satisfaction from sustained efforts.

PARENTING MATERIALS INFORMATION CENTER (PMIC)

A system for the collection and dissemination of parenting materials in basic child care practices

The purpose of the *Parenting Materials Information Center* is to gather, analyze, and disseminate information about parenting materials, programs, and resources—both those currently available and those in varying stages of development. Individual items such as books, pamphlets, booklets, films, filmstrips, video tapes, slides, and audiotapes are included as well as sets of materials or total programs which include a variety of individual items.

The program is designed to bridge the gap that exists between the "producers" of parenting materials (often small local projects without access to a distribution network) and the "consumers," parents, and those working with parents in improving parenting skills and knowledge in basic child care practices. Although some materials and program ideas for use in parent training and training of adults who work with children do exist, presently they are scattered, and for the most part, are known and used primarily at the local level—often by the originators at a given community site or school district. Thus, the materials are largely inaccessible. With the increased interest and emphasis on inclusion of parents, particularly parents of young children, in the educational development of their children, the need for information and access about existing materials has increased greatly.

Identifying, collecting, and cataloging of parenting materials, programs, and resources were initiated in February 1974 and are a continuing process. The PMIC uses a process of analysis to provide nonevaluative information about the characteristics of each material included in the collection. This information is recorded on a standard form, which also includes indexing data by means of descriptor terms specifying the content area, age/developmental level, format of materials, target audience, and other characteristics such as language, reading difficulty, and availability.

Intermediate products currently available include a guide to the materials collected, listed alphabetically within format classifications (e.g., books, booklets, programs, and audiovisual materials). The first listing and two supplements have been printed, and guides to the materials collected are being compiled by major content areas. A pilot version of the *User's Handbook and Descriptor Dictionary* has been prepared for developmental purposes only; it is not available for wide distribution.

SUBJECT AREA(S)

Materials are being collected in the following major content areas related to parenting: Preacademic contents, child abuse and neglect, discipline, early childhood activities and play, exceptional children, family, group relations and training, health care and safety education, language and intellectual development, multiethnic/multicultural heritage and contents, parent/school/community involvement, parenting education, physical development, pregnancy and birth, sexual development and education, and social-emotional development.

INTENDED USERS AND BENEFICIARIES

The primary users of the *Information Center* are those working with parents. They include professionals and paraprofessionals in charge of planning and/or conducting parent involvement/parent participation activities. Also included are professionals and paraprofessionals engaged in home-based child-care/child-development programs, as well as parents and professionals and paraprofessionals in the social services (e.g., health, welfare, and adult and career education) who work with self-development of parents as individuals. Other professionals involved in training teachers and paraprofessionals can also use the PMIC to get information about parenting materials. Finally, users will be the parents themselves, for use in their roles as advisers and decisionmakers in programs, as well as for their own personal and family development.

GOAL(S) OR PURPOSE(S)

The overall purpose of the PMIC is to gather, analyze, and disseminate information about parenting materials, programs, and resources. The solution strategy is to develop and research a model which provides personnel from local communities, school districts, and early education programs with: Analytical information about materials, programs, and resources; an information retrieval system to search for specific types of materials contained in the collection; a guide for effective dissemination strategies for information about parenting materials; and documentation on how to set up and maintain the model center.

The intermediate goal is to develop specific products which include alphabetical listings of materials collected and major content area guides which include annotated bibliographies.

PATTERNS OF USE

The products currently available can be used in multiple ways. They can be used: (1) As an informational source of the range of materials currently available, (2) as a detailed guide for purchase of materials, (3) as a nearly complete source for teacher education courses, (4) as supplementary information sources for parenting training workshops, and (5) as a way to identify areas in which materials can be developed to meet special needs.

ASSESSMENT PROVISIONS

Formative evaluation data are being collected on the format and comprehensiveness of the materials compiled. Field data are being collected from individuals using the initial versions, and formative data are being collected on the analysis process and the indexing vocabulary.

When the prototype is established, formative data and feedback will be obtained from actual users in Austin, Texas, and from mail requests from other parts of the country.

A prototype version of the product retrieval system will be in operation by November 1975 using an Optical Coincidence System. Ultimately, this retrieval system will serve as a model to be duplicated and transported as a unit, together with the documentation prepared for the materials collected. In addition to the data base and the retrieval system, a guide to effective dissemination strategies for information about parenting materials will be available.

The current user is any adult who works directly or indirectly with parents of young children. The person reviews the available listings to select the materials that seem most appropriate. Cost and availability information are provided in the listings. Once the prototype is operational, it will be possible for users to state their needs for information in great detail, including content areas, formats, target audiences, age/developmental level, and language and reading difficulty levels.

Once this information is expressed in the indexing language of the system, a listing of the materials in the collection, meeting those requirements, is obtained. With this list, the user can examine the information sheets prepared for each item in the collection. Information sheets contain detailed analytical, nonevaluative data about the materials to assist the user in making decisions about adoption, use, or purchase.

TIME REQUIREMENTS

Time requirements vary in relation to the user's purpose in using the manuals.

IMPLEMENTATION PROCEDURES

No special equipment or facilities, services, or organizations are required for use of current products.

As development of the transportable retrieval system is completed, special equipment, as well as training, will be required. This information is not presently available.

MATERIALS AND EQUIPMENT

No special equipment and/or personnel are required for current products.

As development of the transportable retrieval system is completed, information on materials, equipment, and requirements will be made available.

ASSURANCES AND CLAIMS

No reports have been received indicating that the current products induce any type of harm or include social inequities.

Within the first 3 months of availability of the manual of materials collected, more than 150 copies were distributed to individuals in 36 States.

DEVELOPER/AUTHOR:

Southwest Educational Development Laboratory

PSYCHOLOGICAL PERSPECTIVES AND EARLY CHILDHOOD EDUCATION: SOME RELATIONS BETWEEN THEORY AND PRACTICE

Three approaches to psychological programing in early childhood education

This paper delineates some of the central issues confronting psychologists and educators in the application of psychological theory and research to early childhood education. Three approaches to early childhood programing are presented: The behavioristic-learning theory perspective, the Piagetian cognitive-developmental, and the developmental-interaction approach. The differing assumptions on which they are based, the differing ways in which they draw on and utilize psychological concepts, and the ways in which they involve young children in qualitatively different encounters with people, problems, and ideas in the school setting are examined and critically evaluated. The final section of the paper is concerned with a summary statement of the issues arising in the discussion of the three approaches to early childhood education, including a consideration of some of the problems to be considered in evaluating effects of differing modes of education.

SUBJECT AREA(S)

Subject areas of documents cited in this paper include: Educational theories and program descriptions, educational objectives and program evaluation, developmental psychology and psychoeducational processes, and cognitive and social development.

INTENDED USERS AND BENEFICIARIES

This paper is intended primarily for administrators, teachers, teacher trainers, and researchers responsible for implementing and evaluating early childhood education programs.

GOAL(S) OR PURPOSE(S)

To provide background information for teachers and administrators on the relationship of psychological theory and research to practices in education.

RESPONSIVE CARE CLASSROOM: SOURCE BOOKS AND A HANDBOOK FOR ADMINISTRATORS

An administrator's handbook and three sourcebooks for running a preschool for children from ages 3 to 6

Responsive Care Classroom is an open-classroom model which emphasizes child-initiated activities in a creative environment. The goal of the program is to increase each child's behavior repertoire by providing options for many activities and by extending children's experiences within the context of self-chosen activities. When a child is immersed in an activity, a teacher observes behavior. The teacher then asks a question, makes a comment or suggestion, or manipulates a material or in some other way participates in the child's activity. While the initial interest is provided by the child, the teacher's intervention helps in finding new approaches or meanings for the experiences.

An essential feature of *Responsive Care Classroom* is its division of space into clearly demarcated areas for large-motor, expressive, and task-oriented activities. The developers believe that a program based on spatial organization, rather than on a time schedule, can better accommodate the varying interests and activity levels of individual children.

Development of the responsive care program was concluded in November 1973, at which time funds were phased out. The materials offered here represent the completed portions of the model at the time development ended.

A series of three sourcebooks was developed which present ideas on how equipment and materials can be used in each of the three spatial areas of the classroom. *I Can Do It* presents activity and equipment suggestions for the active area. *And So There Was Me* describes creative art experiences for the expressive area. *A Space To Discover Me* includes information, organizational principles, and suggested equipment for the task area. Each sourcebook includes not just sample activities but also suggested strategies for responsive teaching.

A completed draft of *A Handbook for Administrators* was written. It includes all the information needed to set up and operate an abbreviated responsive care program. This handbook also includes a sample child assessment record, a list of needed materials, ideas for parent involvement, and staff training materials.

SUBJECT AREA(S)

The subject area is early childhood education; specifically curriculum materials replicable model.

INTENDED USERS AND BENEFICIARIES

The intended users are teachers and administrators of day care centers, nursery schools, and kindergarten children, 3-6 years old, in organized care settings.

GOAL(S) OR PURPOSE(S)

The purpose of this handbook is to make available an innovative and valuable alternative to preschool education.

PATTERNS OF USE

The administrator's handbook gives guidelines for running a complete preschool model, adaptable to many children and classroom situations. The three sourcebooks can serve as teachers' handbooks for running the activity areas of the *Responsive Care Classroom*, or they can be used separately to provide activity ideas and teaching strategies in any preschool classroom.

ASSESSMENT PROVISIONS

Although specific testing procedures are not tied into the operation of the responsive care program, the evaluation design included a plan to use several commercial and specifically developed tests.

Recordkeeping is an important part of the responsive care program. Teachers keep individual written records for each child, and they record incidents or statements made by children which indicate the extent of the children's behavior repertoires. These records allow teachers to assess children's progress and to plan needed ways to expand their behavior repertoire into other areas.

IMPLEMENTATION PROCEDURES

Model installation staffs for the responsive care program were to receive intensive training—a 1-week work/training session for the director at an operating responsive care site, a 2- to 3-week preservice session for teachers conducted by the director, and inservice training throughout the first year. Since outside training is not available, directors who wish to implement the abbreviated responsive care program would need to read the administrator's handbook carefully and, from it, plan a 3- to 10-day training session for staff members. Ideas for planning such a training session are included in the administrator's handbook.

ASSURANCES AND CLAIMS

Since the plan to pilot test and evaluate the responsive care program was not carried out, no claims can be made about its replicability. At the development site, teachers and children who used the model appeared to enjoy it and not be negatively affected. Although testing of the model's transportability was not completed, the developers feel that a reasonable approximation of the *Responsive Care Classroom* (an abbreviated version) could be achieved by applying the principles laid out in the administrator's handbook.

REVIEW AND INDEX TO TESTS AND MEASUREMENTS FOR EARLY CHILDHOOD EDUCATION

An index and reference of 800 early childhood-assessment tests for children from birth to 8 years

Review and Index to Tests and Measurements for Early Childhood Education is an index and reference list of 800 tests and measurements that can be used with children from birth through the age of 8. The reference list provides the user with summary information about each listing. In addition to the title and acronym of the test or measurement, information about the author, source, cost, publication date, administration time, number of forms, applicable age range, form of administration, key descriptors, reliability, validity, and normative data is supplied for each entry.

All of these individual entries are collected in four indexes. Each provides a different point of entry to permit information retrieval by users with diverse requirements. The indexes include a title index with entries arranged alphabetically, an author index similarly arranged, an age-range index listing entries by their appropriate age for administrators, and an index of descriptors which collects all of the entries under each descriptor.

Coupled with this descriptive listing of individual entries, the review will also provide information on item content and ways of responding to test items. In this two-way classification system, item content refers to what tests intend to measure; for example, a test might measure a child's reactions to a novel situation, or his feeling of self-worth, or his ability to sequence the events of a story in logical order. The index organizes these categories of test content into four "domains" that correspond to four kinds of objectives found in early childhood education programs—the affective, cognitive, psychomotor, and subject matter domains.

The second dimension for classifying items (response methods) refers to the kinds of tasks children must perform as they react to a test item. For example, to measure a child's knowledge of the color red, one test might ask the child to provide the verbal label for this color when shown a red paper; another test might ask the child to select from a group of differently colored papers the one that is red—in this case, with the verbal label supplied by the tester; still another test might ask the child to select from a group of differently colored papers one that is the same color as a paper shown by the tester, with no verbal level being used for the color at all.

The index defines 15 response methods. Using this two-way classification scheme, a profile based on individual items will be available for each entry in the index.

SUBJECT AREA(S)

The subject area is tests and measurements.

This index and reference focuses on early childhood assessment, item classification, and measurement procedures.

INTENDED USERS AND BENEFICIARIES

The *Review and Index to Tests and Measurements for Early Childhood Education* is intended to be used by program developers, evaluators in early education, curriculum supervisors in school districts and in State government, and researchers interested in problems of criterion-referenced assessment.

GOAL(S) OR PURPOSE(S)

The goals are: (1) To provide in a single, conveniently organized source a large number of tests and measurements used in early childhood assessment; (2) to call attention to the variety of assessment procedures which could be used in preschool assessment; and (3) to stimulate the development of new tests which use the full range of response methods relevant to the objective of early education.

ASSURANCES AND CLAIMS

The *Review and Index to Tests and Measurements for Early Childhood Education* is an information source and a research tool. It provides what is probably the most comprehensive single source of available tests and measures in early education. In constructing the index, publisher's catalogs and other published test compilations were reviewed. Augmenting these secondary sources was a search of the specialized listings available at the Test

Collection Library at the Educational Testing Service (ETS).

Researchers at ETS were both encouraging and enthusiastic about the test index. In addition, based on a short article in the CEMREL Newsletter in 1972, CEMREL, Inc., has received more than 250 requests for the published index. From these responses, it is believed that the index would serve a useful purpose for researchers, program designers, teachers, and other persons interested in the field of early childhood education tests and measurements.

DEVELOPER/AUTHOR:

CEMREL, Inc.
(Formerly Central Midwestern Regional Educational Laboratory)
3120 59th St.
St. Louis, Mo. 63139

Thomas Johnson, Project Director
Paul Owoc, Product Developer

AVAILABILITY

The test listing is complete in draft form. It exists on IBM punch cards, and would require editing and printing to be made available for public use.

A manual to reliably classify item types has been written, but item classification has not begun. Copies of the test index and item classification are not available at this time. The materials that now exist are copyrighted.

SELF-CONCEPT: AN ABSTRACT BIBLIOGRAPHY

An annotated bibliography of ERIC documents dealing with development of self-concept in young children

This annotated bibliography cites ERIC documents which deal with the development of self-concept in young children. Entries are from *Research in Education* (RIE), August 1970 through April 1974, and from *Current Index to Journals in Education* (CIJE), April 1970 through March 1974. Topics included are sex differences, socioeconomic status, personality development, parent-child relationships, student-teacher relationship, ethnic groups, racial attitudes, tutorial programs, and special education.

SUBJECT AREA(S)

Subject areas of documents cited in this bibliography include: Children's self-concept and personality development; relationship of sex, socioeconomic status, and race to children's self-esteem; and influence of parents and teachers on children's self-concept.

INTENDED USERS AND BENEFICIARIES

This bibliography was compiled to alert teachers, researchers, psychologists, social workers, and parents to materials in the ERIC system related to the development of children's self-concept and personality.

GOAL(S) OR PURPOSE(S)

To provide a useful list of references on current research and other materials on the development of self-concept in children.

WORKING WITH PARENTS IN THE PRIMARY SCHOOL

An annotated bibliography of ERIC documents on parent participation at the primary school level

This selective annotated bibliography cites recent ERIC documents on parent participation at the primary school level. Entries are from *Research in Education* (RIE) and *Current Index to Journals in Education* (CIJE), January 1970 through May 1974. The two major topics reviewed are parent-teacher cooperation for children's education, and parent involvement in decisionmaking in the schools.

SUBJECT AREA(S)

The subject areas of documents cited in this bibliography include: Parent-teacher cooperation, parent participation in the primary and elementary school, parent-teacher conferences, and parent education.

INTENDED USERS AND BENEFICIARIES

This bibliography was prepared to alert elementary schoolteachers, administrators, community workers, and parents to materials in the ERIC system on parent participation in decisionmaking in the schools, parent-teacher cooperation, and parent involvement in children's learning.

GOAL(S) OR PURPOSE(S)

The purpose of this document is to provide a useful list of references on existing parent involvment programs and training activities in response to numerous requests for information. This bibliography would help educators and community workers to involve parents and other citizens in children's education, a major thrust of the Elementary and Secondary Education Act.

EDUCATION AND WORK
(CAREER EDUCATION)

Administration and Staff Development
Career Awareness and Exploration
Career Counseling
Work Experience-Based Programs

OVERVIEW

LARRY J. McCLURE
Northwest Regional Educational Laboratory
Portland, Oregon

The issues surrounding the relationship between education and work present a complex picture with many problems and some solutions. Many of the problems reflect a dichotomized culture that separates groups in society one from the other. Although education may illuminate the parallel phenomena of social and professional isolation and separatism existing in society—characterized by the gaps between generations, the lack of communication between labor and management, the isolation of schools from the activities of the community—it cannot, by itself, close the gaps.

Education, however, can do many things to help people in their planning and development of careers. The National Institute of Education's Education and Work Group has identified nine areas where educators can successfully intervene in preparing students for the world of work. Education can help people:

- become more aware of the role of work in their lives and in our economy
- become better informed about the nature and requirements of different occupations, and the education and experience needed to enter and progress in these
- acquire self-knowledge in relation to different occupational futures
- avoid socializing the next generation into limiting occupational stereotypes and overcome self-imposed limitations on career choice due to socialization by others
- improve their ability to make reasonable career decisions and develop career plans that will help them reach their occupational goals insofar as this is possible
- develop the skills, abilities, and attitudes needed to enter and progress in careers
- acquire certification of abilities and skills obtained through formal and nonformal learning experiences
- bring together opportunities for continued education and for work with individuals ready for these opportunities
- insure continued access to the information and education needed for career development throughout life.

This *Catalog* has divided the field of Education and Work (Career Education) into four focal areas: Administration and Staff Development, Career Awareness and Exploration, Career Counseling, and Work-Experience-Based Programs. These areas provide the reader with organizing points rather than a full conceptualization of the field.

Dr. Larry J. McClure is an Associate engaged in educational research at the Northwest Regional Educational Laboratory, Portland, Oregon.

ADMINISTRATION AND STAFF DEVELOPMENT

Problems facing career educators

Several barriers hamper the implementation of career education programs. Child labor laws have been viewed by employers and labor leaders as roadblocks to hiring young students. Career educators need to develop a thorough understanding of what can be accomplished by working closely with those who advocate, write, and administer the laws. Critics have expressed concern that career education forces young people to make premature career choices ignoring human needs that are not directly job related. Career educators should anticipate and be prepared to answer such criticisms, explaining the goals of career education programs.

A major issue facing primarily the administrators of career education programs is the problem of communication among the institutions that are charged with preparing students for the world of work. What communication channels are needed, for example, between local high schools and area community junior colleges and vocational-technical centers to assure smooth student transition and to avoid duplication in programs? A need for planning and continuity is critical at all levels of education and career development. This need is reflected in the "stages" of the career education process identified by educators.

Administrators and staff usually request equipment, materials, and other assistance from businessmen; but now career educators are requesting help from the entire community—parents, senior citizens, volunteers, union officials, governmental organizations, and social service agencies. Community willingness to cooperate with schools in some cities has required the establishment of special offices and clearinghouses to coordinate these efforts.

Due to these demands, program administrators are careful to specify how they want to involve people, organizations, and businesses. Strategy may require forming advisory groups composed of parents, businessmen, and community leaders, to seek their advice and their approval of various programs. This process should be an ongoing working relationship.

Facilities

Several questions face administrators concerning needed facilities. One alternative—building career educational facilities and buying the latest equipment—naturally costs a great deal. However, it allows for carefully controlled learning conditions. Another alternative—remolding and using donated equipment—is probably the more common approach. A third alternative, however, is to expand the cooperative education concept and see how far the community is willing to go in providing resources and a broad range of facilities. For example, newer secondary schools emphasize the interrelatedness of disciplines by physically placing electronics, physics, science, and technology classrooms and labs in close proximity and encouraging student and faculty interaction. It is clear that centralized, specialized facilities enable students to enjoy individual attention, using instructors with real-world experience and equipment that students will likely encounter on the job.

Leadership and staffing

The principal remains the key person who decides whether and how career education is implemented at the local school level. Principals decide which teachers will be involved in and responsible for career education courses. In addition to the principal, a wide variety of resource personnel—community volunteers, teacher aides, paraprofessionals, artists-in-residence—can contribute to programs, assuming "teaching" roles after receiving inservice training.

NIE products

Because of the need to orient and train administrators, teachers, and counselors in career education programs, the Education and Work Group at NIE has sponsored research that has resulted in a variety of products to address these needs. For practical instructions to assist administrators in examining these programs, several products—such as *The Administration of Career Education, The Community and School Based Career Education,* and *Attitudes Toward Career Education*—are presented in this *Catalog.* Similarly, some products are focused on the specific needs of teachers in providing career orientation and promoting student awareness, including *Staff Awareness: Racial, Socioeconomic, Sex Stereotypes, Limited Career Potential and An Orientation to Career Education—Group Approach,* and *Teacher Aides in Career Education.* Products range from the elementary level (e.g., *Staff Development in Career Education for the Elementary School*) to the secondary level (e.g., *Career Initiation When Alienation From Secondary School Occurs*).

Several other products synthesize the literature and are relevant to all personnel concerned with career programs. Examples are *The Roles of the Teacher, the Counselor, the Community and Media in Career Education* and the *Module Development Handbook* which assists teachers, educators, and administrators to develop instructional modules. The means of involving school personnel and the community, and the kind of resources available are clearly indicated by the product descriptions comprising the Administration and Staff Development section of this *Catalog.*

CAREER AWARENESS AND EXPLORATION

Two choices face career educators as they try to weave career development concepts and activities into existing instructional programs: The first choice is to incorporate a career education program as a separate curriculum content area with little carryover to other areas; the second choice is to weave the program into existing curriculum areas as a regular part of daily lessons throughout all grades. Career education has chosen the second approach, infusion, as the more reasonable and profitable approach for instructional development.

The infusion of a long-range, ongoing career education program could be accomplished by teachers in all subject areas contributing to career awareness and exploration in their classrooms. For example, a language arts teacher could help students fill out application blanks, résumés, and income tax forms; a social studies teacher could bring in union representatives to discuss labor movement history; a math teacher could use the carpenter's square to teach various concepts in trigonometry; a science teacher could talk about environmental careers; and a health and physical education teacher could help students conduct studies of strength versus dexterity versus endurance in selected jobs. A central problem facing administrators and teachers, however, is how to coordinate these efforts to insure that students have broad exposure to career experiences and opportunities.

Most career awareness programs begin during the elementary years where, typically, classes emphasize awareness of goals and objectives. These objectives are concerned with introducing children to the world of work. Children should understand that the choice of a career is a complex matter affecting all of one's life; and, therefore, they should be encouraged to develop positive attitudes toward work. They should understand that a career contributes to their own self-fulfillment and the welfare of the family, community, Nation, and world. This includes an understanding of the economic sector and the relationship of work to one's own economic well-being.

In addition, children should learn to appreciate and respect all workers, regardless of occupation. Objectives include teaching the student to understand the relationship between their current schooling and work, and to understand that sex and race do not have to be barriers in career decisions. Also, the student should understand the different kinds of rewards and job satisfactions people derive from their work, and the reasons why people choose different careers.

Other objectives are designed to foster individual self-awareness. These objectives include maintaining a sense of self-worth and dignity and instilling a desire to accomplish personal goals. Positive attitudes toward others are acquired by understanding how different people must work together to produce most goods and services. In summary, the student must recognize personal abilities, interests, and career potential and understand the influence that others—such as family, peers, and employers—have on work attitudes and values.

Teachers employ a variety of methods to build career awareness. One strategy is encouraging students to examine worker roles in their immediate environment (home, school, community). Another strategy is using a variety of media, methods, outside resources, guest speakers, tapes, pictures, records, books, pamphlets, brochures, and projects that simulate productive work to assist students in career exploration.

The second phase of career development brings the learner face to face with the world of work by observation and hands-on experience. The learner is offered the chance to actually explore various worker roles and working conditions, and to examine the responsibilities, rewards, satisfactions, and even the negative aspects of a variety of career areas.

Many of the same objectives commonly ascribed to the career awareness phase are addressed during the exploration phase with greater specificity. For example, the student can increase his/her previous knowledge by further analyzing the social, personal, and economic significance of different kinds of occupations, thereby gaining a better understanding of the relationships between education, training, and work opportunities. In this phase, the student can formulate initial career goals that require greater self-understanding. By analyzing personal work values, interests, aptitudes, and abilities, the student will recognize the need for developing social skills in addition to decisionmaking and problem-solving skills. This growth and exploration experience will affect the student's self-concept and plans for self-development.

NIE and career awareness and exploration

At NIE, the Education and Work Group has sponsored research and developed instructional materials to expand career awareness and exploration. Since career exploration hinges on close examination, experimentation, or simulation of real-life experiences, the products are oriented toward giving the student a broad range of knowledge and skills. For example, students can relate occupations to mathematics and science, through several guides: *Career Exploration Through Mathematics, Career Exploration in Earth Sciences,* and *Career Exploration in the Life Sciences.* For establishing general career awareness, guides, such as *Economic and Career Awareness* (A, B, C), provide students with information about the family, consumer knowledge, and economic terms.

The teacher can regularly assess and analyze student interests, aptitudes, and abilities by exposing them to courses and guides which focus on careers, ranging from the technical to the artistic professions. These products have been developed to provide students with the necessary awareness, concepts, and skills to explore their interests in a wide variety of available careers.

CAREER COUNSELING

Career development as a lifelong process

The scope of research in career development is extensive; and, like most issues which surround individual growth and social or cultural change, there are significant differences of opinion as to how people reach vocational maturity.

Most people agree that the process begins as early as the preschool years and that, by the time young people reach formal school in the primary and secondary grades, more focused activities can occur. Areas that traditionally have been the target of career development programs include the following: (1) *Awareness* of self and the world "out there"; (2) *exploration* of interest areas that seem to match individual personality attributes and interests; and (3) eventual *preparation* for a career area or a specific job. Career counseling provides the steady support that leads students toward greater self-understanding and eventual self-determination in a world that sometimes seems bewildering.

The dilemma which elementary and secondary school leaders face as they construct a career counseling program is what to do about two additional career development needs that are not carried through in most programs.

Placement and Followthrough

The placement issue is not a problem for students who intend to pursue postsecondary educational opportunities. College placement is a full-time activity in many large high schools today, but for students seeking immediate entry into the world of work, assistance is usually piecemeal. Also, after persons have completed their preparation and have found a place in the world of work, counseling and other educational services decline considerably. Jobholders who would benefit from updating, retraining, and enrichment programs usually find very few programs designed to fit their needs.

While most scholars agree that career development is a process that takes place continuously over the course of one's life, there also appears to be consensus that the developmental stages are not timebound. For example, even though "career awareness" is seen as the primary responsibility of the elementary school, late adolescents, young adults, and even older adults are continuously learning about the world of work and about their relation to it.

Career counseling needs and objectives

The career counseling component for most formal education and work programs is seen as an integrative function. Matching young people with jobs *per se* may not necessarily be a top priority, but may take second place to a series of "process skills" that help individuals reach full productive capacity.

Several factors affect career decisions, such as age, personality, and life goals. For example, some people may choose a career at 17 and stick to it. Others choose careers at age 21, 26, 35, or 40. Some prefer to keep exploring, even as they pursue a college degree.

Factors influencing career choices apparently change too, depending on individual temperament and strength of character. Some jobseekers, for example, may place a higher value on geographical location than monetary return. Others may seek the satisfactions of community service over those of material gain. It is clear, however, that lack of prior exploration and little access to "market information" when coupled with poor choices create dramatic effects on the individual, such as malaise, goallessness, overqualification, and overspecialization.

While most students in American schools today will "make it" with few evident scars, there are many who need help in overcoming particular disadvantages that their peers may not share. Examples include those who are physically or emotionally handicapped, and the economically handicapped; those whose ethnic background may be a constraining factor in obtaining equal access to jobs, housing, and other opportunities; and those whose sex may affect career decisions. Many of these problems will not be solved by educators alone, yet career educators must be aware of the barriers these special groups face as they strive for full participation as citizens in this complex world.

The questions of what institutions should be in the business of providing career counseling and which individuals are best suited to work with clients are crucial ones. Although these questions may never be resolved to everyone's satisfaction, elementary and secondary schools will continue to carry a major share of the load, even though the job is too big for these institutions alone. Career education and its parallel requirement for career-focused counseling and guidance services stretch over many areas and institutions that are potential sources of help: Adult basic education programs, continuing education, broadcast media, business-related associations, churches, community agencies, correspondence courses, postsecondary education, interest groups, libraries, manpower programs, newspapers and magazines, propriety schools, self-instructional programs, tutors, 2-year colleges, volunteer agencies, and youth service agencies. All play an important role in fulfilling the career counseling needs of individuals living in this complex society.

NIE and career counseling

NIE recognizes the importance of counseling as an integral part of any career education program. Its activity in this area is reflected by the range of products that may be found in the Education and Work (Career Counseling) section of this *Catalog*. Another source of product information in this area is the Guidance and Counseling section of the *Catalog*.

WORK EXPERIENCE-BASED PROGRAMS

Before free public education was available to Americans, young people learned the skills that would carry them through their adult lives by working alongside parents, aunts, uncles, grandparents, and willing neighbors. The visible activities of the community created a compelling model, and the transition from adolescence to self-sufficiency necessarily occurred at a fairly young age.

For today's young people, opportunities to sample adult responsibilities are greatly reduced. Affairs of commerce and government are conducted in distant cities and behind office doors. Fathers and mothers work in specialized fields away from the home. Grandparents often live in retirement, forced out of the cultural mainstream of the community. School schedules fill 6 to 8 hours every day, 9 months each year, for at least 8 and usually 12 or more years. The education and career plans of the student often serve to insulate and further compartmentalize the process of learning, and this process occurs distinct from life in the adult community.

In the meantime, career possibilities have multiplied beyond comprehension. Yet for many who find themselves out of school and in the wrong slot, the classroom years seem wasted, the delays seem unnecessary, and the "experience wanted" barrier in finding a job appears difficult to overcome.

Certainly the idea that hands-on experience reinforces the learning of subject matter is not new to education. Successful school programs—such as vocational agriculture, the school band, choir or thespian troupe, or the school newspaper—have existed in the schools for a long time. Simulated, yet closer to reality, are programs like Junior Achievement, where corporations give aspiring business leaders an introduction to finance, production, and marketing.

The advantage of using simulation in the school setting is that it offers an easily controlled psychological climate for learning. However, reality-based learning outside the classroom, while a more radical departure, is likely to offer longer and more personally satisfying results.

Performance as a measure of success

The push for performance-based learning is closely related to the above issues because, in addition to being useful, knowing how to do something *well* contributes directly to individual feelings of self-worth. Competency-based programs which allow individuals to prove that they have mastered a concept or skill are gradually winning favor among educators. In more and more instances in career education, "credit" or advanced placement is awarded on the basis of learning evidenced from experience outside school settings. In some cases, educators are moving from requiring credentials or certificates as evidence of achievement to requiring an individual portfolio of demonstrable skills and knowledge that can be updated continually.

Another interesting phenomenon is the recognition that employers can play an important role in verifying learned competencies. Some programs do not issue certificates of completion, for example, until the student has demonstrated successful on-the-job experience over an extended period of time.

The business view

There was a time when educators were providing career-oriented programs to students with little or no assurance that employers even needed the new workers or the kinds of skills and attitudes that were being taught. These gaps are being closed, primarily by inviting employers of all types—from business, industry, commerce, government—to serve on advisory committees, provide speakers, and sometimes even to instruct students.

Although employers are generally glad to help, they appreciate followup so that their involvement can be used effectively. Also, employers are wary of programs that will bog them down in redtape; they are rightfully concerned, for example, about their liability. Consequently, career educators must be able to explain the advantages as well as the limitations of student activities at worksites.

The union view

Unions have long proved that they are willing partners in efforts to build and install career education programs. As a group, labor union leaders strongly support the notion of continuing education, as well as basic education. They are as concerned as anyone about the quality of educational programs, particularly basic skills development. They recognize the value of liberal education and life skills, not only to handle work responsibilities but also to meet the challenges of the family and community.

The student's view

Most students resent being placed on busywork jobs that are designed to keep them out of the way. Meaningful work experience—at a real job, holding real responsibilities—requires adaptability and flexibility on the part of the students, employers, and educators alike.

Work experience is regarded as a major cornerstone of career education; it may not matter when or where it occurs, but it must be available. Young people are most rejected for jobs because they do not have work experience; however, there is often no way for them to get the initial experience on which to build.

An entire curriculum built on experience

One of the most comprehensive programs developed under NIE auspices is Experience-Based Career Education (EBCE). EBCE merges academic, vocational, and general education while making use of community resources and people.

EBCE defines "career" broadly to mean "one's progress through life," not just a particular job. Because occupational choices play a powerful role in shaping our sense of identity, self-esteem, and lifestyle, comprehensive education is not separated from specific career development experiences in EBCE. While providing growth in fundamental skills—such as reading, computation, and writing—the model also stresses the "process skills" of inquiry, decisionmaking, and problem solving.

Students are encouraged to explore different jobsites to learn about different career possibilities. They find out what people actually do in their daily work and how they feel about what they do. Thus, while students are acquiring a secondary school education, they are also learning about available careers and relating maturely to adults. Learning by doing enables students to improve on academic skills by using those skills to solve real problems.

Most school districts already offer some elements of the EBCE concept—work-study, cooperative education, and similar programs. However, in addition to providing career-related learning experiences, EBCE pulls together several other innovations that are transforming American education today under various names—schools without walls, action learning, individually prescribed instruction, competency-based certification, and survival education.

THE ADMINISTRATION OF CAREER EDUCATION

Products to allow an administrator to examine career education and its implications for an educational program

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies, and university/college personnel who are responsible for planning various inservice education programs for staff.

The major topics addressed by the guides are: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

This program has been designed for use in a graduate course on a university campus or to fit an inservice program. The program's main purpose is to present to the administrator an opportunity to seriously examine career education and its implications for the educational program. It examines various administrative functions which effect the implementation of career education.

This program can involve and serve administrators at many levels of operation including department heads, building principals, curriculum directors, vocational education coordinators, and superintendents of school districts.

There are nine individual modules contained within this program:

Module I—An Orientation to Career Education
Module II—Change Strategies and Techniques
Module III—Developing Local District Career Education Philosophy
Module IV—Career Education Needs Assessment
Module V—Identification of Available Resources
Moduel VI—Components of Career Education
Module VII—Evaluating Program Components
Module VIII—Financial Program Planning
Module IX—Developing and Implementation Plan

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculum. The programs and materials can be used in both preservice and inservice activities relating to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program can be used with nonprofessionals such as parents and the community. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goal is to present to the administrator an opportunity to seriously examine career education and its implications for the educational program.

PATTERNS OF USE

The staff development materials were designed primarily to be used in group settings where the sharing of ideas and concerns can take place. However, most of the programs, all or in part, can be used on an individual basis.

The staff development materials were seen as usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

A formal evaluation is not a part of this program. Evaluation suggestions are provided, and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

RD 060 001

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond that which is normally available in school settings. No special services such as teacher training or external testing, not usually available in school systems, are needed. The staff development materials do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States who were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?

Are any of the observed changes in participant performance related to location in which the program was tested?

Are changes in participant performance related to participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with that claimed by the developers. Also, the programs generally were not biased as a result of maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on the decisions of administrators and others concerning who should be involved relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot-versions. No field test has been conducted on the existing versions.

ATTITUDES TOWARD CAREER EDUCATION

A program to foster more favorable participant attitudes toward career education

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

The purpose of this program is to foster more favorable participant attitudes toward career education. Specifically, it addresses: (1) Involving the participants in learning activities that will increase the likelihood of their continued participation in the inservice program, (2) inducing the participants to critically assess career education materials in order to integrate this information with their own areas of expertise, and (3) engaging the participants in role-playing behavior that is inconsistent with their private feelings in order to optimize an attitude change favoring career education.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

This product includes five sections:

I. Procedures manual
II. Research base and rationale
III. Teacher workshop description
IV. Supportive materials
V. Attitude assessment instrument

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) AND PURPOSE(S)

To foster more favorable participant attitudes toward career education.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services, such as teacher training or external testing not usually available by school systems, are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?
2. Are any of the observed changes in participant performance related to location in which the program was tested?
3. Are changes in participant performance related to their sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

GENERAL ORIENTATION TO CAREER EDUCATION–AN INDIVIDUAL APPROACH

An individualized approach to familiarize administrators with career education

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies, and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

Each unit contains goal statements, an introduction, performance objectives, content, study exercises and answers, and a posttest. A pretest also allows users to verify material they already know. The program is estimated to take an average of 5 to 6 hours to complete.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goals are to introduce to educators: (1) A rationale that underlies the need for career education, (2) the four major career education models currently developed by the National Institute of Education, (3) the goals and objectives of the school-based career education model, and (4) specific functions of different components within the school-based career education model.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings in which the sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally, on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services such as teacher training or external testing not usually available by school systems are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?

2. Are any of the observed changes in participant performance related to location in which the program was tested?

3. Are changes in participant performance related to their sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

THE COMMUNITY AND SCHOOL BASED CAREER EDUCATION

A planning guide for school practitioners who are responsible for involving the community in career education

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and to university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and function of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

This test presents theoretical background materials, references, planning models, and suggestions for developing programs and practices in order to secure community support and participation in school-based career education. It includes a set of five monographs which can be used with various segments of the school community.

These resource and planning guides were developed for school practitioners who are responsible for involving the community in career education. State department and teacher-training personnel will find it useful for preservice and inservice training of counselors, teachers, and educational administrators. Sections of the program, the entire text, or newly prepared materials based on the text can be used in conferences and meetings with lay public groups, parents, business and industry representatives, government agencies, minority group representatives, and professional and community organizations.

The program consists of six sections: (1) An overview of community involvement in career education, (2) a community involvement model, (3) career education—its meaning for American minorities, (4) parent involvement in school-based career education, (5) American business and school-based career education, and (6) the student and the involved community.

SUBJECT AREA(S)

Career education is the subject area.

INTENDED USERS AND BENEFICIARIES

The intended users are persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals, such as parents and the community. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goals are to secure community support and participation in school-based career education and to develop a set of five monographs which can be used with various segments of the school community.

PATTERNS OF USE

The staff development materials are designed to be complementary to the introduction of career education curriculum. The programs and materials can be used in both preservice and inservice activities relating to the content area of career education

The materials were intended primarily to be used in group settings where ideas and concerns are exchanged. Most of the programs can be used individually, all or in part.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

Formal evaluation is not a part of this program. Evaluation suggestions are given, and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond that normally available in school settings. No special services, such as teacher training or external testing not usually made available by school systems, are needed. The staff development materials in themselves do not necessitate any organizational changes although implications or suggestions resulting from involvement in these programs may require any number of changes in organizational structure or practice. The staff development materials are generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive efforts of researchers, teacher educators, teachers, and other professionals throughout the United States who were involved in various activities such as drafting, revising, editing, reviewing the program, and testing it on selected subjects.

During the field test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants: Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such confounding effects as maturation, history, and time? Are any of the observed changes in participant performance related to location where the program was tested? Are changes in participant performance related to participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did bring about changes in performance consistent with that claimed by the developers. The programs generally were not hindered by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. Further, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are suitable for general use with populations depending only on the decisions of administrators and others concerning who should be involved relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. Field tests have not been conducted on the existing versions.

DEVELOPING LOCAL CAREER INFORMATION SYSTEMS FOR MIDDLE AND SECONDARY SCHOOLS

A handbook for developers planning to implement a career information system

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

This handbook is approximately 60 pages in length, containing text, graphic illustrations, sample materials, and bibliographic information. The handbook is divided into four chapters: (1) Conceptualization of a career information system; (2) implementing the model—career information system, grades 10-12; (3) guidelines for local development of a career information system; and (4) uses of the career information system in career education.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goals are to supply local, regional, and State developers with the rationale, framework, and guidelines to develop a career information system or to develop career information materials to supplement an existing career information system.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally, on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided, and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services such as teacher training or external testing not usually available by school systems are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?

2. Are any of the observed changes in participant performance related to location in which the program was tested?

3. Are changes in participant performance related to their sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

AN ORIENTATION TO CAREER EDUCATION–GROUP APPROACH

Products to provide general career education orientation to teachers and administrators

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

The product is designed for small- or large-group instruction under the direction of university staff, State department personnel, or local district inservice coordinators. The eight modules can be used separately or in a variety of sequences to meet specific teacher or learner needs.

Module I— Why career education
Module II— Present needs for career education
Module III— Career development theory-foundations for career education
Module IV— Career education goals and planning considerations
Module V— National career education models
Module VI— Implementation strategies
Module VII— Role identification in career/education
Module VIII— Resources in career education

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goal is to provide general career education orientation to teachers, administrators, counselors, and professional level support staff in four general areas: (1) Historical content and factors that have stimulated the need for career education, (2) foundations of career education and means to operate it, (3) cooperative efforts necessary between all educational staff and community personnel, and (4) implementation strategies.

PATTERNS OF USE

The staff development materials were designed primarily to be used in group settings in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally, on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services, such as teacher training or external testing not usually available by school systems are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?

2. Are any of the observed changes in participant performance related to location in which the program was tested?

3. Are changes in participant performance related to their sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

STAFF AWARENESS: RACIAL, SOCIOECONOMIC, SEX STEREOTYPES, LIMITED CAREER POTENTIAL

Products to help teachers increase their expectations of career potentials of all students

The purpose of this program is to increase the expectations of teachers toward the career potentials of all students regardless of race, sex, ethnic background, or family socioeconomic status.

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) The need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of the career education curriculum. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The program is designed to enable teachers: (1) To gain a greater awareness of the career potential of each student irrespective of the student's race, sex, ethnic background, or socioeconomic status; (2) to develop a greater awareness of the relationship between their student-directed behaviors and their student expectations; (3) to change negative attitudes that are related to limited student expectation; and (4) to develop instructional strategies that assist students in broadening their career aspirations and expectations.

PATTERNS OF USE

The staff development materials were designed primarily to be used in group settings where sharing of ideas and concerns can take place; most of the programs can be used entirely or in part on an individual basis. The staff development materials were seen as usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

A formal evaluation is not part of this program.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations: the specification of how much time is necessary has not been determined.

IMPLEMENTATION PROCEDURES

The staff development programs and materials do not require special equipment and facilities beyond those which are normally available in school settings. No special services such as teacher training or external testing (not usually available in school systems) are needed. The staff development materials in themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. In time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were designed by means of the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such confounding effects as maturation, history, and time?

2. Are any of the observed changes in participant performance related to the location in which the program was tested?

3. Are changes in participant performance related to participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. For the most part the programs were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. The programs were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on adminstrators' or others' decisions concerning who should be involved relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

STAFF DEVELOPMENT IN CAREER EDUCATION FOR THE ELEMENTARY SCHOOL

Materials to provide general career orientation to all teachers, with special emphasis on elementary teachers

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

This program focuses on facets of career education that are important to all teachers as well as on topics believed to be of special importance to elementary teachers. The computerized version of the product is designed for individual and for small- or large-group instruction under the direction of a local staff development coordinator. The modules can be used separately or in sequence to meet specific teacher-identified needs:

Module I—Career Education on an Integrating Process
Module II—Career Development Theories
Module III—Self-Concept Development
Module IV—Child Study
Module V—Curriculum
Module VI—Community Involvement
Module VII—Career Education and Minorities

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculum. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goal of this program is to provide general career education orientation with specific discussions relevant to the elementary teacher.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided, and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. All services required are those which are usually available by school systems. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement of these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants: Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such confounding effects as maturation, history, and time? Are any of the observed changes in participant performance related to location in which the program was tested? Are changes in participant performance related to participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations, depending only on adminstrators' or others' decisions concerning who should be involved relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

STAFF DEVELOPMENT GUIDELINES FOR CAREER EDUCATION

Guides for school personnel on the role of the inservice coordinator within career education programs

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goals are to familiarize school personnel with the functions and responsibilities that could and/or should be assigned to the role of the inservice coordinator within career education programs.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings, in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally, on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services, such as teacher training or external testing not usually available by school systems are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?

2. Are any of the observed changes in participant performance related to location in which the program was tested?

3. Are changes in participant performance related to the participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. The programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

STAFF DEVELOPMENT PROGRAM FOR THE IMPLEMENTATION OF CAREER EDUCATION

Products for local school district personnel who will conduct teacher training programs in career education

The focus of these products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

The major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

This (group and self-instructional) program was developed primarily for helping local school district inservice personnel plan and conduct training programs for teachers and other instructional staff responsible for the classroom use of comprehensive career education model curriculum materials. In addition to providing content and materials for helping staff members understand and use the teacher's guides, the program also contains concepts and principles.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The major goals are to help local school district inservice personnel plan and conduct training programs for teachers and other instructional staff responsible for the classroom use of the comprehensive career education model teacher's guides.

PATTERNS OF USE

The staff development materials were designed primarily to be used in group settings in which sharing of ideas and concerns can take place. However, parts or all of most of the programs can be used on an individual basis.

The staff development materials were seen as usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided, and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

The staff development programs and materials do not require special equipment and facilities beyond those which are normally available in school settings. All services required are those which are usually available by school systems. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants: Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such confounding effects as maturation, history, and time? Are any of the observed changes in participant performance related to location in which the program was tested? Are changes in participant performance related to participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with that which the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations, depending only on administrators' or others' decisions concerning who should be involved relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

STAFF DEVELOPMENT PROGRAM FOR PROMOTING EFFECTIVE USE OF COMMUNITY RESOURCES IN CAREER EDUCATION

Guides for school staff members to help generate extensive use of community resources in career education

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education, (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

The purpose of this program is to help school staff members make more effective and more extensive use of community resources in career education. The materials are designed for large- or small-group instruction. Program materials include: (1) Community resource and career education—provides a rationale for community resource use in career education based on two attitudinal surveys; (2) needs assessment (group and individual)—a procedure that can be used to determine current staff attitudes, usage of resources, and training interests; (3) workshop plan—includes a suggested instructional plan for orienting staff to the use of community resources; and (4) appendixes—include information on the role of the community resource coordinator and the development of a community resource directory.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

To help school staff members make more effective and more extensive use of community resources in career education.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings, in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally, on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services, such as teacher training or external testing not usually available by school systems are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such compounding effects as maturation, history, and time?
2. Are any of the observed changes in participant performance related to location in which the program was tested?
3. Are changes in participant performance related to the participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

A TRAINING PROGRAM FOR THE IN-SERVICE COORDINATOR IN CAREER EDUCATION

Training products to familiarize school personnel with functions of the inservice coordinator in career education programs

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education, (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

The intended audience includes local district personnel as well as teacher educators who are both interested and responsible for the selection of and training of personnel for the coordination of inservice activities.

SUBJECT AREA(S)

The staff development materials are designed to be complementary to the introduction of career education curriculums. The programs and materials can be used in both preservice and inservice activities related to the content area of career education.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators, and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program could be used with nonprofessionals such as parents and community persons. This program is not designed for student use

GOAL(S) OR PURPOSE(S)

The major goals are to assist persons responsible for career education programs in planning and implementing an inservice education program for all staff.

PATTERNS OF USE

The staff development materials are designed primarily to be used in group settings, in which sharing of ideas and concerns can take place. However, most of the programs can be used either partially or totally, on an individual basis.

The staff development materials are usable in inservice or preservice courses or workshops.

ASSESSMENT PROVISIONS

No formal evaluation is a part of this program. Evaluation suggestions are provided and it is assumed that the learner and/or coordinator will use the suggestions as they see fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond those normally available in school settings. No special services, such as teacher training or external testing not usually available by school systems are needed. The staff development materials themselves do not necessitate any organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are seen as generally self-installable and self-contained. Over time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed through the extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States. These individuals were involved in various activities such as drafting, revising, editing, reviewing, and testing the program with a set of appropriate individuals.

During the field-test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

1. Does the program induce the kinds of changes in performance claimed by its developers, changes over and

above those attributable to such compounding effects as maturation, history, and time?

2. Are any of the observed changes in participant performance related to location in which the program was tested?

3. Are changes in participant performance related to the participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with those the developers claimed. Also, the programs generally were not biased by such effects as maturation, history, location, and time, thus making the programs transportable to other settings. In addition the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on administrators' or others' decisions concerning who should be involved, relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

TEACHER AIDES IN CAREER EDUCATION

Guides to create awareness of potential contribution of community helpers to career education programs

The focus of products is on suggested goals, strategies, and resources for planning the administration and implementation of career education. The guides should be especially useful to local and State education agencies, and university/college personnel who are responsible for planning various inservice education programs for staff.

Major topics addressed by the guides include: (1) Need for staff development in career education; (2) role and functions of the inservice coordinator; (3) planning, organizing, and conducting staff development programs; (4) suggested inservice programs for specific groups; (5) evaluating the staff development effort; and (6) sources of inservice education assistance.

This instructional program is designed to create aide, teacher, and administrator awareness of the potential contribution of community helpers to the implementation of career education. The program is organized into four modules covering the role of the aide in career education, role-identification and team-building skills, communication skills, and instructional activities relevant to career education. Separate programs have been established for instructional aides, teachers, and administrators. The aides are exposed to all four modules, while the teachers receive three and the administrators two.

SUBJECT AREA(S)

Staff development materials are designed to be complementary to the introduction of career education curriculum. which can be used in both preservice and inservice activities relating to career education encompass the subject area.

INTENDED USERS AND BENEFICIARIES

This program is designed to be used by persons who are involved with the preservice and inservice levels of education for teachers, administrators and other professional or paraprofessional staff. With knowledgeable and careful adaptation, the program can be used with nonprofessionals such as parents and the community. This program is not designed for student use.

GOAL(S) OR PURPOSE(S)

The purpose of the guide is to create aide, teacher, and administrator awareness of the potential contribution of community helpers to the implementation of career education.

PATTERNS OF USE

The staff development materials were designed primarily to be used in group settings where the sharing of ideas and concerns can take place although most of the programs can be used in whole, in part, or independently.

The staff development materials were deemed usable in inservice or preservice courses or in workshops.

ASSESSMENT PROVISIONS

Formal evaluation is not a part of this program. Evaluation suggestions are given, and it is assumed that the learner and/or coordinator will use the suggestions as seen fit.

TIME REQUIREMENTS

No specific time requirements are mandated by the staff development programs in general. The programs are designed to be adaptable to a variety of individual or group situations. Thus, the specification of how much time is necessary is negotiable.

IMPLEMENTATION PROCEDURES

There are no foreseen implementation procedures beyond the common range of expectations. The staff development programs and materials do not require special equipment and facilities beyond that normally available in school settings. No special services such as teacher training or external testing, not usually made available by school systems, are needed. The staff development materials per se do not necessitate organizational changes. Implications or suggestions resulting from the involvement in these programs may, however, require any number of changes in organizational structure or practice. The staff development materials are regarded generally as self-installable and self-contained. In time, some of the material may become outdated.

ASSURANCES AND CLAIMS

The staff development materials were developed as a result of extensive involvement of researchers, teacher educators, teachers, and other professionals throughout the United States who were engaged in various activities such as drafting, revising, editing, reviewing, and testing the program with selected subjects.

During the field test phase of the staff development programs, questions such as the following were addressed concerning the direct impact or effect the program had on participants:

Does the program induce the kinds of changes in performance claimed by its developers, changes over and above those attributable to such confounding effects as maturation, history, and time?

Are any of the observed changes in participant performance related to location where the program was tested?

Are changes in participant performance related to participant's sex, years of teaching experience, degree of prior exposure to a formalized career education effort, and/or degree of prior exposure to the content area being discussed in the program?

Reports of the field test of each of these programs are available from the developers. In general, the programs did result in changes in performance consistent with that claimed by the developers. Also, the programs generally were not biased as a result of such effects as maturation, history, location, and time thus making the programs transportable to other settings. In addition, the programs generally were not biased by participant factors such as sex, years of teaching experience, or degree of prior exposure to career education. Therefore, the staff development programs are of general use with populations depending only on decisions of administrators or others concerning who should be involved relative to their role responsibilities.

The existing staff development programs are revised versions based on suggestions from the field test and review of the pilot versions. No field test has been conducted on the existing versions.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 060 014

MANAGEMENT INFORMATION SYSTEM FOR VOCATIONAL EDUCATION (MISVE)

A system for managers to increase accountability through the improved utilization of information

The Management Information System for Vocational Education (MISVE) is being designed for managers concerned with better planning and accountability through the improved utilization of information. The design of this system was prompted by the recognition that while many vocational education agencies in recent years have allocated substantial resources to the task of upgrading their existing management information systems so that appropriate data will be available to support administrative decisionmaking and reporting, these efforts usually have failed to produce exemplary systems. This is because there continues to be a lack of consensus about what constitutes a helpful, usable, and practical data base which supports management's information requirements and because Management Information System (MIS) administrators have often been unable to take advantage of the latest in computer software technology and are thus hindered in producing data for management when, and in the form, it is needed. MISVE is designed to deal with both of these problems.

MISVE uses a data base management file organization concept and data base structuring to provide users with the widest flexibility in determining the size and complexity of their data bases. MISVE is also designed to deal effectively with pervasive problems of most information system administrators who must have options open to them for acquiring and maintaining computer software on computer hardware which is available to them, and who must periodically redefine information needs, update existing data bases, and access data in a form and at a time when it is needed.

An information subsystem is made available which includes data collection instruments and procedures which can be adapted to meet unique user requirements. These instruments collect data at the secondary, postsecondary, and adult levels.

Although MISVE provides users with data collection instruments, this information system does not require the use of a fixed set of prior-agreed-to data elements. The MISVE software structure permits small or large data bases with modifications being made at the user's option.

System 2000, a commercially available Data Base Management System (DBMS), has been selected for use in the development of MISVE. Computer programs are made available which are required for using System 2000 in conjunction with the MISVE information subsystem. These computer programs (load, update, and edit) will be available as part of the documentation supplied to MISVE users.

A product package composed of a number of nontechnically oriented documents will be available to potential users to guide them in assessing the value of MISVE for their needs. In addition, a number of technical manuals will be available for MIS administrators that will provide information needed by them to adapt, install, operate, and maintain MISVE with a minimum of external assistance.

SUBJECT AREA(S)

The subject area is an information subsystem which includes data collection instruments and procedures that can be adapted to meet unique user requirements. These instruments collect data at the secondary, postsecondary, and adult levels about student characteristics; followup of former students; educational outcomes; vocational programs and services; instructional facilities; instructional costs; equipment and materials; State and local staffing and assignments; local plans for vocational education; and manpower requirements.

The system provides for input of manpower data collected through a variety of approaches such as occupational employment surveys of the U.S. Department of Labor, which are locally generated manpower surveys and inputted into MISVE via coding crosswalks. Most MISVE data are collected at the local school district level and these data can then be aggregated to produce regional and State totals.

INTENDED USERS AND BENEFICIARIES

MISVE is designed to be used in operational environments by vocational education management and supervisory personnel at State and local levels. Other system users might include advisory and regulatory bodies who require information outputs to assess and monitor educational system activities and outcomes.

GOAL(S) OR PURPOSE(S)

MISVE's goals are to provide vocational education agencies with an examplary management information system that employs the latest concepts in information system retrieval and processing technology, and to address itself directly to the national concern for better planning and accountability through improved utilization of information.

PATTERNS OF USE

MISVE is provided to users as a complete information system. Users can modify all system components to meet unique user needs. Guidelines and directions for modification are contained in the system documentation.

A computer software subsystem is provided which operates in online and batch-processing modes and uses an English-like natural language to access and update data bases via computer terminals. A report generator feature is available for producing "one-time" and standard reports. COBOL and FORTRAN interface programs permit MISVE users to continue to use their existing computer programs written in these computer languages.

The DBMS software package can be acquired from the vendor under a variety of arrangements. MISVE users can also purchase time from computer time-sharing services which offer System 2000 to their subscribers. Computer software maintenance is obtainable directly from the software vendor or time-sharing service.

ASSESSMENT PROVISIONS

Potential users must assess for themselves MISVE's value to them. Assessment of the validity of source data will be the responsibility of the data gathering agency, although a computer edit program is made available to assess the validity of field and range values and to provide error messages.

TIME REQUIREMENTS

This product is not timebound but is intended for continuous use.

IMPLEMENTATION PROCEDURES

System 2000 operates on IBM, UNIVAC, and CDC computer hardware currently available to most State-level education agencies. Smaller educational organizations can make use of the needed computer hardware through universities, other government agencies, or commercial time-sharing services providing System 2000 to their subscribers. The use of other DBMS software with MISVE is possible. In that event, MISVE's computer hardware requirements might be different.

MATERIALS AND EQUIPMENT

MISVE is in the field trial stage of development; at this time, however, it appears that MISVE will require no additional personnel beyond that currently employed by States to collect and process MIS data. Data collection instrument masters will be available from the center. Computer terminals can be acquired from a number of commercial vendors.

ASSURANCES AND CLAIMS

The MISVE product does not, by itself, pose a physical, psychological, sociological, or other harmful condition to those involved in its use. However, the user is ultimately responsible for the operation of MISVE, the protection of individual privacy, security of information, and other matters which fall under the purview of protection of human subjects. There is no evidence to assume that the product perpetuates sexism, racism, or other biases related to religion, age, or socio-economic stereotypes.

No assurances of replicability or transportability can be made at this time because MISVE is undergoing field trial in only one State. The assurance of replicability or transportability will require a further field test and validation of the system in several locations. This assurance can be verified by late 1976, but only if additional funds are obtained for this purpose.

DEVELOPER/AUTHOR:

Center for Vocational Education
Ohio State University
1960 Kenny Rd.
Columbus, Ohio 43210

Harold Starr, Program Director

AVAILABILITY

MISVE documentation will be delivered to the National Institute of Education by October 31, 1975. No funds have been provided for product dissemination.

INFORMATION CURRENT AS OF MARCH 1975 ■

RD 060 015

MODULE DEVELOPMENT HANDBOOK (A PRODUCT OF THE PERFORMANCE-BASED PROFESSIONAL EDUCATION CURRICULA PROGRAM)

A handbook to assist teacher educators and administrators in the development of performance-based instructional modules

The *Handbook for the Development of Professional Vocational Teacher Education Modules* is designed to assist teacher educators and administrators in the development of performance-based instructional modules. It describes the tested structure and specifications for developing performance-based modules utilized in development of the modules in the performance-based professional education curriculums program.

The handbook contains a description of the performance-based vocational teacher education system; an explanation, with examples, of the module format; and an illustrated module. While the handbook is designed primarily as a "stand-alone" product, it may be used to enhance modularized instructional programs.

SUBJECT AREA(S)

Development of professional vocational teacher education modules.

This handbook is approximately 100 pages in length and builds on the module structure developed in the performance-based professional education curriculums program.

INTENDED USERS AND BENEFICIARIES

The primary users of this product will be teacher educators involved in the development of curricular materials for the preparation of preservice and inservice vocational teachers, and local and State education agency personnel engaged in the development of curricular materials for the preparation and/or upgrading of preservice and inservice teachers.

GOAL(S) OR PURPOSE(S)

The purpose of the handbook is to provide teacher educators, administrators, and local and State education agency personnel concerned with curriculum development with a detailed guide for developing performance-based instructional modules.

PATTERNS OF USE

The handbook is a self-contained guide. It may be used in teacher education institutions and local and State education agencies to aid in the development of instructional modules covering professional and technical competencies needed in specific educational settings, but not included in existing performance-based modules. The handbook may also be used as a supplementary aid in implementing modularized instruction programs.

ASSESSMENT PROVISIONS

As a guide to be used in developing instructional modules, the handbook contains no provisions for evaluation of the user.

TIME REQUIREMENTS

The time spent in using the handbook will vary, depending on the needs and background of the particular institutions and individuals using it, and the scope and nature of the materials being developed.

IMPLEMENTATION PROCEDURES

The handbook, as a self-contained guide, does not require any special equipment, services, or procedures for implementation.

ASSURANCES AND CLAIMS

A prototype of the handbook was used by 20 graduate students and their instructors at Ohio State University. As part of their seminar, each student was asked to produce an instructional module using the handbook. Before the course was completed, each student critiqued the handbook and returned it to the instructor. Although product effectiveness was the major thrust of these critiques, students were encouraged to respond in terms of any negative attributes of the handbook. No problems of social bias were reported.

A revised edition of the handbook is currently being used by the six center staff members who are preparing modules for advanced field testing.

Each consultant hired to revise modules for advanced testing is first given a copy of the handbook to read to gain an orientation to what the revision task is and to guide revision efforts. It is estimated that approximately 15 consultants will have used the handbook before all of the modules are prepared for advanced field testing.

Although transportability will not be addressed directly, the fact that 15 consultants from a wide range of institutions will have used the handbook should provide some assurance that it is transportable.

ORIENTATION TO MODULARIZED INSTRUCTION BOOKLET (A PRODUCT OF THE PERFORMANCE-BASED PROFESSIONAL EDUCATION CURRICULA PROGRAM)

A booklet to assist teacher education faculties develop necessary concepts regarding performance-based instruction

The *Orientation to Modularized Instruction Booklet* is designed to aid in the installation and use of performance-based teacher education modules. This 50-page booklet will assist teacher education faculties and students (teachers-in-training) in the development of necessary concepts regarding performance-based instruction, and will aid each in identifying and assuming their respective roles in implementing modularized, performance-based instruction.

The booklet contains (1) an explanation of the need for systematic research-based teacher education, (2) a discussion of the essential and desirable characteristics of performance-based teacher education (PBTE) programs, (3) a description of modules and their function, (4) a description of the research and development of the performance-based vocational teacher education modules, (5) an explanation of the respective roles of teacher educators and students in PBTE programs, and (6) a listing of professional vocational teacher education modules available.

SUBJECT AREA(S)

Preservice and inservice teacher education, and vocational education.

INTENDED USERS AND BENEFICIARIES

Primary target audiences for the *Orientation to Modularized Instruction Booklet* are: (1) Teacher educators engaged in preservice and inservice education of vocational teachers, (2) State department of education and local education agencies involved in inservice training and/or improvement of vocational teachers, and (3) preservice and inservice vocational teachers-in-training.

The ultimate intended beneficiaries of the product are the vocational students who will benefit through improved instruction.

GOAL(S) [illegible](S)

The purp[illegible]e *Orientation to Modularized Instructi*[illegible]e: (1) To increase the acceptance by teacher edu[illegible] State Department of education personnel, and tea[illegible]ing of essential concepts related to pe[illegible]odularized instruction; (2) to improve [illegible]nd acceptance by teacher educators, St[illegible] education personnel, and teachers-in-training o[illegible]pective roles in implementing and conduc[illegible]ance-based modularized instruction; and (3) to orient [illegible]ance-based professional vocational teacher [illegible]ation modules to module format, to the intended [illegible]e use, and to the total listing of modules available for use.

PATTERNS OF USE

The *Orientation to Modularized Instruction Booklet* is a self-contained booklet containing several sections which can be used in their entirety as organized, or one or more sections may be selected depending on the needs and background of the user. The orientation booklet is designed to assist in implementation of the performance-based professional vocational teacher education modules. Teacher educators and others implementing the curriculum may very well use the entire booklet, while teachers-in-training may use only the section dealing specifically with the role of the student in modularized instruction.

ASSESSMENT PROVISIONS

The booklet is designed for use in implementing performance-based professional vocational teacher education curriculums and contains no provisions for evaluation of the user.

TIME REQUIREMENTS

The time spent using the booklet will vary depending on the purposes, needs, and backgrounds of the individual users. It is anticipated that the booklet will be used as a reference several times during implementation of the curriculums.

IMPLEMENTATION PROCEDURES

The *Orientation to Modularized Instruction Booklet* is a self-contained resource for users of performance-based teacher education modules. As such, it does not require special equipment, facilities, services, or procedures in its implementation.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Orientation to Modularized Instruction Booklet	1	6.50 (estimated)	Reusable	

DEVELOPER/AUTHOR:

Center for Vocational Education
Ohio State University
1960 Kenny Rd.
Columbus, Ohio 43210

James B. Hamilton, Director
Performance-Based Professional Curriculums Program

AVAILABILITY

The booklet is under development at this time. A preliminary revision of the booklet will be used in conjunction with advanced testing of the performance-based vocational teacher education modules. It is then to be refined and available for publication July 1976.

INFORMATION CURRENT AS OF APRIL 1975 ■

PROFESSIONAL VOCATIONAL TEACHER EDUCATION MODULES (118) (PRODUCTS OF THE PERFORMANCE-BASED PROFESSIONAL EDUCATION CURRICULA PROGRAM)

Vocational teacher curricular materials for vocational education training

The performance-based *Professional Vocational Teacher Education Modules* constitute vocational teacher curricular materials organized in stand-alone unit form for preservice and/or inservice use in all vocational education service areas. The modules are based on studies of professional performance requirements needed for vocational teaching which resulted in verification of 384 performance elements. These elements were grouped into 10 categories and provided the professional performance base for module development. One hundred and eighteen modules of approximately 50 pages each have been developed and are grouped as follows:

A—Program planning, development, and evaluation (15 modules)
B—Instructional planning (6 modules)
C—Instructional execution (29 modules)
D—Instructional evaluation (6 modules)
E—Instructional management (9 modules)
F—Guidance (6 modules)
G—School-Community relations (10 modules)
H—Student vocational organizations (15 modules)
I—Professional role and development (8 modules)
J—Coordination (14 modules)

The module format is standardized into four major components: Title page, introduction, module structure and use, and learning experiences. The modules are designed for use in both preservice and inservice vocational teacher education programs in the various vocational service areas. The individualized instructional mode of the module learning experiences allows either individual or group instruction to be used. The research base for the modules provides objectives which focus on competencies verified as important and indicates that the competencies have been achieved.

Organization into modular units offers flexible use of one or more modules appropriate to local needs. Specific competencies can be developed by selecting the module or modules containing learning experiences assigned to fulfill these needs. Through selection of appropriate modules, programs can be tailored to meet the needs of individual teachers.

SUBJECT AREA(S)

The modules cover professional performance requirements needed for vocational teaching.

INTENDED USERS AND BENEFICIARIES

Primary users of the performance-based vocational teacher education modules will be: (1) Teacher educators engaged in preservice and inservice education of vocational teachers, (2) State departments of education and local education agency personnel involved in inservice training and/or improvement of vocational teachers, and (3) preservice and inservice vocational teachers in training. A large number of the modules may also be used in the preparation of other career education teachers, although they have not been field tested for this purpose.

There are about 3,500 vocational teacher educators in 363 institutions of higher education. If each of these institutions serves a minimum of 75 (preservice and/or inservice) vocational teachers annually, the target population would be approximately 27,000 per year. This is in addition to the 3,500 teacher educators and an undetermined number of State department and local education agency personnel with inservice teacher training responsibilities. The ultimate target population, of course, comprises the hundreds of thousands of vocational students who will benefit through improved instruction.

GOAL(S) OR PURPOSE(S)

Students completing the modules will possess the knowledge, attitudes, and skills necessary to discharge the duties of a vocational teacher. Such teacher competencies include: (1) To plan for, develop, and evaluate vocational programs; (2) to plan for, carry out, and evaluate instruction; (3) to manage the instructional environment; (4) to guide students in their decisionmaking; (5) to foster school-community relations; (6) to advise and direct the student vocational organization; (7) to carry out responsibilities of their professional role and develop their teaching expertise; and (8) to coordinate the cooperative educational program.

PATTERNS OF USE

The performance-based vocational teacher education modules are designed for use in both preservice and inservice educational programs. The individualized instructional mode of the module learning experiences allows either single or group instruction to be used. Patterns of use include: (1) Implementation of entire programs of preservice and inservice competency-based professional teacher preparation, (2) structuring of courses consisting entirely of individualized competency-based professional teacher preparation, (3) substitution of modules for portions of or all of existing courses, (4) selection of modules to meet specific instructional needs on an individual basis, and (5) integrating professional preparation beginning with the first year of undergraduate teacher preparation.

ASSESSMENT PROVISIONS

Through information provided in the front section of each instructional package (module), students can, using self-diagnosis, determine how much of the module (for example, the entire module, selected learning experiences, and/or final learning experience) they need to complete in order to achieve competency. As the students complete each learning experience, immediate feedback is provided through self-checks, model answers, performance checklists, and final assessment by an experienced teacher educator using a teacher performance assessment form.

TIME REQUIREMENTS

Two factors affect the time required to complete each module: (1) Because modules are performance-based, not time-based, and because student progress through the module is self-paced, individual students will require varying amounts of time to complete a module; and (2) because the competencies to be attained in the different modules vary in scope, the time required to complete a given module will also vary; for example, the time required to become skilled in introducing a lesson and to present a lesson introduction in an actual school situation varies drastically from the time required to become skilled in conducting a student followup study and to conduct a student followup study in an actual school situation.

IMPLEMENTATION PROCEDURES

Although modules are designed to allow students to complete most of the learning activities independently, this form of individualized instruction depends on adequate resources and resource persons being available to the students. It is necessary to have learning laboratories and/or resource centers where the publications and standard audiovisual equipment required for the completion of modules are assembled for student use. Such laboratories or centers also need to include supplementary or enrichment types of texts and materials.

Arrangements need to be made with local schools offering vocational programs so that students are assured of having real school settings in which to demonstrate final competency. Teacher educators who will serve as resource persons need to be oriented to the concepts and procedures underlying performance-based teacher education programs. Resource persons need to have expertise in the competencies covered by the modules. Since one of the major functions of the resource person is to help students map out their teacher education programs, resource persons must be skilled in identifying student needs and in matching those needs to module selection.

If a totally performance-based teacher education program which meets all essential characteristics of such programs is to be established, more extensive reorganization of the existing teacher education program may be necessary. Such reorganization may include: (1) Changes in courses and course requirements; (2) provision for field-centered instruction such as learning to teach while in an actual school situations; (3) changes in staffing pattern; for example, differentiated staffing; (4) arrangements for additional financial support necessary to compensate for the increased time needed for teacher educators to individualize their instruction; and (5) provisions for certification on the basis of demonstration of specified teacher competencies rather than on the basis of credit hour accumulation.

ASSURANCES AND CLAIMS

The modules will not adversely affect users. An early prototype of each of the modules was used by a minimum of 10 teacher trainees and 1 teacher educator. Both the teacher trainees and teacher educator completed questionnaires that were designed to collect adverse user effects. No adverse effects were reported by either group on any of the modules. Revised editions of the modules are currently undergoing advanced field testing with a minimum of 20 teacher trainees and 1 teacher educator. During advanced testing, each teacher trainee and teacher educator will be asked to complete several items designed to identify the negative attributes, if any, contained within each of the modules.

These modules will not perpetuate social biases. A detailed set of procedures was used in developing each module. These procedures included several reviews and critiques of materials by teams of people with wide social representation. The rewriting and editorial teams have included members of two racial minorities and three women who are sensitive to sexual biases and role stereotyping. During advanced testing, each student will be asked to identify any social biases that might be contained in the modules. The teacher educators will also be asked to report any social biases they have found. Therefore, given the editorial staff, plus the responses of students and teacher educators, it seems unlikely that the modules will contain any social biases.

From a conceptual standpoint, the modules should be highly transportable. Through a well-organized process, vocational teachers and teacher educators from all service areas and several institutions contributed to the development of each of the modules. As a result, these modules should be highly transportable across vocational service areas and institutional settings. They should be useful regardless of the amount of teaching experience or the highest level of formal education obtained. Data are being collected on each of these modules during advanced testing. However, because of limited sampling and sample sizes, the question of product transportability will not be empirically addressed.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Individualized instruction performance-based modules	Varies with experience and ability of student (5-10 modules per quarter of instructional time)	Estimated at $2.25 each	Consumable (must be replaced after use)

James B. Hamilton, Director
Performance-Based Professional Education Curriculums Program

AVAILABILITY

The projected publication date for the performance-based *Professional Vocational Teacher Education Modules* is July 1976. All modules have undergone preliminary field testing. Module revision and advanced field testing are in process on an incremental basis. Modules will be refined following advanced testing and prior to publication. The modules were copyrighted in 1974, and copyright is claimed only during the period of development, test, and evaluation unless authorization is granted by the National Institute of Education to claim copyright on the final materials. CAREER EDUCATION IN THE ELEMENTARY SYSTEM

A training course in career education in elementary schools consisting of video taped instructional units

This is a series of 12 half-hour color video taped instructional units with accompanying ancillary and testing materials, designed as inservice training in career education for teachers, guidance personnel, and administrators in grades K-6. Educational personnel are provided with information to acquaint them with the concepts and philosophy of career education and with the major principles and practices of career education in an elementary school setting. Video tapes feature classroom teachers, students, guidance personnel, administrative personnel, community members, parents, and context authorities discussing and illustrating career education principles, practices, and techniques in the elementary school environment. Content and concept procedures presented in the instructional units emphasize the infusion of career education into the total school curriculum.

Combined with the video tapes is a packet of ancillary/laboratory materials, including both group and individual activities for participant completion. Also included are materials for testing participant progress in content areas covered in the video tapes and ancillary materials; tests include a pretest, unit tests (one for each video tape), and posttest. Materials are designed to be used in conjunction with video taped instructional units. They can adapted for use in either group or individual situations.

SUBJECT AREA(S)

Twelve 1/2-hour color video taped instructional units comprise a comprehensive training course in career education in the elementary school. Titles of all video tapes in the series are as follows:

1. The Concept of Career Education
2. A Complete Career Education Program
3. Job Clustering
4. Integrating Career Education into the Curriculum
5. Total Curriculum Integration
6. Collection and Utilization of Instructional Materials
7. Community Resources
8. Implementation Strategy for the School System
9. Attitudes About Change
10. Dealing with Educational Change
11. Special Interests and Career Education
12. Rewards of a Comprehensive Career Education Program

INTENDED USERS AND BENEFICIARIES

The program is designed specifically for educational personnel in grades K-6. These personnel may include classroom teachers, guidance/counseling personnel, and administrative personnel. Selected tapes might well be used to introduce the concept of career education to parents, business leaders, and other community members. The ultimate beneficiaries are those students who will be better prepared to enter and advance in the world of work as a result of increased teacher competencies in the area of career education.

GOAL(S) OR PURPOSE(S)

The educator who successfully completes the elementary career education training program will be able: (1) To comprehend the major principles and practices of career education in an elementary school setting, (2) to recognize the need for career education in an elementary school setting, (3) to recognize the formative nature of the career education concept, (4) to be aware of possible areas of conflict among educators regarding the concept of career education, and (5) to introduce career education to an elementary school staff.

PATTERNS OF USE

The *Elementary Career Education Program* was designed as a comprehensive sequential series comprising a course in the implementation and infusion of career education. However, as a training program, materials can be used either independently or together as a preservice program, an inservice program, or part of an inservice program, or as a complete course.

ASSESSMENT PROVISIONS

Participants in the career education program are given a pretest to measure entry-level knowledges and skills; this test can also serve as a posttest. Also provided are unit tests (one for each video tape in the series).

TIME REQUIREMENTS

Each video tape in the series is 30 minutes in length. Ancillary/laboratory materials accompanying each video tape will require an average of 2 hours for completion.

IMPLEMENTATION PROCEDURES

A video cassette player is necessary in order to show video tapes. Standard format of tapes is 3/4 inch video cassette.

The career education program is designed to be primarily self-instructional. The program does not require a specialist teacher. Instructional units may be presented in a small-group or individual situation. No organizational changes would be necessitated in existing school structures for effective use of this product.

Video cassettes are reusable over a long period of time. The only consumables are the packet of ancillary materials, textual items (minimal), and written tests for each participant.

ASSURANCES AND CLAIMS

This product has been used with approximately 300 educators throughout 8 States. The product is transportable. Materials can be used effectively without the presence of a specialist teacher without detracting from the quality of instruction presented.

Materials do not appear to display any form of social bias, including ethnic or sexual stereotyping.

The developers have not received any reports of harm associated with the use of this product.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor

CURRICULUM CONTENT DERIVATION SYSTEM: A USERS' MANUAL OF PROCEDURES AND GUIDELINES

A system offering curriculum developers a data-based approach to deriving program content of occupational preparation

For curriculum developers, the *Curriculum Content Derivation System* offers a systematized and data-based approach to the problem of deriving content for programs of occupational preparation. It is responsive to recent findings which maintain that the content and emphasis of curriculums are far more likely to influence learning achievement than are the media, methods, or strategies for teaching the content. For occupational preparation and job training programs, the usefulness of curriculums depends on their reflecting the performance requirements of the occupations being studied.

This systematized approach to the gathering and use of field information is designed to assist developers of occupational training programs to provide more effective answers to such questions as: (1) How can the content of an existing program be justified? (2) How can it be made certain that graduates are effectively prepared for their occupation if they should move outside this community? (3) If a good program exists elsewhere, how can it be compared with the local program to determine points of content similarity? (4) How can it be routinely determined that the content of a program is up to date? (5) How can the curriculum developer be certain that a program's content is not wasteful of student time and of learning resources? (6) How can employers be assured of what particular skills and knowledge are acquired by training graduates?

These questions deal with issues of the job relevance of training content: Criticalness, comprehensiveness, and timeliness. Such issues are the focus of the procedures being developed. Concurrently, the procedures serve to economize on efforts at content derivation, by systematically narrowing the focus as greater attention to content detail is warranted in the curriculum development process.

The full system will be reported to user personnel in a manual of sequenced procedures and guidelines to aid developers of occupational curriculums in education, business, industry, and government to determine the task and conceptual content of jobs for which students are being prepared, and to select from a large body of verified content that which is most critical for training consideration. The system largely depends upon data obtained from comprehensive and representative surveys of persons closest to, and most knowledgeable about, job performance and its requirements. It will be most cost effective in repeated use for situations where an instructional program is being developed or verified for a number of institutions or settings (such as is done by state and regional curriculum laboratories) or by industrial training departments that service multiple subsidiary firms. The procedures will be of special benefit where there is uncertainty with regard either to relevant performance or appropriate curriculum content, as in new and emerging occupations as they evolve.

In addition to their use for curriculum development, the derivation procedures under development offer the possibility of new approaches to the problems of the effective tracking, assessment, and reporting of learning achievement. The adoption and use of selected procedures potentially could facilitate open-entrance/open-exit instructional programing and could provide learners, potential employers, and instructional personnel with more useful information in the form of performance credentials, for training, placement, and career progression.

SUBJECT AREA(S)

Careers and curriculum development.

Several functional units of procedures and guidelines comprise the User's Manual. The units for identifying relevant job content are: (1) Guidelines for defining occupational scope of interest for curriculum purposes and (2) procedures for identifying and validating comprehensive lists of job performance requirements, expressed as tasks performed, and for supporting technical knowledge required. The units for selecting job content for which training is critical are: (1) Procedures for selecting job tasks and relevant technical concepts and (2) suggestions for identifying particular aspects of each task that warrant emphasis in training.

INTENDED USERS AND BENEFICIARIES

Potential users are developers of occupational curriculums for secondary and postsecondary education (public or private) or for similar training in business, industry, and government. Preferably, users should be at a level which offers high potential impact or broad use of curriculums developed. Ultimate beneficiaries, of course, are the students who will receive instruction and occupational preparation based upon more relevant, important, and timely curriculums for job training or retraining purposes.

GOAL(S) OR PURPOSE(S)

The major goals are: (1) To improve the quality of educational programs for occupational preparation by systematic derivation and selection of what is taught, (2) to enable a closer linkage between occupational education and actual work requirements, and (3) to promote the capability of communicating the job-relevant content of training programs so that others may share, programs may be compared, and employers and graduates may know the learning intended.

PATTERNS OF USE

The full system is a sequential one that proceeds from a policy decision to prepare a curriculum and to state the terminal learning objectives. Some of the system components are optional, for use only when more than one job is part of the scope of interest. Some components also offer procedural variations. In addition, all of the components have some stand-alone value, capable of being applied in modular units depending on previous information available or upon differing needs and uses for the information.

The full sequence established for the system is: (1) Determining the occupational scope of interest, (2) constructing and using comprehensive lists of job tasks and supporting technical concepts to obtain performance requirement data, (3) determining the existence of job types within the occupational area of interest, (4) evaluating the relative significance of these jobs for formal instruction, (5) estimating changes in task characteristics and requirements for the near future, (6) selecting tasks and concepts for instructional consideration based upon field data, (7) determining the training emphasis categories appropriate for each selected task, and (8) formulating comprehensive statements of terminal performance objectives for the purpose of communicating the intent of the learning program.

TIME REQUIREMENTS

Time required to use the system for deriving curriculum content is expected to vary greatly from application to application. It will depend, for example, on the degree of uncertainty with regard to the occupation, the prior availability of specific information such as task listings, the complexity of the occupational field being investigated, and the use of various procedural options. However, the time and expense required for repeated use of the full set of procedures should not be nearly so great as for comparable efforts by more conventional and less empirical methods, such as those employing literature searches, interviews with workers, expert advisory committees, or critical incident records. Generally, however, the first-time application to an occupational area does involve a significant initial outlay. Cost-effectiveness value emerges with periodic reapplication and with sharing of information and results with other curriculum developers to which the process is uniquely suited.

IMPLEMENTATION PROCEDURES

Special equipment, facilities, services, and organization are not considered to be the factors of prime importance for the implementation and continued use of the product. What is more essential is a recognition that, when uncertainty exists, time and effort must be allowed for systematically reducing the uncertainty, using data-based methods. Use of the system procedures does, however, involve certain assumptions regarding the availability of curriculum development and data-handling capability, as is normally found in State education agencies, State universities, and among major industrial training departments. Computer programs to accomplish the necessary data processing are part of the total program developed for the system.

Summary Cost Information

It seems reasonable to assume that, with the exception of the manual, the other printed resources will be available to most users. This assumption applies to personnel requirements and services as well. Thus, the specific computer software is the only special requirement of any importance for initial installation, though many user agencies could readily generate the necessary software from the descriptions in the manual. With regard to continuation, the long-term cost of periodically deriving curriculum content is expected to be far less than more conventional methods.

Personnel Required for Product Adoption and Implementation

A person having qualifications in occupational curriculum development, who also has access to persons with capabilities in job description, design of surveys, and data processing is needed.

ASSURANCES AND CLAIMS

There is no evidence to suggest that these procedures could in any way be harmful to the intended users. These users will, however, need to collect data from populations consisting of workers and supervisors. During product development, data collection instruments were subjected to careful scrutiny, including clearance by an approved committee for the protection of human subjects. The content of the questionnaires is focused on job requirements, unrelated to social issues and biases such as racism and sexism. The process, however, could be helpful in establishing equal opportunity requirements for employment tests, with the addition of appropriate respondent background information and data comparisons.

Final assurances of replicability and transportability cannot be offered for the product as a whole prior to product completion, scheduled for January 1976. Strong interim assurances are appropriate, however, based upon design intentions and upon evidence obtained through replicated tryouts of major product components. As part of the design, the product development plan calls for the involvement of potential users in the development and tryout of product components. Those involved have represented several sections of the country and a variety of State vocational agencies and work settings. Task inventory surveys were administered to more than 200 employees in each of 3 rather dissimilar occupations (general secretaries, business-data programers, and auto mechanics) in eight States. Similar tryout of surveys on technical concepts were also conducted. Occupational data from such tryouts will be published with technical reports on the analyses of data-processing portions of the procedures.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
User's manual	1	50.00 (estimated)	Reusable	
Dictionary of Occupational Titles (Dept. of Labor)	1 set	20.00	Reusable	U.S. Government Printing Office, Washington, D.C. 20402
Occupational Outlook Handbook (Dept. of Labor)	1	7.00	Reusable	U.S. Government Printing Office, Washington, D.C. 20402
Computer programs to summarize data, perform analyses, and apply selection rules				To be determined
Access to data-processing services and printing facility				User agency

Frank C. Pratzner, Program Director

AVAILABILITY

At present, the major component parts of the product are in different advanced stages of development ranging from the development of data-gathering instruments to revisions following tryout. The complete product will be in final draft form and ready for publication in January 1976. Arrangements for full publication and distribution of the user's manual are yet to be finalized. The initial version of the task inventory procedures was published in March 1973 by the U.S. Government Printing Office (Washington, D.C. 20402) and is now undergoing minor revision based on the results of field tryout.

AN ANNOTATED BIBLIOGRAPHY FOR THE IMPLEMENTATION OF OCCUPATIONAL CLUSTERS

A bibliography of documents relating to 15 Office of Education occupational clusters

An Annotated Bibliography for the Implementation of Occupational Clusters is a selected bibliography of documents announced in *Resources in Education, Current Index to Journals in Education*, and *Abstracts of Instructional and Research Materials in Vocational-Technical Education* relating to the 15 U.S. Office of Education (USOE) occupational clusters. Abstracts are given with each, when available in the ERIC or AIM/ARM files.

SUBJECT AREA(S)

Occupational clusters, occupational education, and career education are the subject areas.

INTENDED USERS AND BENEFICIARIES

The intended users of this document are researchers planning additional research on occupational clusters, curriculum developers undertaking new curriculum development projects on occupational clusters, and practitioners considering implementation of education for occupational clusters.

GOAL(S) OR PURPOSE(S)

The purpose of this document is to organize ERIC and AIM/ARM literature on occupational clusters for researchers, curriculum developers, and occupational educators considering the implementation of occupational clusters in their school systems.

CAREER EDUCATION—A HUMANISTIC VIEW (PART 3 OF THE ERIC CLEARINGHOUSE ON TEACHER EDUCATION PROJECT ON CAREER EDUCATION)

A monograph examining the career education concept

This monograph examines the career education concept. Four interrelated premises discussed include specialism, sequentialism, fundamentalism, and credentialism. Each premise is presented in light of its functional and dysfunctional role in career education. Suggestions are included which would enable career education to enhance the principle of maximum possibilities in education, obliterate the distinction between work and leisure, and increase career education's concern with human services.

SUBJECT AREA(S)

Career education and the extent to which it fulfills educational needs and meets or hinders the attainment of education objectives are the focus of this publication.

INTENDED USERS AND BENEFICIARIES

Parties concerned with the career education issue are the primary users of this publication.

GOAL(S) OR PURPOSE(S)

The purpose of this monograph is to contribute to understanding of career education and its potential hazards.

CAREER EDUCATION PRODUCT INSTALLATION HANDBOOK

A resource book to increase one's ability to formulate career education product utilization strategies

The *Career Education Product Installation Handbook* (CEPIH) is part of the Diffusion of Innovations Program in the Research and Development Division of The Center for Vocational Education. The CEPIH is designed as a resource book for career education product advocates to increase their ability to formulate effective product utilization strategies. It has potential for multiplying the effectiveness of educational products by speeding up the product implementation process and facilitating more durable change in educational settings.

A seven-step procedure for installing career education products is discussed in the handbook. The steps encourage product advocates to describe products accurately, establish attainable incremental objectives, diagnose barriers to product installation, select appropriate installation tactics, and evaluate the impact of the tactics. The installation procedure assumes a product, such as a curriculum unit, is on hand, ready for use in a local school or other educational setting. The information in the handbook is designed to increase advocates' understanding of their role and the roles of others who have a voice in deciding to accept or reject an innovative career education product (the client). After the product advocate has determined the key decisionmaker to be influenced, tactics are selected which will communicate the intent of the advocate. The tactics may be informative, persuasive, or coercive, depending upon the situation and the state of knowledge of the client. The handbook is based upon an installation model which assumes interaction between the advocate and those being influenced.

SUBJECT AREA(S)

The *Career Education Product Installation Handbook* (CEPIH) is a product of several disciplines including social psychology, organizational change, innovation diffusion, rural sociology, and educational administration. More specifically, sections of the handbook address topics such as: planning an installation strategy, implementing the stragegy, and assessing the impact of the strategy.

INTENDED USERS AND BENEFICIARIES

The primary users of this handbook are career education project directors in local education agencies. Some use may be made of the handbook by State coordinators of career education as they select local project sites for the diffusion of career education. There are some preliminary indications that the handbook may have some utility as an instructional tool for upgrading skills of project directors, although this use has not been documented by the developers.

GOAL(S) OR PURPOSE(S)

The major purpose of this handbook is to assist career education advocates in the formulation of effective product installation strategies. In order to formulate an installation strategy, a handbook user must be able: (1) To describe the product accurately, (2) to diagnose barriers to the installation process, (3) to plan the strategy within time and cost constraints, (4) to select appropriate installation tactics, and (5) to evaluate the anticipated impact of the tactics on the client.

PATTERNS OF USE

The handbook is self-contained and can be used in a manner consistent with a project director's style and experience. The seven steps leading to the formulation of an installation strategy are sequential, but an experienced project director may bypass sections after becoming more familiar with the handbook. In fact, the descriptions of the tactics can be used separately if the user has accurately identified the product, profiled the client situation, understood the advocate role, planned the installation strategy, and accurately assessed the effects of the previously used tactics. The handbook is intended as an additional resource to the aids already available to the project director.

TIME REQUIREMENTS

The time required to use the handbook will vary depending upon the installation problem to be resolved and the capability of the career education advocate.

IMPLEMENTATION PROCEDURES

The handbook is self-instructional; it requires no special organizational arrangement. A slide-tape presentation designed to orient potential users to the handbook is available from the developers.

ASSURANCES AND CLAIMS

Assurances

The prototype handbook has been used in 23 field sites during the past 6 months without the active participation of the product developer; thus, it appears the product can stand alone and is transportable. Periodic telephone calls were made to the field sites as a means of collecting data on the utility of the product. No evidence of harm due to the use of the handbook was reported to the developer during these phone calls.

No evidence of racial, sexual, or other social biases in the handbook has been reported to date. The field site project directors represented persons of different sexes and racial minorities. A steering committee of national authorities and a revision committee of local career education project directors reviewed the information in the handbook without indicating any evidence of social biases.

Claims

The summative evaluation of the handbook, a simulated installation problem-solving experience for career education project directors, is scheduled for summer 1975; therefore, no claims for improving the performance of career education advocates can be substantiated at this time. However, the developers have listed tentative claims which can be supported or rejected at the conclusion of the summative evaluation. These tentative claims are:

1. Users of the handbook will gain cognitive knowledge of diffusion/installation processes, e.g., the identification of salient characteristics of innovations.
2. Users of the handbook will be able to formulate more effective installation strategies than users of other resource books. For example, handbook users should be able to select diffusion tactics which are appropriate to the problem situation.

MATERIALS AND EQUIPMENT

Required Items	Quantity Needed	Cost per Item in Dollars	Replacement Rate and Cost	Source if Different from Distributor
Career Education Product Installation Handbook (includes a procedural guide, a set of tactics, and workbook)	1 per product advocate	8.50*	All elements of Handbook are reusable except workbook; new forms needed for each strategy or product

CAREER INITIATION WHEN ALIENATION FROM SECONDARY SCHOOL OCCURS: A REVIEW OF THE LITERATURE

A synthesis of ERIC and other literature on career education programs for secondary school dropouts

A significant proportion of secondary school youths drop out of school without either completing their education or obtaining a salable skill. These youths generally constitute the hardcore unemployed unless some special programs are organized to reclaim their attention and to get them to reassume obligation for supporting themselves through work. This review synthesizes the ERIC and other literature on this topic paying particular attention to career education programs with this purpose.

SUBJECT AREA(S)

The subject areas are dropouts, the disadvantaged, tutorials, cooperative education, and career education.

INTENDED USERS AND BENEFICIARIES

The intended users of this review are practitioners considering introduction of programs to initiate youths' careers when alienation from secondary school has occurred.

GOAL(S) OR PURPOSE(S)

The purpose of this review is to organize and synthesize the literature on the difficulties involved in implementing career initiation when alienation from secondary school has occurred.

THE CONTINUING EDUCATION UNIT

A book to illustrate forms and procedures needed to implement a continuing education unit

In July 1974, the National University Extension Association (NUEA) published the final draft of *Continuing Education Unit: Criteria and Guidelines*, the product of 6 years of continuous effort of its National Task Force on the Continuing Education Unit. This publication initiated a determined effort on the part of NUEA to get countrywide acceptance of the Continuing Educational Unit (CEU). The NUEA publication only defined the CEU and told how to administer it. The process of gaining acceptance of the CEU demanded further historical and implementation data. The Illinois Community College Board, the College of Continuing Education, Northern Illinois University, Kankakee Community College, and Central YMCA Community College joined with the Educational Resources Information Center (ERIC) Clearinghouse in Career Education in providing this needed historical and implementative context which served as discussion document of a statewide conference on adoption of the CEU.

SUBJECT AREA(S)

Subject areas include noncredit postsecondary extension courses and the Continuing Education Unit (CEU).

INTENDED USERS AND BENEFICIARIES

The intended users of this publication are administrators of extension and other noncredit extension courses.

GOAL(S) OR PURPOSE(S)

The goals of this program are to explain the continuing education unit and its administration and to offer examples of forms and procedures needed in implementation of CEU.

ASSURANCES AND CLAIMS

Prior to publication, the manuscript was submitted to Paul J. Grogan, Department of Engineering, University of Wisconsin-Extension, Madison, Wisconsin 53706, and Keith E. Glaney, Director of Special Programs, The Evening College, Johns Hopkins University, Baltimore, Maryland 21218, for critical review and determination of professional competence. This publication has met such standards.

DIRECTORY OF VOCATIONAL INFORMATION RESOURCES IN THE UNITED STATES

A directory of primary vocational information resources in each State

The ERIC Clearinghouse in Vocational-Technical Education, which was merged into the ERIC Clearinghouse in Career Education in 1973, published a 1973 *Directory of Vocational Information Resources in the United States.* The directory reported the location of ERIC microfiche collections, information resources, and the computer software installations for each State. The present directory will update this information as of December 1974.

SUBJECT AREA(S)

The subject area is vocational-technical education.

INTENDED USERS AND BENEFICIARIES

The intended users of this directory are vocational and occupational educators.

GOAL(S) OR PURPOSE(S)

The purpose of this directory is to give vocational and occupational educators a current list of primary information resources in each State.

EPIE CAREER EDUCATION S*E*T* (***SELECTION AND EVALUATION TOOLS)

A two-volume guide for the selection and evaluation of career education instructional materials

EPIE Career Education is a two-volume guide for the selection and evaluation of career education instructional materials. Volume 1, *How To Select and Evaluate Career Education Instructional Materials*, explains how to detect sexist and racist content in the materials being offered for sale to schools and what strategies can be applied for countering the effects of these phenomena in the classroom. Another chapter tells how to measure the depth of career "ed'ness" within the instructional design of the materials being considered (such as, goals and objectives, scope and sequence of content, methods/activities, and provisions for student evaluation). The same chapter offers the means by which teachers can answer, "Where does my school stand on career education?" A final chapter describes the evaluation procedures through which some producers put their materials and how to evaluate their results.

Volume 2 contains detailed listings of more than 800 instructional materials, both commercially and locally developed. Materials are listed by grade level within media categories. Appendixes include a special index of developers of career education materials, an index of all materials listed in ascending grade-level order, a list of the career education coordinators from each of the 50 States, and a list of works under development.

SUBJECT AREA(S)

The selection and evaluation of career education materials.

INTENDED USERS AND BENEFICIARIES

The following potential users have been identified and asked to participate as members of an EPIE prototype panel reacting to samples of information in this document. They are career education planners who have the responsibily to purchase materials for their schools or who sit on materials selection committees which make purchasing decisions. These personnel usually are administrators, teachers, and curriculum specialists. It is foreseen, however, that guidance personnel could also make use of these listings in order to provide students with career bibliographies. Librarians in schools with career education programs could make use of these listings for purposes of updating collections in this curriculum area. Naturally students, particularly in grades 7-12 and the postsecondary range, could use this *EPIE S*E*T** as a means of providing themselves with literature on certain occupational clusters in which they have an interest.

The ultimate beneficiaries of this document are the students whose learning will be enhanced by receiving more wisely selected and more sensitively employed instructional materials.

GOAL(S) OR PURPOSE(S)

The individuals using *EPIE Career Education S*E*T** as a source of information when selecting and evaluating materials for career education programs will be able to measurably perceive a change in their approach when considering materials for purchase; they will be more sensitive to the needs of their minority students; they will be more sensitive to the sex role stereotyping which permeates the majority of available materials; they will be more sensitive to the value of various kinds of evaluation procedures (if any) through which producers put their materials; and they will be able to make wiser, more sensitive purchasing decisions.

PATTERNS OF USE

*EPIE Career Education S*E*T** can be used by individuals charged with the responsibility of ordering instructional materials, or it may be used by selection committees—a form of materials selection and evaluation which EPIE encourages. These committees can consist of administrators, teachers, students, parents, school board members, and other members of the community interested in the upgrading of instructional materials in local schools. The *EPIE S*E*T** can also be used by individual students who are searching for information on one or several occupational clusters, specific professions, and/or occupations. It could also be used by dropouts and even inmates of penal institutions as a similar resource.

ASSESSMENT PROVISIONS

Since this is not instructional material as such; no assessment or evaluation provisions have been made. Followup and feedback which EPIE uses to evaluate all its information products will be used for updating this document.

TIME REQUIREMENTS

Time is not a consideration for *EPIE Career Education S*E*T**.

IMPLEMENTATION PROCEDURES

No special procedures or training are required to make the value of this document operational. Although it is not so designed, it could easily be used as a text for a course or workshop in the selection and evaluation of instructional material.

MATERIALS AND EQUIPMENT

The cost of materials has not been determined.

ASSURANCES AND CLAIMS

Assurances

Parts of this product have been given to two separate prototype panels for reaction prior to completion. Their reactions to the usability of the *EPIE S*E*T** were extremely positive for the most part. Questions were raised concerning the assignment of each material to a curriculum role, which in the main was "supplementary for career education." Most of the questions centered around the lack of specificity of this designation. All such questions are valid, since most career education programs in schools are still supplementary to other curriculum areas; therefore, only a few materials carried the curriculum role of "basic for career education programs." As schools adopt career education as the contextual backdrop for the major curriculum areas, the materials developed for such programs will naturally bear more specific roles. Ease of access and usefulness of information in this document have been highly rated by panel members.

This product is free of sexual or racial stereotyping. Indeed, the *EPIE S*E*T** instructs users on how to detect such stereotyping in the materials they are considering for purchase and use. The product offers strategies for countering the effects of such stereotyping in the classroom.

Claims

There are no user data at this time to support any claims for the success of this product. However, a feedback mechanism is being designed as part of this document which will supply data beginning as early as June 1975 and last through the market life of the *EPIE Career Education S*E*T**. These data will be used to improve the quality of any updating volumes EPIE may undertake.

IMPLEMENTATION OF OCCUPATIONAL CLUSTER CONCEPTS

A narrative pertaining to the organizing and synthesizing of literature on occupational clusters

A synthesis of documents announced in *Resources in Education*, *Current Index to Journals in Education*, and *Abstracts of Instructional and Research Materials in Vocational-Technical Education* relating to the 15 USOE occupational clusters. This is the narrative which organizes the content of the previously released *Annotated Bibliography for the Implementation of Occupational Clusters*.

SUBJECT AREA(S)

The subject areas are occupational clusters, occupational education, and career education.

INTENDED USERS AND BENEFICIARIES

The intended users of this document are researchers planning additional research on occupational clusters, curriculum developers undertaking new curriculum development projects on occupational clusters, and practitioners considering implementation of education for occupational clusters.

GOAL(S) OR PURPOSE(S)

The purpose of this document is to organize and synthesize conclusions of the ERIC and AIM/ARM literature on occupational clusters for researchers, curriculum developers, and occupational educators considering the implementation of occupational clusters in their school systems.

THE ROLES OF THE TEACHER, THE COUNSELOR, THE COMMUNITY AND MEDIA IN CAREER GUIDANCE AND CAREER EDUCATION: A CONCEPTUAL MODEL

A document synthesizing ERIC and other literature on roles of teacher, counselor, community, and media in career education programs

Teacher, counselor, community, and media are all necessary participants in the career education of students. This document will synthesize ERIC and other literature on the necessary roles of each of these participants in successful programs of career education. A model will be derived from these role statements.

SUBJECT AREA(S)

The subject areas are teaching, counseling, education and work, career guidance, career education, and computers and other media in career guidance.

INTENDED USERS AND BENEFICIARIES

The intended users of this document are educational practitioners and career educators.

GOAL(S) OR PURPOSE(S)

The goal of this document is to offer a model of the relationship among teacher, counselor, community, and media which must exist in order for career education to work.

STRENGTHENING THE RELATIONSHIP OF EDUCATION AND WORK

A synthesis of ERIC and other literature on education and work

In August 1974, President Ford announced his intention, at the Ohio State University graduation, to strengthen the relationship of education and work. The President subsequently ordered his Secretaries of Commerce, Health Education and Welfare, and Labor to recommend ways in which the Federal government could facilitate such a strengthening. The Secretaries reported in late December 1974. ERIC was subsequently asked to organize its literature on this subject. Since education and work are within the scope of the ERIC Clearinghouse in Career Education, the recovery and synthesis of literature on this topic has been assigned to this Clearinghouse.

SUBJECT AREA(S)

The subject areas are education and work, cooperative education, work experience programs, and placement.

INTENDED USERS AND BENEFICIARIES

The intended users of this document are vocational, occupational, and technical educators; community college educators; and businessmen.

GOAL(S) OR PURPOSE(S)

The purpose of this publication is to provide a synthesis of the ERIC and other literature on education and work.

CAREERS IN TECHNOLOGY

A guide to acquaint students in grades 2-4 with machines and the concept of technology

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of this guide is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, learning activities, and some suggestions for evaluation-summary programs.

The basic purpose of this teacher's guide is to acquaint primary grade students with the variety of jobs in the field of technology. This teacher's guide proceeds from the premise that nothing has had a more profound effect on the goods and services component of our country in the last few decades than technology. The field of technology encompasses all work which uses machines to supply the needs of people. Machines not only contribute to the speed and efficiency of production, but they also make work much easier.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies and mathematics.

The topics covered in this guide are: Simple machines, technological jobs in the community, making accurate measurements, tools used for measurement, preparation related to technological jobs, the use of mathematics in technological jobs, job specialization and the assembly line, a visit to a technological site, and working conditions.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 2-4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Identify the tools and six simple machines and be able to name the occupation of a person who uses each machine; (2) become aware of and acquire knowledge of various technological jobs and careers that are necessary to a community through direct observation and classroom discussion of these jobs, recognizing the interdependency of community functions and roles; (3) recognize by observation and class activity that many technological jobs require accuracy and efficiency in measurement, and identify the unit of measurement used in technological jobs; (4) become familiar with and know the function of measuring tools and be able to associate specific measuring tools with specific technological jobs; (5) develop an understanding of how the school-related disciplines of mathematics, science, communications, and art are used in some jobs and the type of education required for different careers; (6) recognize division of labor in the manufacturing process by observing the working conditions on an assembly line; and (7) recognize that work locations and working conditions differ and understand the implications of automation for workers of the future.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

RD 070 001

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

EXPLORING THE WORLD OF WORK

A guide to acquaint students in grades 2 and 3 with occupational areas

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The guides relating to this theme can be categorized as those that focus on career awareness and exploration of specific careers in the work world and those that concentrate on concepts and terms like worker roles, production methods, work habits and performance standards, production, management, goods and services, and worker satisfaction.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are social studies, art, and language arts.

The topics covered in this program are an introduction to the world of work, goods-producing occupations and service occupations, occupational areas and specialization, preparation for occupations, meeting personal needs through work, lifestyles in occupations, occupations that help meet community needs, volunteer programs, and jobs unique to a given geographic area.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 2 and 3.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Become familiar with goods-producing occupations and service occupations; (2) be able to make distinctions between different types of occupations; (3) be able to describe specialized jobs within each of these areas; (4) be able to identify the importance of school tasks and other kinds of training as preparation for the world of work; (5) be able to identify personal needs and the way these are met through work; (6) be aware of the importance of work as a determinant of lifestyle; (7) identify community needs and how these are met by community workers; (8) be able to define the concept of "volunteer" and identify some of the services provided by volunteers; and (9) be able to identify occupations specific to a given geographic area as a means of increasing students' understanding of the influence of geographic conditions on occupations.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

CAREER EDUCATION CONCEPT LESSON CARDS

A program to provide career awareness to students in grades K-6

The *Career Education Concept Lesson Cards* provide a basic career awareness program for students in kindergarten through grade 6. The K-6 program is organized around "Who Am I?," "To Develop an Awareness of Others," and "To Develop an Awareness of Others and Occupations."

Teachers write lessons, implement them in the classroom, and evaluate and revise these instructional curriculum modules.

These lessons encompass classroom learning activities and projects, the use of audiovisual materials, and field trips into the community; they also provide for guest speakers and community visitors to visit the classroom. Parents and other community members can be used as classroom aides and trip chaperones.

The community is looked upon as a classroom, and the product uses both natural and social life-space phenomena for instructional purposes. The career education lessons enable students to be active participants in their education.

SUBJECT AREA(S)

The subject area of this product is career education.

INTENDED USERS AND BENEFICIARIES

The K-6 program is immediately applicable to those students who attend Union 58 schools in Groveton, Stark, and Stratford, New Hampshire.

Teachers are directly involved in writing lessons and introducing them into the classroom. The lessons are student oriented and directly involve students in the awareness/learning process regarding the world of work.

The scope of the program is to affect student awareness and attitudes of students of all abilities in Union 58, grades K-6.

GOAL(S) OR PURPOSE(S)

The purposes of the program are: (1) To expose students to a variety of occupations, (2) to enable students to investigate different occupations and learn more about them, and (3) to enable students to better understand the training and skills necessary to do a particular job.

PATTERNS OF USE

The organizational pattern of the lessons provides for specific concepts and occupations to be treated in grade groupings. The lessons are organized on a grade-grouping basis to enable them to be evaluated, revised, and rearranged without seriously affecting the structure of the K-6 program.

As developed in K-6, the lessons apply to several subject matter areas (e.g., social studies, science, language arts, and mathematics) and can be infused into these courses of study without drastically altering the established curriculum.

The lessons can be used at three different stages of instructional development:

(1) Introductory Phase—This introduces a lesson or unit in a particular subject matter area.

(2) Integration—The career education lesson is infused into the subject matter content and becomes part of the course of study and activities.

(3) Culminating Phase—The lesson can be used as a culminating activity as part of a subject matter course of study.

ASSESSMENT PROVISIONS

Initially, the component coordinator met with K-6 teachers to outline the concept lesson format. Working with teachers in the classroom, the coordinator assisted teachers in developing their own lessons. Teachers introduced the lessons into their classrooms and evaluated them (on the enclosed evaluation form). The coordinator observed many lessons in classrooms.

TIME REQUIREMENTS

Each lesson card contains a statement of time required to develop the instructional activity. The time required to develop a lesson varies with each lesson.

IMPLEMENTATION PROCEDURES

Instructional materials (filmstrips, self-awareness kits, and magazines) have been purchased from several commercial publishers.

The average classroom teacher without special training can prepare lessons which relate to different subject matter areas.

The infusion of career education lessons into the existing curriculums does not require extensive organizational or scheduling changes. Developed career education lessons can be implemented in the classroom and/or community.

MATERIALS AND EQUIPMENT

Each career education concept lesson suggests several different types of materials and instructional activities that can be used.

RD 070 003

The individual teacher has the option to use whichever materials wanted in order to develop the lesson. There is no set pattern of lesson development. Using this approach, the career education lessons can be implemented in most, if not all, classrooms in a given school setting.

ASSURANCES AND CLAIMS

The ESP project staff and Union 58 classroom teachers have developed K-6 career education lessons for the purpose of exposing students to a wide variety of occupations and increasing student awareness of the world of work. Teachers have introduced lessons into their classroom curriculums and have provided feedback regarding the purpose and value of the lessons. The Union 58 ESP's level I evaluator has been involved in developing the feedback form and is currently conducting career awareness and maturity inventory testing in classrooms. To date, there are not sufficient data to allow this project to make any assurances of harmlessness.

The Union 58 ESP *Career Education Concept Lesson Cards* have been produced by the project staff and classroom teachers with all students in mind. There has not been any intention to develop a sexist program. Both boys and girls are involved in lesson activities.

As developed, the concept lessons could be replicated or transported to other sites and infused into the classroom curriculum.

There are not sufficient data available at this time to enable the Union 58 ESP project to make any claims of effectiveness, social fairness, or product development.

DEVELOPER/AUTHOR:

New Hampshire School Supervisory Union 58
Experimental Schools Program
Groveton, N.H. 03582

Richard Peters, Project Director
Paul Hawley, Coordinator
Union 58 Teachers

AVAILABILITY

The original intention of the Union 58 ESP project was to develop a comprehensive and integrated K-12 career education program for students in Groveton, Stark; and Stratford, New Hampshire. This is still the project's prime mission. Only within the past few months have the project personnel and classroom teachers been able to develop a product tailored to local abilities and needs. At this time, the Union 58 project has no plans to publish.

The development of the career education concept lesson program for K-6, as well as for grades 7-12, is an ongoing process which involves development, implementation, evaluation, and revision.

The product has not been copyrighted. Samples of the developed lessons are available from the New Hampshire School Supervisory Union 58 Experimental Schools Program project:

BASIC MEASUREMENT AND RELATED CAREERS: A

Material for kindergarten children on topics of time, weight, money, and length

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The four *Basic Measurement and Related Careers* guides were developed for students in early and late primary grades. They focus on the basic concepts of measurement and on developing measurement skills in the early grades; they progress from understanding the concept of measurement by comparison to developing basic volume measurement skills. Students examine the use of these skills in the work world.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is mathematics.

The topics covered in this guide are: Time, weight, money, length estimation, and length measurement.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in kindergarten.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts. The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Estimate short time spans, begin learning to read a clock by identifying activities that are performed at certain times, and understand that people organize their activities around time; (2) compare relative weights of objects, determine how much weight an object will support, and identify situations in which workers might apply these concepts; (3) understand that money is a medium of exchange, recognize three coins and understand their relative values, learn what certain items cost, and identify work situations in which money measurement is necessary; and (4) compare relative lengths of objects, sequence objects by length, recognize the practical value of length estimates, make length estimates, and identify situations in which workers might make length estimates.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

RD 070 004

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

BASIC MEASUREMENT AND RELATED CAREERS: B

RD 070 005

Topics for 1st graders including measuring, time, weight, money, length, and volume

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The four *Basic Measurement and Related Careers* guides were developed for students in early and late primary grades. They focus on the basic concepts of measurement and on developing measurement skills in the early grades. In addition, they progress from understanding the concept of measurement by comparison to developing basic volume measurement skills. Students examine the use of these skills in the work world.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is mathematics.

The topics covered in this guide are: Measuring time, weight, money, length, liquid volume, and temperature.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grade 1.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this program will: (1) Explore ways in which people use time measurement skills in work and everyday living and begin learning to read a clock and (2) recognize the relationship between similar school and work experiences by developing skills in weight, money, length, liquid volume, and temperature measurement through discovering how people use the same skills in work.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

BASIC MEASUREMENT AND RELATED CAREERS: C

A teacher's guide for teaching 3d- and 4th-graders to relate measurement skills to work experiences

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The four *Basic Measurement and Related Careers* guides were developed for students in early and late primary grades. They focus on the basic concepts of measurement and on developing measurement skills in the early grades. In addition, they progress from understanding the concept of measurement by comparison to developing basic volume measurement skills. Students examine the use of these skills in the work world.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is mathematics.

The topics covered in this guide are: Examining measurement tools and their relationship to work by using estimation, length measurement, and area measurement in work situations; and applying measurement skills.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 3 and 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Recognize the need for and use of standardized measurement tools and become aware of their use in the world of work, (2) be able to use estimation skills as a means of developing competencies required for the world of work, (3) be able to use basic length and area measurement skills as a means of developing competencies required for the world of work, and (4) use measurement tools and skills in a simulated work experience.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

BASIC MEASUREMENT AND RELATED CAREERS: D

A teacher's guide for teaching 3d- and 4th-graders to measure solid and liquid volume

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains a student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

The four *Basic Measurement and Related Careers* guides were developed for students in early and late primary grades. They focus on the basic concepts of measurement and on developing measurement skills in the early grades. In addition, they progress from understanding the concept of measurement by comparison to developing basic volume measurement skills. Students examine the use of these skills in the work world.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is mathematics.

The topic covered in this guide is measuring liquid volume and solid volume.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 3 and 4.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: Identify units of solid and liquid volume measurement, determine equivalent units, begin understanding conservation of liquid volume, identify workers who measure liquid volume, and demonstrate the measurements.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

CAREERS IN VISUAL ART

A guide to acquaint students in grades 4-6 with some great achievements in fine art

With the foundation provided by the *Comprehensive Career Education School Based Model*, this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

This set of learning experiences acquaints intermediate-level students with some of humanity's great achievements in the fine arts. With heightened perception, the students observe possibilities for artistic expression in their immediate environments. They explore a variety of careers in the graphic arts; and as a result, they become aware of the tools, materials, and equipment, as well as the skills needed to utilize them. Through group activities in the graphic arts, the students see the advantages of cooperation and develop an understanding of decisionmaking and problem solving.

SUBJECT AREA(S)

The subject area for which the materials in this guide have potential is art.

The topics covered in this guide are: An introduction to visual arts, art all around us, variety of careers in art, cultural and environmental influences in art, art as a cooperative effort, tools and materials used by artists, the skillful use of art equipment, skills related to job success, working conditions in the field of art, and lifestyle and rewards associated with the visual arts.

INTENDED USERS AND BENEFICIARIES

The materials in this program were developed for students in grades 4 - 6.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Become acquainted with works representative of the major categories of graphic art (painting, sculpture, architecture, design, and photography); (2) achieve heightened visual perception and develop both an awareness and sensitivity to all that is artistic in their immediate environment and in their everyday world; (3) investigate certain occupations in graphic arts by talking with persons actively employed in jobs using artistic ability; (4) acquire an understanding of their own cultural heritage as expressed in art and appreciate the contribution of various ethnic groups; (5) participate in group arts-related activities for the purpose of learning to recognize and appreciate the interdependence of all contributors to a successful art project; (6) understand the wide variety of tools, materials, and equipment used by workers in graphic arts-related occupations; (7) be able to use the necessary tools and demonstrate some of the skills or techniques required of an artist; (8) develop an awareness that working conditions affect the productivity of people in arts-related jobs as well as experience different working conditions for themselves; and (9) recognize that there are certain conditions inherent in art careers that may affect the lifestyle of the artist, and identify the tangible and intangible career rewards.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. CAREER EXPLORATION IN EARTH SCIENCES

A guide to introduce students (grade 8) to the earth sciences

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration. The guide consists of sets of learning experiences for students that focus on various elements of education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

This teacher's guide acquaints intermediate-grade level students with occupations in the earth sciences. By identifying earth science and involving students in an exploration of the areas of geology, meteorology, and oceanography, students may become aware of the knowledge and skill required of workers in these occupations. An important aim of this guide is to involve students in the learning process by providing "hands-on" experience.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are geology, meteorology, and oceanography.

The topics covered in this guide are: Earth science; geology—the study of rocks; geology—investigating minerals and fossils; geology—forces that alter the earth's surface; meteorology—an area of earth science; oceanography—an area of earth science; and interaction among earth science occupations.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grade 8.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The student completing the learning sets in this program will: (1) Identify the earth sciences and investigate occupations in geology, meteorology, and oceanography; (2) investigate the origin and composition of rocks and simulate activity of geologists and workers in related occupations as a basis for realizing how geologists interact with other workers; (3) examine minerals and fossils and identify the basis of their classification as a means of understanding how the methods of earth scientists can be used to solve practical problems; (4) identify and investigate some forces that alter the earth's surface as an aid to understanding the work done by soil scientists; (5) identify the science of meteorology and related occupations and conduct experiments with self-made instruments as a basis for understanding the elements of weather and weather forecasting; (6) identify the scope of oceanography, the properties of sea water, and some oceanographic instruments in order to realize how and why scientists study the oceans; and (7) differentiate between hypothesis and theory and investigate the "Theory of Continental Drift" as a basis for understanding how earth scientists cooperate in formulating a theory.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.

TIME REQUIREMENTS

In keeping with the premise of variability among classes, the teacher's guide suggests that time limits be set by the teacher.

RD 070 009

IMPLEMENTATION PROCEDURES

In the explanation of format and introduction of each learning set, guidelines offer direction to the teacher. In most cases, this orientation is sufficient explanation for the teacher's use of the materials. The methods and strategies used are those within the repertoire of most teachers.

Use of the materials by some teachers will improve with an orientation as to the purpose and objectives of career education. Teachers may wish to review some methods and strategies with which they feel uncomfortable.

ASSURANCES AND CLAIMS

Originally the center contracted with six local educational sites to develop career education materials for grades K-12. Working with the site personnel, the center developed a matrix as a foundation for curriculum materials. The curriculum products that followed went through a series of pilot testing and revision experiences coordinated by the center.

The teacher's guides referred to in this catalog were developed from the original products that were field tested in several geographical areas and with students from a variety of economic backgrounds. Information concerning the field tests of the original materials is available from the developer.

After field testing by students, teachers, and professional staffs, the original products were revised and/or rewritten to reflect field test data. This effort included a review of sex and racial biases in the materials. Consequently, the materials appear to display no social bias; they may be adapted to special needs and interests of students; they are transportable; and they are based on both practical and theoretical considerations.

CAREER EXPLORATION IN THE LIFE SCIENCES

A guide to acquaint students in grades 7-9 with ecology, zoology, and medicine

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

This guide familiarizes intermediate-grade students with those occupations in the life sciences. By identifying life science and exploring the areas of biology—ecology, zoology, and medicine—students may become aware of the functions of life scientists in these fields and the value of their work.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are: Ecology, medicine, zoology, and biology.

The topics covered in this guide include: Biology (ecology), biology (zoology), medicine, and a definition of life science.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grades 7-9.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Identify the scope of life science and the three basic fields of agriculture, biology, and medicine in order to become aware of the variety of life science occupations; (2) identify the life science of ecology and the factors affecting the environment as a basis for understanding the function of ecologists and people in related occupations; (3) investigate animal life as a means of learning the functions of zoologists and the value of work in this area of life science; and (4) identify life scientists who are concerned with the cause and cure of diseases and disorders of the human body, and become aware of the functions of these life scientists.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

CAREER EXPLORATION IN THE PHYSICAL SCIENCES

A guide to acquaint 9th-graders with chemistry, physics, geology, metallurgy, and general science

With the foundation provided by the *Comprehensive Career Education School Based Model,* this teacher's guide is one of those developed to provide teachers with exemplary career education curriculum materials for grades K-12. The theme of the guidebook is career awareness and exploration.

The guide consists of sets of learning experiences for students that focus on various elements of career education, including beginning competency and skills. Each learning set in the guide contains the student's objective, an overview, a resource list, the teacher's preparation tasks, the learning activities, and some suggestions for evaluation-summary programs.

This guide acquaints secondary students with the areas of physical science and those occupations associated with that area of study. By exploring some of the basic concepts of chemistry, physics, metallurgy, and geology, students gain insight into the knowledge and skills required of those in occupations related to the physical sciences.

SUBJECT AREA(S)

Subject areas for which the materials in this guide have potential are: Chemistry, physics, geology, metallurgy, and general science.

The topics covered in this guide are: Nature of physical sciences, measurement tools, physics—an area of physical science, chemistry—an area of physical science, metallurgy—an area of physical science, geology—an area of physical science, and interaction of workers in the physical sciences.

INTENDED USERS AND BENEFICIARIES

The materials in this guide were developed for students in grade 9.

Potential users of career education teacher's guides are teachers in grades K-12. Other possible users are teacher educators in colleges and universities, staff development personnel in schools, and personnel in State departments of education.

The ultimate beneficiaries are the students who will be influenced by the creative activities and career education concepts.

The learning experiences are adaptable to multigrade groupings and the open classroom.

GOAL(S) OR PURPOSE(S)

The students completing the learning sets in this guide will: (1) Identify the scope of physical science and the areas within it as a means of understanding the functions of people in physical science occupations, (2) identify the uses of various measurement tools of physical scientists and the skills required in their use as a means of recognizing the criteria used in selecting the appropriate tool for a given measurement, (3) examine some basic principles of physics and conduct-related experiments to understand how theoretical principles may be applied in the world of work, (4) examine the properties of various materials and conduct experiments in chemical reactions as a means of understanding bases for classifying matter, (5) identify the two basic areas of metallurgy and conduct related experiments in order to understand the functions of metallurgists, (6) investigate the origin and composition of rocks and minerals and the forces altering the earth's surface as a basis for understanding the functions of various geologists, and (7) perform simulated activities of geologists and those in related occupations as a basis for realizing how physical scientists interact with each other and with other workers in work situations.

PATTERNS OF USE

The teacher will find activities adaptable to a variety of classroom settings; some optional activities involve students in community locations. In addition, these materials can supplement others or can be used as a complete unit of study. The teacher's guide explains its format but urges the teacher to consider modification when student needs, interests, and learning abilities necessitate change. Student objectives and the order of presenting the sets can be modified; the teacher can be selective in the choice of activities and approach to assessment.

ASSESSMENT PROVISIONS

In the explanation of format, the guide describes its approach to evaluation of students. Each learning set provides several options for assessment, including specific exercises to measure learning. When concepts treated are subject to individual interpretation, the teacher is asked to consider recording observations of student learning and growth. The suggestion is made that the teacher allow students to evaluate, review, explain, and critique their own work at various stages.
